

# Table of Contents

<b>Preface</b>	1
<b>Section 1: Deep Dive into PyQt</b>	
<b>Chapter 1: Getting Started with PyQt</b>	11
<b>Technical requirements</b>	11
Installing Qt Designer	12
<b>Introducing Qt and PyQt</b>	13
PyQt5	13
Working with Qt and PyQt	14
Understanding Qt's documentation	14
Core Qt modules	15
<b>Creating Hello Qt – our first window</b>	16
<b>Creating a PyQt application template</b>	18
<b>Introducing Qt Designer</b>	20
Using Qt Designer	20
<b>Summary</b>	22
<b>Questions</b>	22
<b>Further reading</b>	23
<b>Chapter 2: Building Forms with QtWidgets</b>	25
<b>Technical requirements</b>	25
<b>Creating basic QtWidgets widgets</b>	25
QWidget	26
QWidget as a top-level window	27
QLabel	28
QLineEdit	29
QPushButton and other buttons	29
QComboBox	31
QSpinBox	32
QDateTimeEdit	33
QTextEdit	36
<b>Placing and arranging widgets</b>	37
Layout classes	37
QHBoxLayout and QVBoxLayout	37
QGridLayout	38
QFormLayout	39
Controlling widget size	40
Container widgets	43
QTabWidget	43
QGroupBox	44

<b>Validating widgets</b>	46
Creating an IPv4 entry widget	46
Using QSpinBox for discrete values	48
<b>Building a calendar application GUI</b>	50
Building the GUI in code	51
Creating the widgets	51
Building the layout	52
Building the GUI in Qt Designer	54
First steps	54
Building the right panel	55
Building the event form	56
Previewing the form	57
<b>Summary</b>	57
<b>Questions</b>	57
<b>Further reading</b>	59
<b>Chapter 3: Handling Events with Signals and Slots</b>	61
<b>Technical requirements</b>	61
<b>Signal and slot basics</b>	62
Restrictions on signal and slot connections	63
<b>Creating custom signals and slots</b>	65
Sharing data between windows using custom signals	66
Overloading signals and slots	68
<b>Automating our calendar form</b>	70
Using our hand-coded form	70
Creating and connecting our callback methods	71
The populate_list () method	72
The populate_form () method	73
The save_event () method	74
The delete_event () method	75
The check_delete_btn () method	75
Building our new category pop-up form	76
Using Qt Designer .ui files	78
Connecting slots in Qt Designer	78
Converting .ui files to Python	79
Automatic signal and slot connections	81
Using .ui files without conversion	82
<b>Summary</b>	83
<b>Questions</b>	83
<b>Further reading</b>	85
<b>Chapter 4: Building Applications with QMainWindow</b>	87
<b>Technical requirements</b>	87
<b>The QMainWindow class</b>	88
Setting a central widget	89
Adding a status bar	89
Creating an application menu	90

Menus on macOS	92
Adding toolbars	92
Adding dock widgets	95
Other QMainWindow features	97
<b>Standard dialog boxes</b>	97
QMessageBox	98
QFileDialog	101
QFontDialog	103
Other dialog boxes	104
<b>Saving settings with QSettings</b>	106
Limitations of QSettings	107
<b>Summary</b>	108
<b>Questions</b>	108
<b>Further reading</b>	109
<b>Chapter 5: Creating Data Interfaces with Model-View Classes</b>	111
<b>Technical requirements</b>	111
<b>Understanding model-view design</b>	112
<b>Models and views in PyQt</b>	115
<b>Building a CSV editor</b>	117
Creating a table model	117
Implementing read capabilities	118
Adding headers and sorting	120
Implementing write capabilities	121
Using the model in a view	124
<b>Summary</b>	127
<b>Questions</b>	127
<b>Further reading</b>	128
<b>Chapter 6: Styling Qt Applications</b>	129
<b>Technical requirements</b>	129
<b>Using fonts, images, and icons</b>	130
Setting a font	131
Dealing with missing fonts	132
Adding images	134
Using icons	135
Using Qt resource files	136
Qt resource files and fonts	138
<b>Configuring colors, style sheets, and styles</b>	140
Customizing colors with palettes	140
Working with QBrush objects	142
Customizing the appearance with Qt Style Sheets (QSS)	143
The downside of QSS	146
Customizing the appearance with QStyle	147
Customizing Qt styles	148
Drawing widgets	150

<b>Creating animations</b>	151
Basic property animations	151
Animating colors	152
Using animation groups	155
<b>Summary</b>	156
<b>Questions</b>	156
<b>Further reading</b>	158
<b>Section 2: Working with External Resources</b>	
<b>Chapter 7: Working with Audio-Visual Using QtMultimedia</b>	161
<b>Technical requirements</b>	161
<b>Simple audio playback</b>	162
<b>Recording and playing audio</b>	164
The initial setup	164
Implementing sound playback	164
Loading the media	166
Tracking the playback position	168
Looping the audio	169
Setting the volume	170
Implementing recording	171
Examining and configuring the recorder	173
<b>Recording and playing video</b>	175
Building the basic GUI	176
Video playback	177
Video recording	178
<b>Summary</b>	182
<b>Questions</b>	183
<b>Further reading</b>	184
<b>Chapter 8: Networking with QtNetwork</b>	185
<b>Technical requirements</b>	185
<b>Low-level networking with sockets</b>	186
Building a chat GUI	187
Building a UDP chat client	188
Connecting signals	192
Testing the chat	192
Building a TCP chat client	193
Working with data streams	194
Sending data over TCP	195
Connecting our backend and testing	197
<b>HTTP communications with QNetworkAccessManager</b>	198
Simple downloading	198
Posting data and files	200
Building the GUI	201
The POSTing backend	202
Testing the utility	205

<b>Summary</b>	206
<b>Questions</b>	206
<b>Further reading</b>	207
<b>Chapter 9: Exploring SQL with Qt SQL</b>	209
<b>Technical requirements</b>	209
<b>SQL basics</b>	210
Creating tables	210
Inserting and updating data	212
Updating existing rows	213
Selecting data	214
Table joins	214
SQL subqueries	215
Learning more	217
<b>Performing SQL queries with Qt</b>	217
Building a form	217
Connecting and making simple queries	219
Getting information about the database	220
Making simple queries	221
Prepared queries	222
Using QSqlQueryModel	224
Finishing the GUI	226
<b>Using model-view widgets without SQL</b>	226
Delegates and data mapping	228
Data mapping	230
Filtering data	233
Using a custom delegate	234
Inserting custom rows in a table view	235
<b>Summary</b>	237
<b>Questions</b>	238
<b>Further reading</b>	239

---

## Section 3: Unraveling Advanced Qt Implementations

---

<b>Chapter 10: Multithreading with QTimer and QThread</b>	243
<b>Technical requirements</b>	243
<b>Delayed actions with QTimer</b>	244
Single shot timers	245
Repeating timers	246
Getting information from timers	247
Limitations of timers	247
<b>Multithreading with QThread</b>	248
The SlowSearcher file search engine	249
A non-threaded searcher	251
Testing our non-threaded search application	252
Adding threads	253
An alternate method	254

Threading tips and caveats	255
<b>High concurrency with QThreadPool and QRunner</b>	257
The file hasher GUI	257
A hash runner	259
Creating the thread pool	262
Testing the script	264
Threading and the Python GIL	264
<b>Summary</b>	265
<b>Questions</b>	266
<b>Further reading</b>	268
<b>Chapter 11: Creating Rich Text with QTextDocument</b>	269
<b>Technical requirements</b>	269
<b>Creating rich text using markup</b>	270
HTML basics	270
Style sheet syntax	272
Semantic versus cosmetic tags	272
Structure and heading tags	273
Typography tags	274
Hyperlinks	275
Lists and tables	276
Fonts, colors, images, and styles	278
Document-wide styles	279
Images	280
Differences between Qt rich text and Web HTML	280
<b>Manipulating rich text using QTextDocument</b>	281
Creating the invoice application GUI	281
Building InvoiceView	284
The QTextDocument structure	285
Character formats	288
Adding basic content	288
Inserting a list	290
Inserting a table	291
Finishing and testing	293
<b>Printing rich text</b>	294
Updating the Invoice app for print support	294
Configuring the printer	295
Printing a page	296
Print previewing	297
Exporting to PDF	297
<b>Summary</b>	298
<b>Questions</b>	298
<b>Further reading</b>	300
<b>Chapter 12: Creating 2D Graphics with QPainter</b>	301
<b>Technical requirements</b>	301

<b>Image editing with QPainter</b>	302
The meme generator GUI	302
The editing form	302
The main GUI	307
Drawing with QImage	307
The QPainter object	308
Saving our image	311
<b>Custom widgets with QPainter</b>	312
Building a GraphWidget	313
Painting the widget	315
Using GraphWidget	320
<b>Animating 2D graphics with QGraphicsScene</b>	322
First steps	322
Making a scene	323
Creating the tanks	325
Creating the bullets	329
Collision detection	331
Finishing the game	332
<b>Summary</b>	334
<b>Questions</b>	334
<b>Further reading</b>	336
<b>Chapter 13: Creating 3D Graphics with QtOpenGL</b>	337
<b>Technical requirements</b>	337
<b>The basics of OpenGL</b>	338
The rendering pipeline and drawing basics	338
Programs and shaders	339
A simple vertex shader	340
A simple fragment shader	342
<b>Embedding OpenGL drawings with QOpenGLWidget</b>	343
First steps with QOpenGLWidget	343
Creating a program	345
Accessing our variables	346
Configuring a projection matrix	347
Drawing our first shape	348
Creating a 3D object	352
<b>Animating and controlling OpenGL drawings</b>	355
Animating in OpenGL	355
Zooming in and out	356
<b>Summary</b>	358
<b>Questions</b>	358
<b>Further reading</b>	359
<b>Chapter 14: Embedding Data Plots with QtCharts</b>	361
<b>Technical requirements</b>	361
<b>Making a simple chart</b>	362

Setting up the GUI	362
Building a disk usage chart	363
<b>Displaying real-time data</b>	368
Building a CPU usage chart	368
Updating the chart data	370
Panning and zooming around the chart	371
<b>Styling Qt charts</b>	372
Building the memory chart	373
Chart styling	375
Styling axes	377
Styling the legend	378
<b>Summary</b>	379
<b>Questions</b>	380
<b>Further reading</b>	381
<b>Chapter 15: PyQt Raspberry Pi</b>	383
<b>Technical requirements</b>	383
<b>Running PyQt5 on the Pi</b>	384
Editing Python on the Pi	386
Running PyQt5 applications on the Pi	386
<b>Controlling GPIO devices with PyQt</b>	387
Connecting the LED circuit	387
Writing a driver library	390
PWM	391
Setting a color	392
Cleaning up	393
Creating the PyQt GUI	394
<b>Controlling PyQt with GPIO devices</b>	395
Connecting the sensor circuit	395
Creating the sensor interface	397
Displaying the readings	399
Adding a hardware button	401
Expanding the circuit	401
Implementing the button driver	402
<b>Summary</b>	405
<b>Questions</b>	405
<b>Further reading</b>	407
<b>Chapter 16: Web Browsing with QtWebEngine</b>	409
<b>Technical requirements</b>	409
<b>Building a basic browser with QWebEngineView</b>	410
Using the QWebEngineView widget	410
Allowing multiple windows and tabs	412
Adding a tab for pop-up windows	414
<b>Advanced QtWebEngine usage</b>	415
Sharing a profile	415

---

Viewing history	416
Web settings	418
Building a text search feature	419
<b>Summary</b>	423
<b>Questions</b>	424
<b>Further reading</b>	425
<b>Chapter 17: Preparing Your Software for Distribution</b>	427
<b>Technical requirements</b>	427
<b>Structuring a project</b>	428
Tic-tac-toe	428
The engine class	428
The board class	430
The main window class	432
Module-style structure	434
Structuring the module	434
Non-Python files	436
Documentation and metadata	438
The LICENSE file	438
The README file	439
The docs directory	443
The requirements.txt file	443
Other files	444
<b>Distributing with setuptools</b>	444
Writing the setuptools configuration	445
Basic metadata arguments	445
Packages and dependencies	447
Non-Python files	449
Executables	450
Source distributions	451
Creating a source distribution	451
Installing a source distribution	452
Built distributions	453
Types of built distributions	453
Creating a wheel distribution	454
Installing a built distribution	455
<b>Compiling with PyInstaller</b>	456
PyInstaller overview	456
Basic command-line usage	456
The .spec file	458
Preparing QTicTacToe for PyInstaller	460
Dealing with non-Python files	462
Further debugging	463
<b>Summary</b>	464
<b>Questions</b>	465
<b>Further reading</b>	465

<b>Appendix A: Answers to Questions</b>	467
Chapter 1	467
Chapter 2	469
Chapter 3	471
Chapter 4	474
Chapter 5	477
Chapter 6	479
Chapter 7	482
Chapter 8	483
Chapter 9	485
Chapter 10	488
Chapter 11	491
Chapter 12	494
Chapter 13	497
Chapter 14	500
Chapter 15	502
Chapter 16	504
Chapter 17	506
<b>Appendix B: Upgrading Raspbian 9 to Raspbian 10</b>	509
<b>Other Books You May Enjoy</b>	511
<b>Index</b>	515
