PREFACE	v
UNITS	vi

Part 1: Process Evaluation

<i>Chapter 1: Preliminary Concepts</i>	1
1.1 Process Plant Design	1
1.2 Process Evaluation	4
1.3 Mass and Heat Balances	6
1.4 Flowsheets	18
1.4.1 Block Diagrams	18
1.4.2 Process Flowsheets	19
1.4.3 Engineering Flowsheets	20
1.4.4 Other Diagrams	23
1.5 Units	25

Part 2: Process Plant Design

<i>Chapter 2: Cost Estimation and Optimization</i>	31
2.1 Introduction	31
2.2 Cost of Major Items of Equipment	32
2.3 Costs of Complete Plants	36
2.4 Investment in Auxiliary Services	40
2.5 Estimation of Manufacturing Costs	41
2.6 Estimation of the Total Cost of Product	43
2.7 Profitability and Investment Appraisal	46
2.8 Optimization	57
2.9 Nomenclature	62

<i>Chapter 3: Heat Exchange Equipment</i>	64
3.1 Introduction	64
3.2 General Description of Shell and Tube Units	66
3.3 Heat Transfer Considerations	69
3.3.1 Overall Coefficient of Heat Transfer	69
3.3.2 Heat Transfer Area	72
3.3.3 Mean Temperature Difference	73
3.4 Pressure Drop in Shell and Tube Exchangers	78
3.5 Optimum Operating Conditions	80
3.5.1 Water Outlet Temperature	80
3.5.2 Water Velocity	82
3.6 Evaporator Design	87
3.6.1 Evaporator Types	87

3.6.2 Evaporator Operation	89
3.6.3 Evaporator Accessories	97
3.6.4 Conclusion	100
3.7 Nomenclature	100
 <i>Chapter 4: Towers</i>	 102
4.1 Introduction	102
4.2 Contacting Devices	102
4.3 The Choice between Packed and Plate Columns	103
4.3.1 System Factors	103
4.3.2 Physical Considerations	104
4.3.3 Mode of Operation	105
4.4 Tower Packings	105
4.4.1 Types of Packing	106
4.4.2 Cost Data	114
4.5 Choice of Plate Types	114
4.5.1 Cost Data	116
4.6 Plate Calculations	118
4.6.1 Binary Calculations	119
4.6.2 Minimum Stages at Total Reflux	121
4.6.3 Minimum Reflux at Infinite Stages	121
4.6.4 Theoretical Stages	121
4.6.5 Tray Efficiencies	124
4.7 Multicomponent Calculations	128
4.8 Transfer Unit Calculations	129
4.8.1 Number of Transfer Units	129
4.8.2 Height of a Transfer Unit	130
4.9 Column Diameter	134
4.10 Nomenclature	134
 <i>Chapter 5: Packed Towers</i>	 137
5.1 Introduction	137
5.2 Type and Size of Packing	137
5.3 Flooding	140
5.4 Pressure Drop	142
5.5 Foam	148
5.6 Hold-up	148
5.7 Degree of Wetting	149
5.8 Column Diameter	149
5.9 Height of Packing	152
5.10 Design of a Packed Tower for Distillation	152
5.11 Optimum Design	158
5.12 Nomenclature	161
 <i>Chapter 6: Sieve and Valve Tray Design</i>	 163
6.1 Introduction	163
6.2 Sieve Trays	165

6.2.1 Tower Diameter	165
6.2.2 Plate Spacing	166
6.2.3 Entrainment	167
6.2.4 Weepage	167
6.2.5 Tray Layout	168
6.2.6 Hydraulic Parameters	171
6.2.7 Work Sheet for Sieve Tray Design	174
6.3 Valve Trays	184
6.3.1 Flooding and Entrainment	184
6.3.2 Tray Spacing	184
6.3.3 Foaming	184
6.3.4 Tray Type	184
6.3.5 Tray Diameter and Layout	187
6.3.6 Hydraulic Parameters	192
6.4 Nomenclature	201
 <i>Chapter 7: Mechanical Design</i>	 203
7.1 Introduction	203
7.2 The Mechanical Design of Heat Exchangers	203
7.2.1 General	203
7.2.2 Thickness of Various Components	204
7.3 The Mechanical Design of Columns	214
7.3.1 Vessel Design	215
7.3.2 Vessel Supports	218
7.3.3 Foundations	219
7.3.4 Manholes and Flanges	220
7.3.5 Vessel Internals	222
7.3.6 Materials of Construction	230
7.4 Practical Rules of Thumb	230
7.4.1 Pressure Vessels	230
7.4.2 Reactor Design Temperature	231
7.4.3 Drums	231
7.4.4 Fractionating Towers	233
7.4.5 Heat Exchangers	234
7.4.6 Pipelines and Pumps	235
7.5 Nomenclature	236
 Part 3: Process Plant Selection	
 <i>Chapter 8: Physical Separation Processes</i>	 241
8.1 Introduction	241
8.2 Solid-Solid Separations	241
8.3 Gas-Solid Separations	246
8.3.1 Dry Collectors	247
8.3.2 Wet Scrubbers	250
8.3.3 Miscellaneous Equipment	251

8.4	Liquid–Solid Separation	254
8.4.1	Sedimentation	256
8.4.2	Filters	260
8.4.3	Centrifuges	264
8.4.4	Drying and Dryers	274
8.5	Nomenclature	294
 <i>Chapter 9: Ancillary Equipment</i>		 297
9.1	Introduction	297
9.2	Pumping	297
9.2.1	Pumping of Liquids	298
9.2.2	Compressors	302
9.2.3	Production of Vacuum	307
9.3	Crystallization	311
9.3.1	Crystallization Theory	311
9.3.2	Tank Crystallizers	314
9.3.3	Scraped Surface Crystallizers	315
9.3.4	Vacuum Crystallization	317
9.3.5	The Oslo or ‘Krystal’ Crystallizers	317
9.3.6	Circulating Magma Crystallizers	319
9.3.7	Crystallizer Cost Data	320
9.4	Mixing	320
9.4.1	Solids Mixing	321
9.4.2	Liquid Mixing	324
9.4.3	Costing Data	329
9.5	Grinding	329
9.6	Storage and Storage Vessels	331
9.6.1	Liquid Storage	335
9.6.2	Gas Storage	336
9.6.3	Solids Storage	339
9.7	Nomenclature	339
 <i>Chapter 10: Scale-up of Process Equipment</i>		 342
10.1	Introduction	342
10.2	Basic Principles of Scale-up	343
10.3	Scale-up of Heat Exchange Systems	344
10.3.1	General Principles	344
10.3.2	Scale-up of a Jacketed Vessel	345
10.3.3	Scale-up of Heat Exchangers	346
10.4	Reactor Design	351
10.4.1	Fundamentals of Chemical Reaction	351
10.4.2	Reactor Types	352
10.5	Scale-up of Chemical Reactors	356
10.5.1	General	356
10.5.2	Scale-up of Tubular Flow Reactors	358
10.5.3	Scale-up of Batch Reactors	361
10.5.4	Scale-up of Other Reactor Types	361

10.6 Scale-up of Liquid Mixing Systems	362
10.6.1 Introduction	362
10.6.2 Scale-up from Pilot-Scale Tanks	364
10.7 Scale-up of Fluid Flow Systems	366
10.7.1 Introduction	366
10.7.2 Scale-up Considerations	366
10.8 Nomenclature	368

Part 4: Overall Considerations

<i>Chapter 11: The Complete Plant</i>	373
11.1 Introduction	373
11.2 Location of Chemical Plant	374
11.3 Layout of Chemical Plant	377
11.3.1 Introduction	377
11.3.2 Basic Principles of Plant Layout	377
11.3.3 Drainage and Waste Disposal	383
11.3.4 Services	384
11.4 Piping Layout	384
11.4.1 General	384
11.4.2 Economy of Piping Layout	385
11.4.3 Overhead Piping	387
11.5 General Considerations	388
11.5.1 Maintenance of Equipment	388
11.5.2 Structural Design	389
11.5.3 Manning	389
11.5.4 Health and Safety	390
11.6 Conclusion	391
APPENDIX: COMMON CONVERSION FACTORS TO SI UNITS	393
INDEX	395
