Introduction	XI
Conventions and notations	XIV
PART I: THEORETICAL FOUNDATIONS	
1 General notions and principles	
Purpose of the chapter	3
1.1 Introductory concepts	3
1.1.1 Space and time	3
1.1.2 Motion	3
1.1.3 Mass	5
1.1.4 Forces	6
1.1.5 Temperature, energy and entropy.	8
1.1.6 Heat supply	9
1.2 Fundamental principles	10
1.2.1 Balance of momentum	10
1.2.2 Balance of moment of momentum	10
1.2.3 Balance of energy	11
1.2.4 Dissipation principle	11
1.3 Basic fields	12
1.3.1 Displacements	12
1.3.2 Strains and strain rates	12
1.3.3 Stresses and stress rates	14
1.3.4 Heat fluxes	16
1.3.5 Matrix notation for the basic fields	16
1.4 Resulting relations.	19
1.4.1 Equation of motion	19
1.4.2 Energy equation	21
1.4.3 Dissipation inequality	22
1.4.4 Matrix form of the resulting equations	23
Summary	24
Problems	25

2 Materials, loadings and constraints

Purpose of the chapter	27
2.1 Materials	27
2.1.1 Real materials and ideal materials	27
2.1.2 Thermo-visco-elastic materials	28
2.1.3 Linear thermo-elastic materials	29
2.1.4 Thermo-elastic-plastic materials	30
2.1.5 Matrix form of constitutive relations	34
2.2 Loadings and heat supply	37
2.2.1 External agents	37
2.2.2 Body loadings and internal heat supply	38
2.2.3 Boundary loadings	38
2.2.4 Boundary heat supply	39
2.3 Constraints	39
2.3.1 Boundary and internal constraints	39
2.3.2 Reactions	42
2.3.3 Bilateral constraints	44
2.3.4 Constraint functions	46
2.3.5 Constraints for stresses and heat fluxes	47
Summary	49
Problems	50

3 Formulation of engineering theories

Purpose of the chapter	52
3.1 General form of governing relations	52
3.1.1 Finite variational formulation	52
3.1.2 Incremental variational formulation	55
3.1.3 Variational equations for stresses and heat fluxes	58
3.1.4 Calculation of reactions	59
3.1.5 Matrix form of variational equations	60
3.2 Method of constraints: finite formulation	61
3.2.1 Foundations	61
3.2.2 Shell and plate theories	65
3.2.3 Rod and beam theories	71
3.2.4 Plane problems	74
3.3 Method of constraints: incremental formulation	77
3.3.1 General equations	77
3.3.2 Shells and rods	78
3.3.3 Plane problems	79

3.4 Method of constraints: discrete description of elements and structures	80
3.4.1 Discretization concept	80
3.4.2 Finite formulation	80
3.4.3 Incremental formulation	86
3.4.4 Shell and plate elements	87
3.4.5 Rod and beam elements	89
3.4.6 Special cases and matrix notation	91
3.4.7 Interaction between elements	96
3.5 Evaluation and correction of solutions	97
3.5.1 Residual reactions	97
3.5.2 Evaluation of solutions	99
3.5.3 Correction of solutions	101
3.5.4 On adaptive solution refinements	103
Summary	103
Problems	104

4 Extensions and specifications of the general theory

Purpose of the chapter	106
4.1 Domain discretization	107
4.2 Solving differential equations by weighted residual methods . .	109
4.3 Assembly of element matrices and vectors	113
4.4 Elastic pin-jointed element in space	118
4.5 Elastic frame element in space	123
4.6 Elastic lattice-type structures	131
4.6.1 Discrete models	131
4.6.2 Continuous models	141
4.7 Engineering shell theories	147
4.7.1 Foundations	147
4.7.2 General form of equations of motion	151
4.7.3 Special theories	158
4.7.4 Example: axisymmetric deformations of shells	162
4.8 Thin shell finite element for nonlinear axisymmetric analysis . .	164
4.9 Linear strain triangular element for nonlinear plane stress analysis	182
4.10 Constitutive matrices for thermo-elastic-plastic materials . . .	193
4.11 On inelastic analysis under non-proportionally varying loads .	197
4.11.1 Elastic-plastic structures subjected to mechanical loads .	197
4.11.2 Thermo-elastic-plastic structures subjected to mechanical and thermal loads	203

Contents

Summary	205
Problems	206
5 Numerical algorithms and software concepts	
Purpose of the chapter	212
5.1 Introductory comments	212
5.2 Nonlinear quasi-statics	213
5.3 Integration of elastic-plastic constitutive law	225
5.4 Initial and linearized buckling	229
5.5 Nonlinear dynamics	232
5.6 Dynamic stability under non-periodic loads	237
5.7 Nonlinear heat transfer	242
5.8 Development of software	244
Summary	246
Problems	246

PART II: SELECTED APPLICATIONS

6 Trusses, frames, lattice-type shells

Purpose of the chapter	251
6.1 Trusses	251
6.1.1 Nonlinear effects in truss analysis — a model problem . . .	251
6.1.2 Accuracy of computations and further examples	261
6.1.3 Elastic-plastic truss under non-proportionally varying loads	272
6.2 Frames	277
6.2.1 Elastic-plastic constitutive matrices for beam elements . . .	277
6.2.2 Limit state conditions	283
6.2.3 Nonlinear analysis of curved beams	290
6.2.4 Examples of numerical frame analysis up to collapse	291
6.2.5 Elastic-plastic beam under non-proportionally varying loads .	298
6.2.6 Elastic buckling of plane grid	305
6.2.7 Approximate large displacement analysis of frames using buckling mode superposition	306
6.3 Lattice-type structures	312
6.3.1 Lattice shells — linear and “second-order” theories	312
6.3.2 Buckling of elastic grid	318
6.3.3 Perfectly-plastic lattice-type plates — discrete model	322
6.3.4 Limit load of polar grids — continuous model	339
6.3.5 Minimum weight design of ideally plastic rectangular dense grid	351
Summary	360
Problems	360

7 Thin plates loaded in-plane

Purpose of the chapter	363
7.1. Elastic-plastic bending of a cantilever beam	363
7.2 Limit analysis of perforated plates	369
7.3 Elastic-plastic analysis of a cantilever under non-proportionally varying loads	376
7.4 In-plane buckling of an elastic-plastic strip	379
7.5 Necking of an elastic-plastic strip	380
7.6 Extension of a thin rectangular plate with a central hole	383
Summary	384

8 Plate and shell problems .

Purpose of the chapter	385
8.1 Thin elastic-plastic axisymmetric shells	385
8.2 Elastic-viscoplastic analysis of axisymmetric shells	405
8.3 Buckling of elastic-plastic spatial plate assemblies	410
Summary	430

9 Heat conduction and thermal stress problems

Purpose of the chapter	431
9.1 Heat flow in flash and friction welding	431
9.2 Thermally induced stresses in elastic-plastic plate	440
9.3 Elastic-plastic cylindrical shell under thermo-mechanical load .	443
9.4 Elastic-plastic truss under nonproportionally varying temperature and mechanical load	445
Summary	448
