Table of Contents

Preface 1

Section 1: Core Concepts

Chapter 1: The Nuts and Bolts of Neural Networks 9
The mathematical apparatus of NNs 10
Linear algebra 10
Vector and matrix operations 12
Introduction to probability 16
Probability and sets 18
Conditional probability and the Bayes rule 20
Random variables and probability distributions 22
Probability distributions 25
Information theory 28
Differential calculus 31
A short introduction to NNs 34
Neurons 35
Layers as operations 36
NNs 38
Activation functions 40
The universal approximation theorem 45
Training NNs 47
Gradient descent 48
Cost functions 50
Backpropagation 52
Weight initialization 56
SGD improvements 58
Summary 60

Section 2: Computer Vision

Chapter 2: Understanding Convolutional Networks 63
Understanding CNNs 64
Types of convolutions 70
Transposed convolutions 70
1×1 convolutions 73
Depth-wise separable convolutions 74
Dilated convolutions 75
Improving the efficiency of CNNs 76
Convolution as matrix multiplication 77
Winograd convolutions 79
Visualizing CNNs 82

Guided backpropagation 82
Gradient-weighted class activation mapping 85
CNN regularization 87
Introducing transfer learning 90
Implementing transfer learning with PyTorch 91
Transfer learning with TensorFlow 2.0 97
Summary 102

Chapter 3: Advanced Convolutional Networks 103
Introducing AlexNet 104
An introduction to Visual Geometry Group 105
VGG with PyTorch and TensorFlow 107
Understanding residual networks 108
Implementing residual blocks 111
Understanding Inception networks 118
Inception v1 119
Inception v2 and v3 120
Inception v4 and Inception-ResNet 122
Introducing Xception 123
Introducing MobileNet 126
An introduction to DenseNets 128
The workings of neural architecture search 131
Introducing capsule networks 136
The limitations of convolutional networks 136
Capsules 138
Dynamic routing 140
The structure of the capsule network 142
Summary 143

Chapter 4: Object Detection and Image Segmentation 145
Introduction to object detection 146
Approaches to object detection 147
Object detection with YOLOv3 148
A code example of YOLOv3 with OpenCV 154
Object detection with Faster R-CNN 157
Region proposal network 159
Detection network 161
Implementing Faster R-CNN with PyTorch 163
Introducing image segmentation 166
Semantic segmentation with U-Net 167
Instance segmentation with Mask R-CNN 170
Implementing Mask R-CNN with PyTorch 172
Summary 174

Chapter 5: Generative Models 175
Intuition and justification of generative models 175

Introduction to VAEs 176
Generating new MNIST digits with VAE 181
Introduction to GANs 187
Training GANs 188
Training the discriminator 190
Training the generator 192
Putting it all together 193
Problems with training GANs 195
Types of GAN 196
Deep Convolutional GAN 196
Implementing DCGAN 197
Conditional GAN 202
Implementing CGAN 203
Wasserstein GAN 206
Implementing WGAN 209
Image-to-image translation with CycleGAN 212
Implementing CycleGAN 215
Building the generator and discriminator 216
Putting it all together 218
Introducing artistic style transfer 222
Summary 224

Section 3: Natural Language and Sequence Processing

Chapter 6: Language Modeling 227
Understanding n-grams 228
Introducing neural language models 230
Neural probabilistic language model 232
Word2Vec 233
CBOW 234
Skip-gram 236
fastText 238
Global Vectors for Word Representation model 239
Implementing language models 243
Training the embedding model 243
Visualizing embedding vectors 246
Summary 250

Chapter 7: Understanding Recurrent Networks 251
Introduction to RNNs 251
RNN implementation and training 256
Backpropagation through time 258
Vanishing and exploding gradients 262
Introducing long short-term memory 264
Implementing LSTM 269
Introducing gated recurrent units 274

Implementing GRUs 275
Implementing text classification 278
Summary 282

Chapter 8: Sequence-to-Sequence Models and Attention 283
Introducing seq2seq models 284
Seq2seq with attention 287
Bahdanau attention 287
Luong attention 290
General attention 292
Implementing seq2seq with attention 294
Implementing the encoder 294
Implementing the decoder 295
Implementing the decoder with attention 296
Training and evaluation 298
Understanding transformers 302
The transformer attention 302
The transformer model 306
Implementing transformers 310
Multihead attention 310
Encoder 313
Decoder 315
Putting it all together 316
Transformer language models 319
Bidirectional encoder representations from transformers 319
Input data representation 321
Pretraining 322
Fine-tuning 324
Transformer-XL 326
Segment-level recurrence with state reuse 328
Relative positional encodings 329
XLNet 331
Generating text with a transformer language model 335
Summary 337

Section 4: A Look to the Future

Chapter 9: Emerging Neural Network Designs 341
Introducing Graph NNs 342
Recurrent GNNs 345
Convolutional Graph Networks 348
Spectral-based convolutions 349
Spatial-based convolutions with attention 352
Graph autoencoders 355
Neural graph learning 359
Implementing graph regularization 361
Introducing memory-augmented NNs 365

Neural Turing machines 366
MANN* 373
Summary 374

Chapter 10: Meta Learning 375
Introduction to meta learning 376
Zero-shot learning 377
One-shot learning 378
Meta-training and meta-testing 380
Metric-based meta learning 382
Matching networks for one-shot learning 382
Siamese networks 385
Implementing Siamese networks 386
Prototypical networks 389
Optimization-based learning 393
Summary 400

Chapter 11: Deep Learning for Autonomous Vehicles 401
Introduction to AVs 402
Brief history of AV research 402
Levels of automation 405
Components of an AV system 406
Environment perception 408
Sensing 409
Localization 411
Moving object detection and tracking 411
Path planning 412
Introduction to 3D data processing 413
Imitation driving policy 417
Behavioral cloning with PyTorch 418
Generating the training dataset 421
Implementing the agent neural network 423
Training 424
Letting the agent drive 426
Putting it all together 427
Driving policy with ChauffeurNet 429
Input and output representations 429
Model architecture 432
Training 434
Summary 439
