<i>Preface</i>	vii
0. Introduction and Notation	1
0.1 Notational Conventions	3
0.1.1 Indices and Exponents	3
0.1.2 Constants	3
0.1.3 Measure Spaces and Related Spaces	4
0.1.3.1 Lebesgue Spaces	4
0.1.3.2 Weighted Lebesgue Spaces	5
0.1.4 Interpolation Spaces	5
0.1.5 Linear Mappings Between Normed Spaces	5
0.1.6 Other	6
1. Carlson's Inequalities	9
1.1 Carlson's Proof	10
1.2 Hardy's Proofs	14
1.3 An Alternate Proof	17
1.4 Carlson's Inequality for Finite Sums	17
2. Some Extensions and Complements of Carlson's Inequalities	21
2.1 Gabriel	21
2.2 Levin	22
2.3 Caton	24
2.4 Bellman	25
2.5 Two Discrete Carlson By-products	25
2.6 Landau and Levin-Stečkin	26

2.7	Some Extensions of the Landau and Levin–Stečkin Inequalities	28
2.7.1	The Case $p = 1$	29
2.7.2	General p	30
2.8	Proofs	31
2.9	Levin–Godunova	36
2.10	More About Finite Sums	41
3.	The Continuous Case	47
3.1	Beurling	55
3.2	Kjellberg	57
3.3	Bellman	62
3.4	Sz. Nagy	65
3.5	Klefsjö	67
3.6	Hu	68
3.7	Yang–Fang	69
3.8	A Continuous Landau Type Inequality	70
3.9	Integrals on Bounded Intervals	72
4.	Levin’s Theorem	77
5.	Some Multi-dimensional Generalizations and Variations	85
5.1	Some Preliminaries	85
5.2	A Sharp Inequality for Cones in $\mathbb{R}^n$	89
5.3	Some Variations on the Multi-dimensional Theme	95
5.3.1	Kjellberg Revisited	95
5.3.2	Andrianov	96
5.3.3	Pigolkin	98
5.3.4	Bertolo–Fernandez	99
5.3.5	Barza et al.	100
5.3.6	Kamaly	101
5.4	Some Further Generalizations	102
5.4.1	A Multi-dimensional Extension of Theorem 3.6	103
5.4.2	An Extension of Theorem 5.8	107
6.	Some Carlson Type Inequalities for Weighted Lebesgue Spaces with General Measures	111
6.1	The Basic Case	111
6.2	The Product Measure Case – Two Factors	120

6.3 The General Product Measure Case	127
7. Carlson Type Inequalities and Real Interpolation Theory	129
7.1 Interpolation of Normed Spaces	129
7.2 The Real Interpolation Method	130
7.2.1 The K -method	131
7.2.2 The J -method	131
7.2.3 The Equivalence Theorem	132
7.2.4 The Classes $\mathcal{C}_J$ and $\mathcal{C}_K$	132
7.2.5 Reiteration	133
7.2.6 Interpolation of Weighted Lebesgue Spaces	134
7.3 Embeddings of Real Interpolation Spaces	134
8. Further Connection to Interpolation Theory, the Peetre $\langle \cdot \rangle_\varphi$ Method	139
8.1 Introduction	139
8.2 Carlson Type Inequalities as Sharpenings of Jensen's Inequality	142
8.3 The Peetre Interpolation Method and Interpolation of Orlicz Spaces	147
8.4 A Carlson Type Inequality with Blocks	150
8.5 The Calderón–Lozanovskii Construction on Banach Lattices	158
9. Related Results and Applications	169
9.1 A Generalization of Redheffer	169
9.2 Sobolev Type Embeddings	171
9.3 A Local Hausdorff–Young Inequality	172
9.4 Optimal Sampling	173
9.5 More on Interpolation, the Peetre Parameter Theorem	174
9.6 Carlson Type Inequalities with Several Factors	177
9.7 Reverse Carlson Type Inequalities	178
9.8 Some Further Possibilities	180
9.8.1 Other Function Spaces	180
9.8.2 Matrix Weights	181
9.9 Necessity in the Case of a General Measure	181
Appendix A A Historical Note on Fritz David Carlson (1888–1952)	183

Appendix B A Translation of the Original Article by Carlson from French to English	187
<i>Bibliography</i>	193
<i>Index</i>	199
