Volume 1

List of Contributors *xi*

Preface *xiii*

Part I Introduction 1

1 Metal Oxides and Specific Functional Properties at the Nanoscale 3

Oliver Diwald

2 Application of Metal Oxide Nanoparticles and their Economic Impact 29

Karl-Heinz Haas

Part II Particle Synthesis: Principles of Selected Bottom-up Strategies 67

3 Nanoparticle Synthesis in the Gas Phase 69

Matthias Niedermaier, Thomas Schwab, and Oliver Diwald

4 Liquid-Phase Synthesis of Metal Oxide Nanoparticles 109

Andrea Feinle and Nicola Hüsing

5 Controlled Impurity Admixture: From Doped Systems to Composites 151

Alessandro Lauria and Markus Niederberger

Part III Nanoparticle Formulation: A Selection of Processing and Application Routes 185

6 Colloidal Processing 187

Thomas Berger

- 7 Fabrication of Metal Oxide Nanostructures by Materials Printing 229**
Petr Dzik, Michal Veselý, and Oliver Diwald

- 8 Nanoscale Sintering 271**
Kathy Lu and Kaijie Ning

Part IV Metal Oxide Nanoparticle Characterization at Different Length Scales 303

- 9 Structure: Scattering Techniques 305**
Günther J. Redhammer

- 10 Morphology, Structure, and Chemical Composition: Transmission Electron Microscopy and Elemental Analysis 349**
Joanna Grybos', Paulina Indyka, and Zbigniew Sojka

- 11 Electronic and Chemical Properties: X-Ray Absorption and Photoemission 383**
Paolo Dolcet and Silvia Gross

Volume 2

List of Contributors xiii

Preface xv

- 12 Optical Properties: UV/Vis Diffuse Reflectance Spectroscopy and Photoluminescence 435**

Thomas Berger and Annette Trunschke

- 12.1 Interaction of Metal Oxide Particle-Based Materials with Light 435
- 12.2 Spectroscopic Techniques 439
- 12.2.1 Transmission Spectroscopy 439
- 12.2.2 Diffuse Reflectance Spectroscopy 441
- 12.2.2.1 Kubelka–Munk Theory 441
- 12.2.2.2 Measurement of Absorption Spectra in Diffuse Reflectance 442
- 12.2.2.3 Experimental Limitations and Sources of Error 443
- 12.2.2.4 Optical Accessories 444
- 12.2.3 Photoluminescence Spectroscopy 445
- 12.2.3.1 Principles of Photoluminescence Spectroscopy 445
- 12.2.3.2 Inorganic Luminescent Particles 447
- 12.2.4 *In Situ* Cells and Measurement Configurations 449
- 12.3 Types of Transitions 452
- 12.3.1 UV Region (5.0–2.5 eV) 453
- 12.3.1.1 Charge Transfer (CT) Transitions 454
- 12.3.1.2 Band-to-Band Transitions 454
- 12.3.1.3 Excitonic Surface States in Highly Dispersed Insulating Metal Oxides 455
- 12.3.1.4 Organic Ligands and Adsorbates 456
- 12.3.2 Visible Region (3.5–1.5 eV) 457
- 12.3.2.1 Metal Centered Transitions 457

12.3.2.2	Localized Surface Plasmon Resonance	457
12.3.3	Near-Infrared Region (1.5–0.5 nm)	458
12.3.3.1	Intraband Transitions: Free Carrier Absorption	458
12.3.3.2	Vibrational Transitions	458
12.3.3.3	Localized Surface Plasmon Resonance in Degenerately Doped Metal Oxide Semiconductor Nanocrystals	459
12.4	Case Studies	459
12.4.1	Heterogeneous Catalysis	459
12.4.2	Adsorption and Reaction of Porphyrins on Highly Dispersed MgO Nanocube Powders	465
	Nomenclature	471
	List of Abbreviations	472
	References	473
13	Vibrational Spectroscopies	483
	<i>Christian Hess</i>	
13.1	Introduction	483
13.2	Basic Principles of Vibrational Spectroscopies	485
13.2.1	IR Spectroscopy	485
13.2.2	Raman Spectroscopy	486
13.2.3	Inelastic Neutron Scattering (INS)	487
13.2.4	In Situ/Operando Characterization	487
13.3	Vibrational Properties of Metal Oxide Nanoparticles	488
13.3.1	Structural Identification and Phase Transitions	489
13.3.2	Particle Size	489
13.3.3	Strain and Defects	491
13.3.4	Surface Hydroxyl Groups	492
13.3.5	Surface Oxygen Species	493
13.4	Case Study: Ceria Nanoparticles	493
13.5	Characterization of Metal Oxide Nanoparticles Under Working Conditions	500
13.6	Conclusions	504
	Acknowledgements	505
	List of Abbreviations	505
	References	506
14	Solid State Magnetic Resonance Spectroscopy of Metal Oxide Nanoparticles	513
	<i>Martin Hartmann and Yamini S. Avadhut</i>	
14.1	Introduction	513
14.2	Basics of Solid-state NMR Spectroscopy	514
14.2.1	Magic Angle Spinning	515
14.2.2	Cross-Polarization	517
14.2.3	Multiple Quantum Magic Angle Spinning	518
14.3	Selected NMR Examples	520
14.4	Basics of Electron Paramagnetic Resonance Spectroscopy	531
14.4.1	The Spin Hamiltonian of Paramagnetic Systems	532
14.4.2	Defects	537

14.4.3	Transition Metal Ions	539
14.5	Selected EPR Examples	539
	References	550
15	Characterization of Surfaces and Interfaces	557
	<i>Thomas Berger and Oliver Diwald</i>	
15.1	Interfaces Determine Stability and Functional Properties: From Manufactured Metal Oxide Nanoparticles to Surface Science Studies	557
15.2	From Crystal Faces to Nanocrystals: Surface Energetics and Wulff Constructions	559
15.2.1	Surface Tension, Surface Stress, and Surface Energy	559
15.2.2	Wulff Construction: A Starting Point for Modelling	561
15.2.3	Free Energies of Particle Formation and Particle Surfaces	562
15.3	Changing Interfaces and Microstructures	562
15.4	The Solid–Vacuum Interface	564
15.5	Solid–Vapor Interfaces: Thin Water Films as Reactive Environments	564
15.6	Solid–Liquid Interfaces	566
15.7	Solid–Solid Interfaces	567
15.7.1	Strategies to achieve Grain Size Stabilization	568
15.8	Experimental Approaches for Surface and Interface Characterization	570
15.8.1	Gas Adsorption	570
15.8.2	He Pycnometry	574
15.8.3	Nonlinear Optics and Surface Specific Optical Probes	574
15.8.4	Atomic Force Microscopy (AFM)	576
15.8.5	Zeta Potential and Surface Potential	578
15.8.6	Surface and Interface Energies	580
	Nomenclature for Chapters 15 and 16	584
	List of Abbreviations	585
	References	586
16	Adsorption and Chemical Reactivity	593
	<i>Oliver Diwald and Martin Hartmann</i>	
16.1	Introduction	593
16.2	Some Principles and Key Issues of Adsorption	594
16.2.1	Physisorption, Chemisorption, and Potential Energy Diagrams	594
16.2.2	Sticking Probability, Surface Residence Time, and Adsorption Isotherms	597
16.3	Adsorption in Metal Oxide Nanoparticle Ensembles	603
16.3.1	Microstructure and Porosity	603
16.3.2	Adsorption and Diffusion	606
16.4	Thermal Techniques to Characterize Sorption	608
16.4.1	Thermogravimetric Analysis (TGA)	609
16.4.2	Differential Thermal Analysis (DTA)	609
16.4.3	Differential Scanning Calorimetry (DSC)	609
16.4.4	Calorimetry	610
16.5	Temperature-Programmed Techniques (TPD, TPR, TPO, TPSR)	612
16.5.1	Temperature-Programmed Desorption (TPD)	612
16.5.2	Temperature-Programmed Reduction (TPR) and Oxidation (TPO)	613
16.5.3	Temperature-Programmed Surface Reaction (TPSR)	614
16.6	Adsorption in Liquids – Nanoparticle Dispersions	614

16.6.1	General Aspects of Adsorption in Solution	614
16.6.2	Adsorption and Exchange of Ligands at the Colloidal Interface	616
16.6.3	Grafting of Metal Oxide Nanoparticles with Surfactants	618
16.7	Nature and Abundance of Catalytically Active Centers	619
16.8	Probes to Characterize Strength and Activity of Catalytic Sites	622
16.9	Catalytic Test Reactions	623
16.9.1	Acidic and Basic Catalysts	623
16.9.2	Redox Reactions	625
16.9.3	Bifunctional Catalysis	626
16.10	Stability and Aging of Metal Oxide Nanoparticles in Catalysis	627
	Nomenclature	628
	List of Abbreviations	629
	References	630
17	Particle Characterization Technology	637
	<i>Alfred P. Weber and Annett Wollmann</i>	
17.1	Introduction	637
17.2	Sampling and Sample Preparation	638
17.2.1	Sampling	638
17.2.2	Sampling from the Gas Phase	639
17.2.3	Sampling from a Suspension and Sample Preparation	641
17.3	Image Analysis Techniques	642
17.3.1	Point operations	643
17.3.2	Linear Filter	643
17.3.3	Nonlinear Filter	644
17.3.4	Morphological Filtering	644
17.4	Counting Techniques for Single Suspended Nanoparticles	644
17.4.1	Wide Angle Laser Light Collector	644
17.4.2	Nano-Laser Doppler Anemometry (NanoLDA)	645
17.4.3	Condensation Particle Counter (CPC)	645
17.4.4	Nanoparticle Tracking Analysis (NTA)	647
17.4.5	Comparison of NTA and Dynamic Light Scattering (DLS)	648
17.5	Separation Techniques	649
17.5.1	Field-Flow-Fractionation (FFF)	649
17.5.2	Analytical Ultracentrifugation	650
17.5.3	Differential Mobility Analyzer (DMA)	651
17.5.4	Low Pressure Impactor (LPI)	652
17.6	Multiparametric Particle Characterization	655
17.6.1	Aerosol Photoemission Spectroscopy (APES)	655
17.6.2	Multidimensional NTA on Nanosuspensions	658
17.6.3	Hyphenated Inductively Coupled Plasma Mass Spectrometry (ICP-MS)	660
17.7	Summary	663
	Acknowledgments	664
	Nomenclature	664
	List of Abbreviations	666
	References	667

Part V Characterization of Metal Oxide Nanoparticles with Modelling 673

18 Atomistic Modeling of Oxide Nanoparticles 675

Keith McKenna

- 18.1 Introduction 675
- 18.2 Methods 676
 - 18.2.1 Interatomic Potentials 676
 - 18.2.2 First Principles Methods 677
 - 18.2.3 QM/MM (or Embedded Cluster) Methods 679
- 18.3 Structure of Nanoparticles 680
 - 18.3.1 Kinetic vs. Thermodynamic Approaches 680
 - 18.3.2 0D, 1D, 2D, and 3D Defects in Nanoparticles 682
 - 18.3.3 Interfaces Between Nanoparticles 682
- 18.4 Electronic Properties 684
 - 18.4.1 Density of States 684
 - 18.4.2 Ionization Energies and Electron Affinities 685
 - 18.4.3 Optical Absorption Spectra 686
 - 18.4.4 Electron Paramagnetic Resonance 687
- 18.5 Summary 688
- Acknowledgement 688
- References 689

19 Modeling of Reactions at Oxide Surfaces 693

Henrik Grönbeck

- 19.1 Introduction 693
- 19.2 Computational Considerations 694
 - 19.2.1 First Principles Calculations 695
 - 19.2.2 *Ab Initio* Thermodynamics 697
 - 19.2.3 Kinetic Modeling of Surface Reactions 698
- 19.3 Some Features of Reactions on Metal Oxide Surfaces 699
- 19.4 Adsorbate Pairing 699
 - 19.4.1 Cooperative Adsorption 699
 - 19.4.2 Effects of Electronic-Pairing in Modeling of Surface Reactions 701
 - 19.4.3 Kinetic Modeling of Reactions at Oxide Surfaces 702
 - 19.4.4 Trans-Ligand Effects 705
- 19.5 Reactions at Nanoparticles 706
 - 19.5.1 Trends in Adsorption Properties 707
- 19.6 Conclusions 708
- Acknowledgments 708
- References 708

20 Mesoscale Modelling of Nanoparticle Formation 711

Eirini Goudeli

- 20.1 Introduction 711
- 20.2 Nanoparticle Characterization 712
 - 20.2.1 Agglomerate Radii 712

20.2.2	Fractal Dimension and Mass-Mobility Exponent	715
20.2.3	Dynamic Shape Factor	715
20.2.4	Relative Shape Anisotropy	716
20.3	Coarse-Grained Molecular Dynamics	717
20.4	Monte Carlo Simulations	719
20.5	Discrete Element Method	721
20.5.1	Collision Frequency Function	722
20.6	Particle Dynamics	726
20.7	Concluding Remarks	728
	Nomenclature	729
	Greek Symbols	730
	Subscripts	730
	List of Abbreviations	731
	References	731

Part VI Nanoparticles in Biological Environments 735

21	Biological Activity of Metal Oxide Nanoparticles	737
	<i>Martin Himly, Mark Geppert, and Albert Duschl</i>	
21.1	Bio-Nano Interaction	737
21.2	Interaction of Nanoparticles with Cells	740
21.2.1	Recognition of Nanoparticles by Cells	740
21.2.1.1	Uptake of Nanoparticles into Cells	740
21.2.1.2	Intracellular Fate and Interactions	742
21.3	Uptake Routes of Nanoparticles into the Body and Their Fate There	743
21.4	Biological Test Methods for Assessing Biological Activities and Hazards of Nanoparticles	745
21.4.1	<i>In Vitro</i> Methods	746
21.4.2	<i>In Vivo</i> Methods	747
21.4.3	Biological Endpoints	748
21.5	Exposure of Humans	751
21.5.1	Intentional Exposure	751
21.5.2	Unintentional Exposure	751
21.6	Nanoparticles in the Environment	752
21.7	Understanding and Regulating Risk	754
	List of Abbreviations	756
	References	757

Part VII Metal Oxide Nanoparticles in Applications 761

22	The Properties of Iron Oxide Nanoparticle Pigments	763
	<i>Robin Klupp Taylor</i>	
22.1	Introduction	763
22.2	Properties of Pigments with a Focus on Iron Oxides	764
22.2.1	Introduction by Way of a Commercial Pigment Example	764

22.2.2	Colorimetric Properties of Pigment Films	766
22.2.3	Pigments as Particle Based Optical Materials: General Considerations	768
22.2.4	Radiative Transfer in a Pigment Film: Kubelka–Munk Theory	769
22.2.5	Optical Properties of Metal Oxides for Color Pigments	771
22.2.5.1	Defining the Complex Refractive Index	771
22.2.5.2	Measuring the Complex Refractive Index	771
22.2.6	Microscopic Models for Light Scattering	772
22.2.6.1	Particles Much Smaller Than the Wavelength of Light	773
22.2.6.2	Spherical Particles Similar in Size or Larger Than the Wavelength of Light (Lorenz–Mie Theory)	773
22.2.6.3	Simulating Pigment Color Based on Spherical Particles	775
22.2.6.4	Simulating Pigment Color Based on Nonspherical Particles	777
	Acknowledgements	780
	Nomenclature	780
	List of Abbreviations	780
	References	780
23	Zinc Oxide Nanoparticles for Varistors	783
	<i>Oliver Diwald</i>	
23.1	Introduction	783
23.2	Principle of Operation and Microstructure	784
23.3	Varistor Manufacturing: The Conventional Approach in Industry	790
23.4	Why Use Synthetic ZnO Nanoparticle Powders as Raw Materials	791
23.5	Defect Engineering and Electronic Properties	792
23.6	Impurity Admixture for Microstructure Engineering	793
23.7	Synthesis of Varistor Nanoparticle Powders	794
23.8	Formulation and Shaping of ZnO Powders and Dispersions	795
23.9	Sintering	796
23.9.1	Alternative Approaches for the Sintering of Nanostructured ZnO Green Bodies	799
23.10	Cold Sintering and Ceramic–Polymer Composite Varistors	801
23.11	Concluding Remarks	802
	Nomenclature	804
	List of Abbreviations	804
	References	804
24	Metal Oxide Nanoparticle-Based Conductometric Gas Sensors	809
	<i>Thomas Berger</i>	
24.1	Introduction	809
24.2	Working Principle of Metal Oxide Particle-Based Conductometric Gas Sensors	811
24.3	Porous Layers Consisting of Loaded and Doped Metal Oxide Particles	817
24.3.1	Loaded Metal Oxide Particles	818
24.3.2	Doped Metal Oxide Particles	819
24.4	Metal Oxide Nanoparticle-Based Sensing Layers	821
24.5	Fabrication of Nanoparticle-Based Porous Thick Film Sensing Layers	823
24.5.1	Layer Deposition Involving Particle Dispersions	823
24.5.1.1	Synthesis of Sensing Materials	824
24.5.1.2	Screen Printing	826
