Preface *xiii*

Acknowledgments *xv*

Acronyms *xvii*

Introduction *xix*

1	Carbonaceous Material Characterization	1
1.1	Material Characterization	1
1.1.1	Thermophysical Properties	1
1.1.2	Moisture Content	2
1.1.3	Ultimate and Proximate Analysis	2
1.1.4	Dielectric and Electrical Properties	2
1.2	Biomass	3
1.3	Biochar	4
1.3.1	Surface Area, Cation Exchange Capacity, and pH	7
1.4	Activated Carbon	9
1.5	Pyrolytic Graphite	9
	Bibliography	10
2	Conventional Processing Methods	13
2.1	Biomass Processing	13
2.1.1	Biomass Pyrolysis	14
2.1.2	Biomass Gasification	16
2.2	Biochar Production and Post Processing	17
2.2.1	Biochar Activation	21
2.2.1.1	Production of Activated Carbon	21
2.2.1.2	Experimental Setup	22
2.2.1.3	Procedure	23

2.2.1.4	Performance Evaluation	25
2.2.1.5	Chemical Activation	27
	Bibliography	29

3 Introduction to Plasmas 33

3.1	Thermal Plasmas	33
3.1.1	Mathematical Model	35
3.2	Nonthermal Plasmas	39
3.2.1	DC Nonthermal Electrical Discharges	40
3.2.1.1	Dark Discharge	40
3.2.1.2	Glow Discharge	42
3.2.2	Dielectric Barrier Discharge	43
3.2.3	Pulsed Discharges	44
3.2.4	Gliding Arc	45
3.2.5	Microwave-Induced Discharges	46
3.3	Impedance Matching	47
3.4	Discharges in Liquids	49
3.4.1	Contact Glow Discharge Electrolysis	49
3.4.2	Plasma Electrolysis with AC Power	52
3.4.3	Gliding Arc in Glycerol for Hydrogen Generation	52
	Bibliography	54

4 Voltage-Enhanced Processing of Biomass 59

4.1	Biomass Gasification with Thermal Plasma	59
4.1.1	Plasma Parameters	59
4.1.2	Syngas Composition	61
4.1.3	Energy Balance	63
4.1.4	Temperature Decay in Plasma/Biomass Discharge	65
4.2	Dielectric Breakdown of Biomass	67
4.2.1	Biomass-in-the-Loop	67
4.3	Biomass Gasification with Nonthermal Plasma	69
4.3.1	Tar Breakdown	69
4.3.1.1	Model Tars	70
4.3.1.2	Product Gas from Gasification/Pyrolysis	71
4.3.2	Circuit Configuration	72
4.3.3	Scaling Up of the Technology	74
	Bibliography	75

5 Voltage-Enhanced Processing of Biochar 79

5.1	DC Power Applied to Biochar	79
5.1.1	Joule Heating of Biochar	79

5.1.1.1	Case Study	80
5.1.2	Joule Heating of Activated Carbon	83
5.1.2.1	Case Study	83
5.1.3	Recent Trends in Mathematical Modelling	103
5.1.3.1	Transient One-Dimensional Hydrodynamic Model	104
5.1.3.2	Drift-Diffusion Model	108
5.2	Physical Activation of Biochar with Nonthermal Plasma	109
5.2.1	Plasma-Steam Activation	110
5.2.1.1	Commercial Activated Carbon	110
5.2.1.2	Conventional Steam Activation	110
5.2.1.3	Plasma-Enhanced Steam Activation	111
	References	111

6 Numerical Simulations 115

6.1	Background	115
6.2	Modeling Approaches	116
6.2.1	Kinetic Approach	116
6.2.2	Fluid Model Approach	118
6.3	Examples of Nonthermal Plasma Modeling	120
6.3.1	Cathode Fall of a DC Glow Discharge	120
6.3.2	RF Plasma Discharge	123
6.3.3	Plasma Chemistry	127
	References	131

7 Control of Plasma Systems 133

7.1	Control of Thermal Plasma Torches	133
7.1.1	Dynamics	134
7.1.2	Control	137
7.1.2.1	Development of Fractional Order Controller for Chaotic Behavior	137
7.2	Control of Nonthermal Plasma Discharges	140
7.2.1	Plasma Diagnostics	141
7.2.2	AI-Based Control	142
7.2.2.1	ANN Model of a Thermal Plasma Torch	144
	References	145
