

Contents

List of symbols	9
1. Introduction to X-ray structural analysis soft materials	11
2. Fundamental principles of X-ray diffraction of soft materials	17
2.1. X-ray scattering theory for atomic systems	17
2.2. X-ray scattering theory for complex molecular systems	22
2.3. The effect of temperature vibration on X-ray diffraction	28
3. Measurements of the scattering of X-rays by complex molecular systems	34
3.1. Experimental requirements	34
3.2. The cuvette for the study of soft materials	40
3.3. High temperature X-ray diffraction applied to the study of soft materials	41
4. Data correction procedure	42
4.1. Absorption correction	42
4.2. Polarization factor	43
4.3. Anomalous dispersion of scattering	43
4.4. Normalization of scattering intensity	44
5. The wide angle X-ray scattering (WAXS) in the liquid benzene tri-derivatives	46
5.1. Short-range ordering in liquid 1,3,5-trichlorobenzene at 358 K by X-ray diffraction ..	46
5.2. X-ray diffraction investigations of liquid 1,3,5-tri- <i>tert</i> -butylbenzene at 363 K	53
5.3. The binary radial correlations of atoms and molecules in 1,3,5-triphenylbenzene at 473 K	59
5.4. The influence of functional groups on the geometry of the phenyl ring	65
6. The Lennard-Jones potentials of the liquid benzene tri-derivatives	67
6.1. Theorem of energy of the system of many molecules	67
6.2. Calculations of the Lennard-Jones 12-6 potential in the parametrization of the Kitaigorodsky	68
6.3. The Lennard-Jones 12-6 potentials determined for the liquid benzene tri-derivatives ...	71

7. X-ray studies of the <i>ortho</i>-nitroanisole solution in <i>p</i>-Xylene	74
7.1. Determination of the conformation <i>ortho</i> -nitroanisole by the method of Mozzì-Warren	74
7.2. An X-ray diffraction study on the coordination shells of the <i>ortho</i> -nitroanisole in <i>p</i> -Xylene solution	80
7.3. Final remarks. The application of WAXS in the investigations of binary liquid solutions	83
8. X-ray method of detection of neoplastic changes	84
8.1. X-ray diffraction study of human serum	84
8.2. Definition of the X-ray marker Ω_{rig}	87
8.3. X-ray marker Ω_{rig} for the samples studied	89
9. Abstract and conclusions	93
Literature	95

1. Introduction to X-ray structural analysis of soft materials	11
2. Fundamental principles of X-ray diffraction in soft materials	17
2.1. X-ray scattering theory for atomic systems	17
2.2. X-ray scattering theory for complex molecular systems	22
2.3. The effect of temperature variations on X-ray diffraction	28
3. Measurements of the scattering of X-rays by complex molecular systems	34
3.1. Experimental requirements	34
3.2. The cavity for the study of soft materials	38
3.3. High temperature X-ray diffraction applied to the study of soft materials: the liquid phase	40
4. Data reduction procedure	42
4.1. Absorption correction	42
4.2. Polarization factor	42
4.3. Anomalous dispersion of scattering	43
4.4. Normalization of scattering intensity	44
5. The wide angle X-ray scattering (WAXS) in the liquid phase: tri-derivatives	46
5.1. Short range ordering in liquid 1,3,5-trichlorobenzene at 358 K by X-ray diffraction	46
5.2. X-ray diffraction investigations of liquid 1,3,5-tri- <i>n</i> -butylbenzene at 363 K	49
5.3. The binary liquid correlations of stearic acid and isobutyl in 1,3,5-trichlorobenzene at 473 K	49
5.4. The influence of functional groups on the geometry of the liquid state	63
6. The Lennard-Jones potentials of the liquid benzene tri-derivatives	67
6.1. Theorem of energy of the system of many molecules	67
6.2. Calculations of the Lennard-Jones 12-6 potential in the parametrization of the liquid	68
6.3. The Lennard-Jones 12-6 potential determined for the liquid benzene tri-derivatives	71
