Preface	page xi
1 Ionic properties	1
1.1 <i>Theory of free ions</i>	1
1.1.1 The central field approximation, 2	
1.1.2 The radial wavefunctions, 4	
1.1.3 The Coulomb interaction, 8	
1.1.4 The spin-orbit interaction, 9	
1.1.5 Hyperfine structure, 13	
1.1.6 The nuclear quadrupole interaction, 16	
1.1.7 Relativistic effects, 17	
1.2 <i>Free ions in a magnetic field</i>	19
1.2.1 The paramagnetic susceptibility, 20	
1.2.2 Effect upon hyperfine structure, 21	
1.3 <i>Ions in crystals</i>	22
1.3.1 The crystal potential, 22	
1.3.2 Operator equivalents, 23	
1.3.3 Perturbation of a Kramers' doublet, 27	
1.4 <i>Electron spin resonance</i>	29
1.4.1 The spin Hamiltonian, 30	
1.4.2 Crystal field parameters, 34	
1.5 <i>Spin lattice relaxation</i>	36
1.5.1 Theory, 37	
1.5.2 Comparison with experiment, 40	
1.5.3 Cross-relaxation, 44	
1.5.4 Other ions, 45	
1.6 <i>Spin-spin interactions</i>	46
1.6.1 Dipole interactions, 46	
1.6.2 Quadrupole interactions, 49	
1.6.3 Exchange coupling, 50	
1.7 <i>Magnetic susceptibilities</i>	53
1.8 <i>Specific heats</i>	55

2	Structural behaviour of the rare earth metals and alloys	60
2.1	<i>Crystal structures of the pure metals</i>	60
2.2	<i>Structural stability</i>	64
2.2.1	Alloying behaviour, 65	
2.2.2	The effects of temperature on the structure, 71	
2.2.3	Pressure-induced phase transitions, 75	
2.3	<i>Discussion of the structural behaviour</i>	79
2.4	<i>Elastic properties</i>	84
3	Band structures	91
3.1	<i>Symmetry considerations and the free electron theory</i>	92
3.1.1	Finite crystal potential, 95	
3.1.2	Spin-orbit coupling, 97	
3.1.3	The Fermi surface, 98	
3.2	<i>Non-relativistic methods of band structure calculation</i>	101
3.2.1	The orthogonalized plane wave method, 102	
3.2.2	Augmented plane waves, 103	
3.3	<i>Results of non-relativistic APW calculations</i>	105
3.4	<i>The relativistic augmented plane wave method</i>	108
3.5	<i>Relativistic calculations for the heavy rare earths</i>	111
3.6	<i>Positron annihilation experiments</i>	114
4	Magnetic properties	120
4.1	<i>The RKKY interaction</i>	120
4.1.1	The <i>s-f</i> interaction, 121	
4.1.2	Polarization of the conduction electrons, 123	
4.1.3	The exchange interaction, 124	
4.1.4	The generalized susceptibility $\chi(\mathbf{q})$, 126	
4.1.5	Corrections for scattering and non-spherical Fermi surfaces, 127	
4.1.6	Observable effects of the electron polarization, 128	
4.2	<i>Bulk magnetic properties</i>	129
4.2.1	Paramagnetism of the pure metals, 129	
4.2.2	Magnetization in the ordered state, 134	
4.2.3	Specific heat capacity anomalies, 139	
4.2.4	Magnetocrystalline anisotropy, 139	
4.2.5	Magnetostriction, 145	
4.2.6	Spin structures and neutron diffraction, 150	

4.2.7	Magnetic properties of rare earth-Y, -Sc and rare earth-rare earth alloys, 155	
4.2.8	Pressure effects, 160	
4.3	<i>Theory of the ordered states</i>	165
4.3.1	Classical theory of the spin structures, 165	
4.3.2	Theory of the turn angle, 168	
4.3.3	Superzone boundaries, 172	
4.3.4	Temperature dependence of the turn angle, 173	
4.3.5	The low temperature transition to ferromagnetic order, 177	
4.4	<i>Spin waves</i>	179
4.4.1	Theory of spin waves in planar ferromagnets, 179	
4.4.2	Theory of spin waves for the periodic spin structures, 182	
4.4.3	Inelastic neutron scattering experiments, 184	
4.4.4	Magnetic resonance experiments, 186	
4.4.5	Magnetic specific heat, 188	
4.5	<i>Hyperfine interactions</i>	189
4.5.1	Nuclear specific heat, 191	
4.5.2	Nuclear spectroscopy, 193	
5	Transport properties	203
5.1	<i>Electrical resistivity</i>	203
5.2	<i>Spin disorder resistivity</i>	206
5.3	<i>Spin wave scattering</i>	208
5.4	<i>The effect of superzone boundaries</i>	209
5.5	<i>Resistivity above the ordering temperature</i>	211
5.6	<i>The effects of alloying and pressure</i>	211
5.6.1	Alloying behaviour, 211	
5.6.2	Pressure effects, 214	
5.7	<i>The Hall effect</i>	214
5.8	<i>Thermal conductivity</i>	218
5.9	<i>Thermoelectric properties</i>	219
6	Rare earth compounds	225
6.1	<i>Rare earth oxides</i>	226
6.1.1	Trivalent oxides, 226	
6.1.2	Higher oxides, 227	
6.1.3	Divalent oxides, 227	
6.2	<i>Compounds formed with sulphur, selenium and tellurium</i>	233

CONTENTS

6.3	<i>Compounds with Group V elements</i>	238
6.3.1	1:1 Stoichiometry (pnictides), 238	
6.3.2	4:3 Stoichiometry, 245	
6.4	<i>Rare earth–aluminium compounds</i>	246
6.5	<i>Rare earth–transition metal compounds</i>	254
6.5.1	Compounds with the 3d-elements, 254	
6.5.2	Compounds with elements of the other transition series, 275	
6.6	<i>Noble metal compounds</i>	276
6.7	<i>Compounds with elements of Group IV A</i>	281
6.7.1	Silicon and germanium, 281	
6.7.2	Tin, 284	
6.8	<i>Some final comments</i>	286
Appendix 1 Units		295
	<i>Atomic units</i>	295
	<i>Rational relativistic units</i>	296
	<i>SI units</i>	296
	<i>Some miscellaneous units of energy</i>	298
Appendix 2 The determination of crystal field splittings		299
Subject index		303
Author index		306
