Acronyms *xvii*

Introduction *xxi*

1 Basic Methods and Tools *1*

1.1 General Approach *1*

1.2 Feature Extraction: Signal and Preconditioning *2*

1.2.1 Raw Signals: What Kind of Signals and Sensors? *2*

1.2.1.1 Current Sensors *3*

1.2.1.2 Vibration Measurement and Accelerometers *13*

1.2.1.3 Temperature Sensors *14*

1.2.1.4 Field Sensors *16*

1.2.1.5 Acoustic Sensors *16*

1.2.1.6 Other Sensors *18*

1.2.2 Preconditioning *22*

1.2.2.1 Signal Features in the Time Domain *22*

1.2.2.2 Symmetric Component, Park Component *22*

1.2.2.3 Symmetric Component, Park Component *24*

1.2.2.4 Signal Features in the Frequency Domain *26*

1.2.2.5 Wavelet Analysis *34*

1.2.2.6 Instantaneous Amplitude and Frequency *35*

1.2.2.7 Bilinear Time-frequency Distributions or Quadratic

Time-frequency Distributions: Cohen's Class *36*

1.2.2.7.a Uncertainty Principle of Heisenberg *37*

1.2.2.7.b General Representation *37*

1.2.2.7.c Properties *38*

1.2.2.7.d Different Representations *39*

1.2.2.8	Statistic Features	45
1.2.2.9	Cyclostationarity	46
1.2.3	Model Approach	48
1.2.3.1	Kalman Observer	51
1.2.3.2	Extended Observer	52
1.2.3.3	Unscented Kalman Filter	55
1.2.4	Parity Space	56
1.3	Feature Reduction, Principal Component Analysis	60
1.3.1	Principal Component Analysis: A Space Reduction and an Unsupervised Classification	60
1.3.2	Intercorrelation	62
1.3.2.1	Pearson Coefficient “ r ”	62
1.3.2.2	Spearman Coefficient “ ρ ”	63
1.3.3	Information Content: Shannon Entropy	65
1.3.4	Pattern Sizing Reduction for a Supervised Classification	65
1.3.4.1	Selection Criteria	65
1.3.4.2	Sequential Backward Feature Selection and Sequential Forward Feature Selection	67
1.3.5	Pattern Sizing Reduction for an Unsupervised Classification: Laplacian Score	68
1.3.6	Choice of the Number of Classes for an Unsupervised Classification	69
1.3.6.1	Choice of the Number of Classes with a PCA	69
1.3.6.2	General Case	70
1.3.7	Other Quality Criteria of a Classification	71
1.3.7.1	R^2 index	71
1.3.7.2	Calinski–Harabasz Index	72
1.3.7.3	Davies–Bouldin Index	73
1.3.7.4	Silhouette Index	73
1.3.7.5	Dunn Index	74
1.4	Classification Methods	74
1.4.1	Generalities	74
1.4.1.1	Supervised and Unsupervised Clustering	75
1.4.1.2	Measuring the Similarity: Different Distances	76
1.4.2	Supervised Clustering	77
1.4.2.1	k Nearest Neighbors	78
1.4.2.2	Support Vector Machine	80
1.4.2.3	Recurrent Neural Network	82
1.4.3	Unsupervised Clustering	85
1.4.3.1	Hierarchical Classification	86

1.4.3.2	K-means and Centroid Clustering	89
1.4.3.3	Self-organizing Map	90
1.5	Prognosis Methods	93
1.5.1	Prognosis Process	93
1.5.2	Time Series Extrapolation Methods	95
1.5.3	Bayesian Inference	101
1.5.4	Markov Chain	103
1.5.5	Hidden Markov Models	105
1.5.6	Rainflow	110
1.5.6.1	Hidden Semi-Markov Models	114
	References	114
2	Applications and Specifics	125
2.1	General Presentation of Motor Drives	125
2.2	Electrical Machines	126
2.2.1	Basics	128
2.2.2	Magnetic Steel and Magnets	129
2.2.3	Windings and Insulation	133
2.3	Machine Models, Operation, and Control	137
2.3.1	Three-phase Windings	137
2.3.2	Induction Machines	138
2.3.2.1	Induction Machine Rotor Field Orientation	140
2.3.2.2	Direct Torque Control	141
2.3.3	Permanent Magnet AC Machines	144
2.4	Faults in Electrical Machines	146
2.4.1	Operational Variables and Measurements	147
2.4.2	Supervision, Detection, and Fault Classification	149
2.4.3	Bearings	153
2.4.4	Insulation	169
2.5	Open and Short Faults, Eccentricity, Broken Magnets and Rotor Bars	180
2.5.1	Induction Machines	182
2.5.1.1	Stator Fault Diagnosis	183
2.5.1.2	Eccentricity	191
2.5.1.3	Multi-fault Diagnosis with Stray Flux and Flux Sensor	193
2.5.1.4	Open Faults in Windings and Inverter	195
2.5.1.5	Broken Rotor Bars	196
2.5.2	Permanent Magnet AC Machines	198
2.5.2.1	Demagnetization of Permanent Magnets	198
2.5.2.2	Open and Short Circuit	201
2.5.3	Sensor Faults	208

2.5.4	Fault Mitigation and Management	209
2.6	Power Electronics and Systems	215
2.6.1	A Brief Description of Power Electronics in AC drives	216
2.6.2	A Brief Description of Static Switches	223
2.6.2.1	MOSFET	223
2.6.2.2	IGBT	230
2.6.2.3	Si and SiC Technology	236
2.6.2.4	Thermal Behavior	236
2.6.3	A Brief Description of Capacitors	241
2.6.3.1	General Description	241
2.6.3.2	Different Kinds of Capacitors	245
2.6.3.2.a	Non-polarized Capacitors	245
2.6.3.2.b	Polarized Capacitors	251
2.6.4	Device Faults and Their Manifestation	255
2.6.4.1	Basic Notion	257
2.6.4.2	On Chip Failures	258
2.6.4.3	Packaging and Chip Environment Failures	259
2.6.5	Capacitor Failure Modes	261
2.6.5.1	Failure by Degradation	261
2.6.5.2	Catastrophic Failure	262
2.6.6	Diagnosis and Prognosis Techniques for Power Devices	262
2.6.6.1	Introduction	262
2.6.6.2	Failure Modes Indicators and TSEP for Power Electronic Devices	262
2.6.6.3	Diagnosis of Failure Modes	269
2.6.6.3.a	Diagnosis based on the Direct Analysis of the Current	271
2.6.6.3.b	Diagnosis based on the Direct or Indirect Analysis of Junction Temperature	279
2.6.6.3.c	Diagnosis based on Signal Processing	284
2.6.6.3.d	Diagnosis based on Clustering	288
2.6.6.3.e	Diagnosis based on Neural Network	291
2.6.6.3.f	Synthesis	295
2.6.6.4	Prognosis of Failure Modes	295
2.6.6.4.a	Prognosis based on Failure Mechanism and Statistical Data	295
2.6.6.4.b	Prognosis based on Failure Precursors	300
2.6.7	Diagnosis and Prognosis Techniques for Capacitors	310
2.6.7.1	Fault Diagnosis Techniques	310
2.6.7.2	Methods for Predicting Electrolytic Capacitor Failures	318
	Bibliography	324

3	Fault Diagnosis and Prognosis for Reliability Enhancement	345
3.1	Introduction	345
3.2	Fundamentals	346
3.2.1	The Pattern of Failures with Time for Non-Repairable Items	350
3.2.2	Distribution Functions	350
3.2.3	Confidence in Reliability and Prognosis	353
3.3	Component Reliability	354
3.4	Reliability of Subsystems and Systems	361
3.4.1	Analysis Tools	361
3.5	Lifetime, Reliability Prediction	365
3.6	Fault Management and Mitigation	368
3.7	Design and Manufacturing	371
3.8	Applications and Case Studies	372
3.9	Scheduled Maintenance, Condition-Based Maintenance	397
3.9.1	Reliability and Costs	407
3.10	Conclusions	409
	Bibliography	410
