## PREFACE

vii

## 1. Algebraic Inequalities

1.1 Introduction	1
1.2 Definitions	3
1.3 Properties of inequalities	4
1.4 Intervals	6
1.5 Absolute values	7
1.6 Arithmetic, geometric and harmonic means	8
1.7 Some inequality relations	13
1.8 Inequalities in mathematics and physics	15
1.9 Some unsolved problems	33

## 2. Geometric Inequalities

2.1 Isoperimetric problems	39
2.2 Symmetry	45
2.3 Dispersal problems	50
2.4 Packing problems	50
2.5 Map colouring	53
2.6 Convex sets	54
2.7 Linear inequalities	55
2.8 Linear programming	60

**3. Matrix Inequalities and Stability Theory**

3.1 Quadratic forms	63
3.2 Eigenvalues and eigenvectors	67
3.3 Positive definite forms	71
3.4 Eigenvalue inequalities	73
3.5 Stability of physical systems	80
3.6 Some important differential equations	85
3.7 Stability matrices	90
3.8 Routh-Hurwitz criteria	92

**4. Differential and Integral Inequalities**

4.1 Maxima and minima of a function of one variable	94
4.2 Maxima and minima of a function of two variables	99
4.3 Lagrange multipliers	106
4.4 Harmonic functions	112
4.5 Method of least squares	114
4.6 Some integral inequalities	116

**5. The Calculus of Variations**

5.1 Introduction	120
5.2 Alternative forms of the Euler equation	125
5.3 Discontinuous solutions	131
5.4 Hamilton's Principle	134
5.5 Integrals involving higher order derivatives	138
5.6 Other problems in the calculus of variations	140
5.7 Variational principles in fundamental physics	145
5.8 Direct methods and eigenvalue problems	149

<b>Conclusion</b>	154
