

Table of contents

Preface	8
Chapter 1. Structural forms of bridges and ecological objects	
<i>Maciej Kowal, Krzysztof Śledziewski</i>	9
1.1. Bridges classifications.....	9
1.2. Bridge elements.....	12
1.2.1. Bridge spans	12
1.2.2. Supports (extreme and intermediate).....	14
1.2.3. Bridges equipment.....	16
1.3. Material been used for bridges and ecological objects	20
1.3.1. Introduction	20
1.3.2. Concrete	23
1.3.3. Steel.....	25
1.3.4. Timber	29
1.3.5. Composites materials	30
1.3.6. Non-structural materials and fittings for animals passages	32
1.4. Aesthetic shaping of bridge.....	33
1.4.1. Aesthetics as a notion	33
1.4.2. Experiencing aesthetics	35
1.4.3. Rules of aesthetic shaping	36
1.5. Animal transitions	45
1.6. Culverts.....	46
1.6.1. Introduction	47
1.6.2. Types of culverts due to the water flow	56
1.6.3. Solid culverts.....	57
1.6.4. Shell tubes integrated with sand filling material	59
References.....	69
Chapter 2. Hydro-hydraulic analysis	
<i>Krzysztof Śledziewski</i>	72
2.1. Introduction.....	72
2.2. Hydrological calculations	72
2.2.1. River basin.....	72
2.2.2. Probability flow	75
2.2.3. Design flow calculation method.....	76
2.3. Bridge clearance.....	77
2.3.1. Calculation of the bridge clearance	77
2.3.2. Calculation of the clearance of small bridges.....	80
2.3.3. Bottom washout in bridge section	82
2.3.4. Water swelling before bridge	85
2.4. Example	90
2.4.1. Hydrological calculations of a permanent bridge.....	90
2.4.2. Permanent bridge hydraulic calculations.....	92

2.4.3. Calculations of permanent bridge clearance.....	95
References.....	98
Chapter 3. Basics of design	
<i>Krzysztof Śledziewski, Maciej Kowal</i>	99
3.1. Eurocodes and ULS, SLS.....	99
3.1.1. European standards.....	99
3.1.2. Limit states (ULS and SLS)	100
3.1.3. Combination of actions	102
3.1.4. Representative values and design values of actions	105
3.2. Bridge loads	108
3.2.1. Introduction	108
3.2.2. Permanent loads	110
3.2.3. Road bridge load scheme	110
3.2.4. Footbridge and sidewalk load.....	114
3.2.5. Railway bridge load schemes	115
3.2.6. Other loads	116
References.....	118
Chapter 4. Classical and numerical methods in bridge design	
<i>Michał Jukowski, Krzysztof Śledziewski, Sławomir Karaś</i>	120
4.1. Bridge design	120
4.2. J. Courbon method	121
4.2.1. The basic variant	121
4.2.2. General variant	127
4.3. Numerical modeling.....	130
References.....	148
Chapter 5. Monitoring of environmental structures and facilities	
<i>Krzysztof Śledziewski, Wioleta Czarnecka, Sławomir Karaś</i> <i>Maciej Kowal, Michał Jukowski</i>	149
5.1. Environment and road-bridge engineering.....	149
5.2. Management of the environment and ecology	149
5.2.1. Introduction	149
5.2.2. Methods of environmental analysis.....	150
5.2.3. State Environmental Monitoring	151
5.2.4. Environmental management tools	152
5.2.5. Environmental Information	152
5.2.6. Example ecological environment monitoring	153
5.3. Struggle with unclear perspective and environmental proposals	156
5.4. Environmental protection facilities	158
5.4.1. Introduction	158
5.4.2. Atmosphere protection against pollution caused by transport.....	160
5.4.3. Noise protection	161
5.4.4. Aquatic environment protection	163

5.4.5. Soil protection	163
5.4.6. Emission standards and limits	164
5.5. Measuring, monitoring and identification of threats	165
5.5.1. Continuous and periodic measurements of the extent and distribution of harmful emissions	165
5.5.2. Environment monitoring in the surrounding of bridges	169
5.6. Modern measurement capabilities	172
5.6.1. Introduction	172
5.6.2. Sensing elements	174
5.6.3. GPS stations	177
5.6.4. Video monitoring	178
5.7. Load tests used in bridge monitoring	179
5.7.1. The essence of the acceptance tests	179
5.7.2. Types of load testing	180
5.7.3. Load test project	182
5.7.4. Assessment of structure with a load testing	188
References	191

Chapter 6. Maintenance of bridges

<i>Maciej Kowal, Sławomir Karaś, Krzysztof Śledziewski, Michał Jukowski..</i>	196
6.1. Introduction	196
6.2. Maintenance and reliability of bridge objects	197
6.2.1. Passive maintenance	197
6.2.2. Reliability assessment and critical case assessment	204
6.2.3. Standard schemes of bridge diagnosing	207
6.3. Durability of bridge objects	210
6.3.1. Bridge load increase	210
6.3.2. Design allowing the structure adjustment to future roles	214
6.3.3. Designing bridges to last for 70 to 100 years	218
6.4. Periodic inspection of the technical state of a bridge	220
6.4.1. Provisions and methodology	220
6.4.2. Road bridge inspection	231
6.4.3. Rail bridge inspection	239
References	246
