

# Table of Contents

<b>Preface</b>	1
<b>Chapter 1: Setting Up Your Development Environment</b>	7
<b>Technical requirements</b>	7
<b>What is the Raspberry Pi?</b>	8
Microcontrollers	9
General-Purpose Input/Output (GPIO) pins	10
Debian and Raspbian	10
Johnny-Five and Raspi-IO	10
So, the Pi is technically a microcontroller...	11
...but it is also a computer!	11
<b>How we will use the Raspberry Pi</b>	11
Taking advantage of all that the Raspberry Pi has to offer!	12
Johnny-Five – letting us code hardware in Node.js	12
<b>Installing the operating system</b>	13
Downloading Raspbian Lite	13
Burning the image to an SD card	14
Editing files on the SD card	15
Booting up the Pi	16
SSHing from a Linux or Mac	17
SSHing from Windows	18
<b>Setting up your password and hardware interfaces</b>	20
First things first – change your password!	20
Updating the Raspberry Pi	21
Turning on the hardware interfaces	21
<b>Installing Node.js, Johnny-Five, and Raspi-IO</b>	22
Installing Node.js and npm	22
Detecting your version of ARM processor	23
Installing Johnny-Five and Raspi-IO	25
<b>Summary</b>	25
<b>Questions</b>	25
<b>Further reading</b>	26
<b>Chapter 2: Creating Your First Johnny-Five Project</b>	27
<b>Technical requirements</b>	27
<b>Creating a project folder</b>	28
Setting up npm to manage our modules	29
<b>Getting started with Johnny-Five and Raspi-IO</b>	29
Gathering resources and documentation	30
Taking a look at the LED-blink project	31

Raspberry Pi pin numbers	32
<b>Wiring up an LED</b>	
Putting together and attaching the cobbler	34
Attaching the resistor and LED	34
<b>Making the LED blink</b>	36
Putting your code on the Raspberry Pi	37
Running your code	37
<b>Summary</b>	38
<b>Questions</b>	38
<b>Further reading</b>	38
<b>Chapter 3: Building Interactive Projects with RGB LED</b>	39
<b>Technical requirements</b>	39
<b>Looking at the LED and LED.RGB API</b>	40
The LED object	40
The Led.RGB object	41
<b>PWM pins and GPIO expanders</b>	42
How do PWM pins work?	42
Why we need a GPIO expander	44
Wiring up our GPIO expander and RGB LED	44
<b>Bringing in other node packages</b>	45
Project – building a rainbow	45
Using the color npm module	46
Getting our Johnny-Five code started	46
<b>The REPL – a powerful tool in Johnny-Five</b>	47
How does the REPL work?	47
Adding our RGB LED to the REPL	48
Controlling our LED from the command-line interface	49
<b>Summary</b>	49
<b>Questions</b>	50
<b>Further reading</b>	50
<b>Chapter 4: Bringing in Input with Buttons</b>	51
<b>Technical requirements</b>	51
<b>Using inputs in robotics projects</b>	51
Digital versus analog input	52
How to handle analog input with the Raspberry Pi	52
Analog GPIO expanders	52
Using input devices with digital interfaces	52
How Johnny-Five handles input	53
The structure of a typical Johnny-Five project	53
The beginning – including libraries and creating our board object	53
The board ready event handler	54
Constructing our component objects	54
Input event handlers and output device manipulation	54
<b>The Johnny-Five button object</b>	54

The button object	55
Button events	55
<b>Wiring up buttons</b>	56
Putting a button on a breadboard	56
Using a pull-down resistor	57
<b>Adding buttons to our RGB LED project</b>	57
Wiring everything up	57
Using the power and ground side rails	57
Wiring up the buttons	59
Button 1 – stop and start rainbow	60
Refactoring the rainbow cycle	60
Button 2 – next color	61
<b>Summary</b>	62
<b>Questions</b>	62
<b>Further reading</b>	62
<b>Chapter 5: Using a Light Sensor to Create a Night-Light</b>	63
<b>Technical requirements</b>	63
<b>Using an analog sensor with the Pi</b>	64
Finding the right sensors for your Pi project	64
I2C devices	64
SPI	64
How to determine if your sensor will work with Johnny-Five	65
<b>The ambient light sensor</b>	65
Wiring up the sensor	66
Writing a program to get readings and print them to the command line	67
The Johnny-Five sensor events	67
Handling sensor data in the event handler	67
Using and formatting Johnny-Five sensor data	68
Using <code>.scaleTo()</code> and <code>.fScaleTo()</code> to fine-tune measurements	69
Printing sensor data to the command line	69
Using <code>barcli</code> to make the data easier to see	70
Importing <code>barcli</code> and constructing our <code>barcli</code> graph	71
Getting the bar graph to update	71
<b>Creating our night-light</b>	72
Wiring up the LED	72
Coding this project	73
<b>Summary</b>	74
<b>Questions</b>	74
<b>Further reading</b>	75
<b>Chapter 6: Using Motors to Move Your Project</b>	77
<b>Technical requirements</b>	77
<b>More about motors</b>	78
How to control a motor with a microcontroller	79
<b>Preparing for a motor-driven project with Raspberry Pi</b>	80
Putting the hat together	80

Putting the hat on the Pi	81
<b>The Johnny-Five motor object</b>	82
Constructors for our hat	83
Functions that move the motor	83
Adding REPL control	83
Loading and running your motor	84
<b>Troubleshooting your motorized projects</b>	84
<b>Project – cat toy</b>	85
Putting a piece of paper on the motor shaft	86
Coding the randomness to start/stop the motor	86
<b>Project – using two gearbox motors and the motors object</b>	87
Wiring up your TT motors	88
The motors Johnny-Five object	89
Writing some functions	90
Running our motors project	91
<b>Summary</b>	92
<b>Questions</b>	92
<b>Chapter 7: Using Servos for Measured Movement</b>	93
<b>Technical requirements</b>	93
<b>Differences between motors and servos</b>	94
Calculated movements	94
Regular versus continuous servos	95
Powering servos and motors	95
<b>Getting a servo working with Johnny-Five</b>	95
The Johnny-Five servo object	96
Wiring the servo to our PWM hat	97
Coding your first servo sweep	99
<b>Project – two servos and the REPL</b>	99
Wiring up a second servo	100
Using the Johnny-Five servos object	100
Adding the Servos object to our code	101
Adding in REPL functionality	102
Playing with our servos on the command line	102
<b>Project – light meter with the servo</b>	102
Adding in the light sensor	103
Making the servo into a meter	104
Coding the project	104
Running and using our light meter	105
<b>Project – the continuous servo</b>	105
Wiring up the servo	106
Continuous servo constructor and methods	107
Using the REPL with the continuous servo	107
Playing with the continuous servo in the REPL	108
<b>Summary</b>	108

<b>Questions</b>	109
<b>Chapter 8: The Animation Library</b>	111
<b>Technical requirements</b>	111
<b>Animating movement</b>	112
Why we need the animation library	112
Moving servos with true precision	112
Implicit use of the animation library	113
Using servo.to() to implicitly create an animation	113
Playing with implicit animations	115
Playing with implicit animations, take two	116
<b>The terminology of the animation library</b>	117
<b>The construction of the animation object</b>	119
Creating the animation object	119
Planning out the animation sequence	120
Creating keyframes	120
Using null and false as positions in keyframes	121
Programming our keyframes	121
Setting cue points and duration	122
Putting it all together to make an animation	122
Watching your animation at work	122
<b>Easing into your servo animations</b>	123
How easing fits into an animation segment	123
Adding easing to our first animation	123
Easing an entire animation segment	124
<b>Learning more about queuing and playing animation segments</b>	124
Looping animation segments	125
Changing the speed of animation segments	126
Playing, pausing, and stopping animation segments	126
Tying it all together in the REPL	127
<b>Summary</b>	128
<b>Questions</b>	128
<b>Chapter 9: Getting the Information You Need</b>	129
<b>Technical requirements</b>	129
<b>Why connect your NodeBots to the internet?</b>	130
Using the power of npm modules	130
Using the data you collect	130
Some things to keep in mind	131
<b>Getting weather data on our Pi with OpenWeatherMap</b>	131
Getting an OpenWeatherMap API key	132
Bringing in request	133
Parsing the response	134
<b>Building a weather dashboard with an LCD</b>	135
Adding an LCD to the Pi	135
The LCD object	136

Constructing our LCD	136
Setting up the LCD	136
Printing to and clearing the LCD	137
Coding it all together	137
<b>Project – scraping data from websites with your Pi</b>	139
Scraping downforeveryoneorjustme.com for johnny-five.io	139
Making the HTTP request	140
Using Cheerio to get the element we want	142
Parsing the HTML and showing the result	142
<b>Summary</b>	143
<b>Questions</b>	143
<b>Further reading</b>	144
<b>Chapter 10: Using MQTT to Talk to Things on the Internet</b>	145
<b>Technical requirements</b>	145
<b>IoT device communications</b>	146
Long polling	146
Websockets	146
<b>MQTT - an IoT PubSub protocol</b>	147
The basics of MQTT	147
<b>Setting up MQTT on the Pi with AdafruitIO</b>	147
Creating an account and a feed	148
Subscribing to the feed using the mqtt npm module	150
The mqtt module	150
The dotenv module	150
Testing our connection	151
<b>Project – adding an LCD and button to see and send MQTT events</b>	152
Wiring it all up	152
Coding it all together	153
<b>Project – social media notifier bot with IFTTT</b>	156
Getting started with IFTTT	156
Linking IFTTT to Adafruit	156
Setting up feeds for your social media MQTT messages in AdafruitIO	157
Creating our IFTTT Applets	158
Wiring up our project	161
Coding our social media notifications to show on the LCD	162
Running your social media bot	163
<b>Summary</b>	164
<b>Questions</b>	164
<b>Further reading</b>	164
<b>Chapter 11: Building a NodeBots Swarm</b>	165
<b>Technical requirements</b>	165
<b>Project – connecting multiple NodeBots</b>	165
Optional – setting up a second Raspberry Pi	166
Setting up your project files and folders	166

If you're using one Pi	167
If you're using two Pis	167
Adding a light sensor to the Pi	168
Creating an MQTT broker on the Pi	168
Programming the MQTT client – have the Pi Report Home	169
If you're using one Pi	170
If you're using two Pis	171
Running our MQTT project	171
If you're using one Pi	171
If you're using two Pis	172
<b>Expanding your NodeBots knowledge</b>	172
Using Johnny-Five on other boards	172
Figuring out pin numbers	173
Checking the platform support page	175
Other node robotics platforms	176
The Tessel 2	176
The Espruino ecosystem	177
Programming graphically with Node-RED	178
<b>Continuing on your NodeBots adventure</b>	179
Figuring out what to build	180
Reaching out to the NodeBots community	180
Where to go to learn more about Electronics	180
<b>Summary</b>	181
<b>Assessments</b>	183
<b>Other Books You May Enjoy</b>	189
<b>Index</b>	193
