PREFACE	xi
1. DIGITAL SIGNAL PROCESSING	1
1.1 Introduction 1	
1.2 Algorithm Format 7	
1.3 Scope 8	
1.4 References 9	
2. SIGNALS AND SAMPLED DATA	10
2.1 Introduction 10	
2.2 Types of Signals 10	
2.3 The Sampling Theorem 14	
2.4 The z-Transform 17	
2.5 Digital Transfer Functions 18	
2.6 References 20	
3. DISCRETE FOURIER TRANSFORM ROUTINES	21
3.1 The Discrete Fourier Transform 21	
3.2 The Fast Fourier Transform 22	
3.3 Forward Transform and Frequency Index 22	
3.4 Redundancy in the DFT 24	
3.5 The Inverse Transform 26	
3.6 DFT and FFT Algorithms 27	
3.7 Storage Requirements 27	
3.8 Data Sequence Length Restrictions 29	
3.9 Calling Sequences 29	
3.10 Examples 31	
3.11 Theory of Operation 37	
3.12 Summary of Calling Sequences 39	

3.13	Exercises	40	
3.14	References	43	
4.	ROUTINES FOR RANDOM NUMBERS, SPECTRAL ANALYSIS, AND COHERENCE ESTIMATION		45
4.1	Introduction	45	
4.2	The Periodogram	45	
4.3	Averaged Periodograms of Overlapped Data Segments	48	
4.4	Average Periodogram Routine	49	
4.5	Random Number Routine	52	
4.6	Power Spectra of Random Sequences	55	
4.7	Cross-Spectrum Routine	61	
4.8	Power Spectral Relationships	66	
4.9	The Coherence Function	67	
4.10	Summary of Calling Sequences	73	
4.11	Exercises	74	
4.12	References	77	
5.	FREQUENCY AND TIME-DOMAIN RESPONSE ROUTINES		79
5.1	Introduction	79	
5.2	The Frequency Response of a Linear System	79	
5.3	Frequency-Response Routine	83	
5.4	Direct-Form Examples	85	
5.5	Cascade and Parallel Examples	86	
5.6	Noncausal Examples	90	
5.7	Time-Domain Response Routine	92	
5.8	Summary of Calling Sequences	95	
5.9	Exercises	96	
5.10	References	97	
6.	DIGITAL FILTERING FUNDAMENTALS		99
6.1	Introduction	99	
6.2	Types of Filters	101	
6.3	Direct-Form IIR Digital Filtering	103	
6.4	Cascade-Form IIR Digital Filtering	109	
6.5	Parallel-Form IIR Digital Filtering	111	
6.6	FIR Digital Filters	113	
6.7	Digital Filtering via an IIR Lattice Structure	115	
6.8	Summary of Calling Sequences	118	
6.9	Exercises	119	
6.10	References	120	

7. IIR FILTER DESIGN	122
7.1 Introduction	122
7.2 Filter Design via Analog Conversion	124
7.3 Butterworth Filter Design	134
7.4 Chebyshev Filter Design	140
7.5 Bessel Filter Design	147
7.6 A General IIR Design Routine	152
7.7 Summary of Calling Sequences	157
7.8 Exercises	158
7.9 References	160
 8. FIR FILTER DESIGN	 162
8.1 Introduction	162
8.2 FIR Design via the Ideal Low-Pass Filter	163
8.3 Time-Domain Window Functions	165
8.4 Low-Pass FIR Filter Design Routine	168
8.5 Generalized FIR Digital Filter Design	174
8.6 Summary of Calling Sequences	179
8.7 Exercises	180
8.8 References	181
 9. FAST CONVOLUTION AND CORRELATION	 182
9.1 Introduction	182
9.2 Notation and Basic Theory	182
9.3 Routines for Fast Convolution and Correlation	189
9.4 Examples of Correlation and Convolution	191
9.5 Further Theory	199
9.6 Summary of Calling Sequences	200
9.7 Exercises	200
9.8 References	202
 10. DECIMATION AND INTERPOLATION ROUTINES	 204
10.1 Introduction	204
10.2 Linear Decimation and Interpolation	209
10.3 Interpolation Using Zero Insertion	212
10.4 Further Theory and Applications	220
10.5 Summary of Calling Sequences	224
10.6 Exercises	224
10.7 References	226

11. LEAST-SQUARES DESIGN AND MODELING	227
11.1 Introduction	227
11.2 Curve Fitting via the Normal Equations	228
11.3 Curve Fitting via Orthogonal Polynomials	232
11.4 Levinson's Algorithm	239
11.5 Durbin's Algorithm	244
11.6 Summary of Calling Sequences	248
11.7 Exercises	249
11.8 References	251
12. ADAPTIVE SIGNAL PROCESSING	252
12.1 Introduction	252
12.2 The Basic Adaptive System	253
12.3 The LMS Algorithm	254
12.4 Miscellaneous Applications	262
12.5 Summary of Calling Sequences	269
12.6 Exercises	270
12.7 References	272
13. PARAMETER ESTIMATION AND WAVEFORM ANALYSIS	274
13.1 Introduction	274
13.2 Basic Statistical Parameter Estimation	274
13.3 Waveform Analysis Via Curve Fitting	276
13.4 Estimation of Rise or Fall Times	283
13.5 Summary of Calling Sequences	287
13.6 Exercises	289
13.7 References	290
14. DATA WINDOWS, PHASE UNWRAPPING, AND UNUSUAL TRANSFORMS	291
14.1 Introduction	291
14.2 Data-Window Routines	291
14.3 Phase-Unwrapping Routine	295
14.4 A Hilbert Transform Routine	297
14.5 A Chirp z-Transform Routine	302
14.6 Walsh Functions and Transforms	306
14.7 Summary of Calling Sequences	307
14.8 Exercises	309
14.9 References	311
APPENDIX A: SUBPROGRAM LISTINGS IN FORTRAN	312
APPENDIX B: PLOTTING ROUTINES	341
INDEX	343
