Preface.....xix

Authorxxi

Chapter 1 Hybrid Energy Systems—Strategy for Decarbonization..... 1

1.1 Introduction 1

1.2 Hybrid Energy Systems Defined 4

1.3 Examples of Hybrid Energy Systems 8

1.3.1 Hybrid Solar-Wind Renewable Systems..... 8

1.3.2 Combined Heat and Power Hybrid Energy System..... 12

1.4 Outline of the Book 16

References 18

Chapter 2 Hybrid Energy Systems for Building Industry..... 19

2.1 Introduction 19

2.1.1 Concept of Zero-Energy Buildings 20

2.1.2 Grid Connection 21

2.1.3 Fuel Switching..... 22

2.1.4 Renewable Energy Credits 22

2.1.5 Energy Supply Options and Priorities..... 22

2.2 Customer Automation and Energy Management Systems 26

2.2.1 Dynamic Pricing and Demand Response 28

2.2.2 Process for Renewable Energy Building
Connection to the Electrical Grid 30

2.3 Role of Hybrid Energy Systems in Net Zero-Energy
Buildings..... 32

2.4 Solar Thermal with Storage..... 34

2.4.1 Solar-Boosted Heat Pump 35

2.4.2 Building Integrated Solar Thermal Technologies
and Their Applications..... 36

2.5 Solar Electric PV with Storage..... 37

2.6 Hybrid PV/Solar Thermal Concept 42

2.7 Building-Integrated Options (BiPVT/a) 43

2.7.1 Works on Window Systems..... 46

2.7.1.1 Building-Integrated Window Systems
(BiPVT/w)..... 47

2.7.2 Heat-Pump Integration (PVT/Heat Pump)..... 48

2.7.3 PVT-Integrated Heat Pipe 49

2.7.4 PVT Trigeneration..... 49

2.7.5 Commercial Aspects 50

2.8 Solar PVT with Geothermal Heat Pump..... 50

2.9	PV/Wind/Storage Hybrid Energy System	54
2.9.1	Pros and Cons of Hybrid PV-Wind Energy Systems.....	57
2.9.2	Theoretical Case Studies for PV-Wind Hybrid Energy System.....	57
2.10	Other Issues and Innovations for Hybrid Energy for Buildings.....	59
2.10.1	Hybrid Electric Building Design.....	59
2.10.2	Hybrid Energy Modules for Improving Building Efficiency in the Future Electric Grid.....	60
2.10.3	Economics of Renewable Hybrid System for Residential Purpose.....	61
	References	62
Chapter 3	HESs for Carbon-Free District Heating and Cooling	71
3.1	Introduction	71
3.1.1	Drivers for DHC	76
3.2	Small Hybrid Fossil-Renewable Heating and Cooling Grids	76
3.3	DH by Biomass Based HES	78
3.3.1	DH with CHP	79
3.3.2	Some Examples of Hybrid Biomass-Based DH in Europe	81
3.3.3	Hybrid-Solar-Biomass DH	82
3.4	Hybrid Geothermal DH.....	84
3.4.1	Hybrid Modular Geothermal Heat Pump for District Heating	86
3.4.2	Solar Thermal Recharge and Sewer Heat Recovery	87
3.4.3	The Multisource Hybrid Concept.....	87
3.5	Decarbonizing District Heating with Hybrid Solar Thermal Energy.....	88
3.6	District Heating with Hybrid Wind Energy	93
3.7	District Heating with Small Modular Nuclear Reactors by Hybrid Process of Cogeneration.....	93
3.7.1	Global Assessment of Modular Nuclear Heat-Based District Heating.....	96
3.8	District Heating by Hybrid Industrial Waste Heat	101
3.9	Optimization Models for Hybrid District Heating Systems	107
3.10	Role of TES in District Heating	109
3.10.1	Energy Central	113
3.11	Hybrid DE in US	114
3.11.1	Examples of Use of DE in US	115
	References	120

Chapter 4	Hybrid Energy Systems for Vehicle Industry	129
4.1	Introduction	129
4.2	Hybrid Energy in Maritime Industry	129
4.2.1	Boats, Yachts, and Ferries	129
4.2.2	Role of Renewable Sources in Shipping Industry	134
4.2.3	Hybrid Ships and Roles of Renewable Sources and Energy Storage	137
4.2.4	Energy Storage and Usage in Ships	140
4.2.5	GE Naval Vessel Electrification	140
4.2.6	Hybrid Energy for Large Ships	141
4.2.7	Use of Hybrid Microgrids for Ships	145
4.2.8	Future Marine Power Systems	147
4.2.8.1	Maritime Microgrids	149
4.2.9	Hybrid Power Module	152
4.2.10	Hybrid Fuel Cell-Based Ships	153
4.3	Hybrid Energy for Air Vehicles	154
4.3.1	Hybrid Aircraft	154
4.3.2	Unmanned Aerial Vehicles	156
4.3.3	Manned Solar Aircraft	157
4.3.4	Solar Electric, Hybrid, and Hydrogen Aircraft	158
4.3.5	Integrated EMS for Hybrid Electric Aircraft	162
4.4	Hybrid Trains and Railways	167
4.4.1	Solar-Powered Train System	168
4.4.2	Hybrid Electric Railway	170
4.4.3	Energy Storage Technology for Hybrid Electric Railway	174
	References	175
Chapter 5	Hybrid Energy Systems for Coal Industry	183
5.1	Introduction	183
5.2	Coal-Based Hybrid Power Plants	184
5.2.1	Cocombustion of Coal and Biomass	184
5.2.2	Cofiring Coal-Natural Gas	184
5.2.2.1	Options for Natural Gas Addition	186
5.2.3	Coal-Solar Hybrid for Power and Fuels	187
5.2.3.1	Advantages of Coal-Solar Hybridization	188
5.2.3.2	Disadvantages of Coal-Solar Hybridization	190
5.2.4	Role of Wind Energy	193
5.2.5	Carbon Capture from Biomass and Cofired Plants	194
5.2.6	Conversion of Carbon Dioxide to Power by Fuel Cell Technology or to Diesel Fuel	195
5.2.7	Combined Cycle to Improve Efficiency	195

5.2.8	Conversion of Waste Heat to Power or Additional Industrial Use	195
5.3	Coal-Biomass Cogasification.....	196
5.4	Hybrid Power by IGCC Plants.....	198
5.4.1	Commercial Cogasification IGCC Plants.....	201
5.4.1.1	ELCOGAS IGCC Plant, Puertollano, Spain	201
5.4.1.2	The Willem Alexander IGCC Plant, Buggenum, The Netherlands	202
5.4.1.3	Polk IGCC Plant, Florida, USA.....	203
5.4.2	Other Cogasification Projects and Proposals	204
5.5	Liquid Synthetic Fuels by Cogasification.....	204
5.6	Hybrid Energy Systems for Coal to Chemicals.....	206
5.6.1	Nuclear-Coal Integration System	207
5.6.2	Wind/Solar-Coal Integration System	209
5.6.3	Biomass-Coal Integration System	209
5.6.4	Carbon Tax Impact on the Economic Competitiveness of Hybrid Energy System.....	210
5.6.5	Carbon-Neutral Cycle via CO ₂ Capture and Conversion System	210
5.7	Novel Hybrid Processes Combining Coal/Biomass to Chemicals and Hydrogen Production.....	211
5.7.1	NREL Hybrid Concepts (USA) (Gasification/ Cogasification + Electrolysis)	212
5.7.2	CRL Energy, New Zealand (Coal/Biomass Cogasification + Electrolysis)	214
5.7.3	Other Hybrid Projects for Chemicals and Hydrogen	216
	References	217
Chapter 6	Hybrid Energy Systems for Nuclear Industry	223
6.1	Introduction	223
6.2	Diversity of Hybrid Energy Systems	224
6.3	Nuclear-Renewable Hybrid Energy Systems.....	226
6.4	Nature of Interactions in Components of N-RES Hybrid Energy Systems	229
6.4.1	Tightly Coupled N-R HES for Power and Heat	230
6.4.2	Thermal Interconnections of Components of N-RES Hybrid Energy Systems	230
6.4.3	Electricity Interconnections of Components of N-RES Hybrid Energy Systems	236
6.4.4	Chemical Interconnections of Components of N-RES Hybrid Energy Systems	239
6.4.5	Hydrogen Interconnections of Components of N-RES Hybrid Energy Systems	241

6.4.6	Mechanical Interconnections of Components of N-RES Hybrid Energy Systems	242
6.4.7	Information Interconnections of Components of N-RES Hybrid Energy Systems	243
6.4.8	System-Level Considerations for N-R HES Development.....	243
6.5	Industrial Applications of N-R HES	246
6.6	Tools Required for Successful N-R HES Applications	250
6.6.1	Dynamic Modeling Tools for N-R HES Impact Assessment, Design Optimization, and Nuclear Reactor Design Studies	250
6.6.2	Thermal Hydraulics and Electricity Interconnections	251
6.6.3	Power Generation and Storage Systems	252
6.6.4	Control, Safety, Security, and Licensing	253
6.7	Case Studies.....	253
6.7.1	Case Studies 1 and 2: West Texas Synthetic Gasoline and Arizona Desalination Plant.....	253
6.7.2	Case Study 3: N-R HES for Hydrogen Production	257
	References	261

Chapter 7	Hybrid Energy Systems for Manufacturing Industry.....	271
7.1	Introduction	271
7.2	Methods for Improving Energy Efficiency by HESs	276
7.2.1	Process Heating Systems (Including Steam for Unit Operations)	276
7.2.2	Motor-Driven Systems.....	280
7.2.3	Process Intensification.....	280
7.3	Hybrid Energy Systems Which Include Waste Heat Recovery and Conversion.....	280
7.3.1	CHP Systems.....	283
7.3.2	Cogeneration Using Nuclear Heat.....	285
7.3.3	Options for Waste Heat to Power	286
7.3.3.1	Thermodynamic Cycles.....	286
7.3.3.2	Thermoelectric Power.....	287
7.3.3.3	Thermophotovoltaic Devices.....	291
7.3.3.4	Thermionic Devices.....	292
7.3.3.5	Piezoelectric Devices.....	293
7.3.3.6	Heat Pumps for Process Heat	293
7.4	Role of Biomass Systems for Industrial Processes.....	295
7.4.1	Biomass-Based Hybrid Systems.....	295
7.5	Role of Geothermal Energy.....	299
7.5.1	Vapor Recompression.....	300
7.5.2	Geothermal Heat for Chemical Industry.....	300

7.6	Role of Hybrid Solar Thermal Energy	301
7.6.1	Solar Cooling.....	303
7.7	Potential of Renewable Energy Technologies for Industrial Electricity Use.....	304
7.8	Realizable Economic Potential of Renewable Energy Integration	305
7.8.1	Priority Areas of Action	307
7.9	Reduction in GHG Emission by Clean Energy Alternatives	308
7.10	Closing Perspectives	312
	References	315
Chapter 8	Hybrid Energy Systems for O&G Industries.....	323
8.1	Introduction	323
8.2	Drivers for Hybrid Renewable Energy Systems for Oil and Gas Industry	325
8.2.1	Depletion of High-Quality Oil Reserves.....	325
8.2.2	Environmental Concerns in the O&G Industry	326
8.2.3	Falling Renewable Energy Costs.....	327
8.3	Challenges to Renewable Integration	328
8.3.1	Variability of Generation.....	328
8.3.2	System Reliability	329
8.3.3	Operational Considerations	329
8.3.4	Government Policies	330
8.4	Hybrid Systems.....	332
8.4.1	Evaluation and Successful Case Studies	333
8.5	Hybrid Power Systems for Offshore Units	334
8.6	Upstream: Renewable Integration in Oil and Gas Production	335
8.6.1	Electrification of Drilling and Primary Recovery	336
8.6.2	Use of Hybrid Renewable-Energy-Powered Secondary Recovery.....	337
8.6.3	Concentrating Solar and Geothermal Heat for Tertiary Recovery (EOR)	338
8.6.4	Examples of Successful Case Studies	339
8.6.4.1	Photovoltaic Hybrid Systems.....	339
8.6.4.2	Wind Power Systems	340
8.6.4.3	Use of Geothermal Energy	341
8.6.4.4	Solar Thermal Systems.....	342
8.6.5	Closing Perspectives.....	342
8.7	Midstream: Integration of Hybrid Renewable Energy Systems in Oil and Gas Transportation.....	343
8.7.1	Compressor Electrification, Heat Recovery, and Use of Turbo Expanders	344
8.8	Downstream: Integration of Hybrid Renewable Energy Systems in Oil Refining.....	345

- 8.8.1 Cogeneration (Heat and Power) and Use of Hybrid Renewable Energy Systems347
 - 8.8.2 Hydrogen Production..... 348
 - 8.8.3 Other Efforts to Hybridized Oil and Gas with Renewable Energy350
- 8.9 Perspectives on Use of Renewable Energies for Oil.....352
- 8.10 Natural Gas-Renewable Sources Hybrid Systems.....353
 - 8.10.1 Temporal Framework354
 - 8.10.2 Collaborative Market Redesign.....354
 - 8.10.3 Perspectives on Low- and Zero-Emission Hybrid Generation357
 - 8.10.4 Role of Storage in Hybrid Generation 360
 - 8.10.5 Low-Carbon Renewable Fuel Storage and Transmission.....361
 - 8.10.6 Renewable Fuel Injection in the Grid.....362
- References 367

Chapter 9 Hybrid Energy Systems for Computing and Electronic Industries.... 379

- 9.1 Introduction379
- 9.2 The Case of Hybrid Approach for Data Centers381
- 9.3 Hybrid Processes to Improve Energy Efficiency of Data Centers 384
- 9.4 Role of Hybrid Renewable Energy for Data Centers.....386
 - 9.4.1 Technology Capabilities388
 - 9.4.2 Implementation Challenges.....388
 - 9.4.3 Benefits389
 - 9.4.4 Hybrid Renewable Energy Green-Works Framework for Data Centers 390
 - 9.4.4.1 Hybrid Renewable Energy Systems.....391
 - 9.4.4.2 Energy Balance Challenge.....392
 - 9.4.4.3 The Green Works Framework393
- 9.5 Hybrid Storage Devices for Data Centers396
- 9.6 Forms of Hybrid Energy in Data Centers..... 400
 - 9.6.1 Heat Integration.....400
 - 9.6.2 Demand Response.....401
 - 9.6.3 Innovative Use of Backup Power 402
- 9.7 Hybrid Energy Harvesting for Portable Electronics..... 402
 - 9.7.1 Hybrid, Multisource Energy Harvesters 403
 - 9.7.1.1 Magnetic and Kinetic Energy 403
 - 9.7.1.2 Kinetic and Solar Energy 405
 - 9.7.1.3 Wind and Thermal Energy 405
 - 9.7.1.4 Solar, Kinetic, and Radio Frequency Energy..... 406
 - 9.7.1.5 HCs for the Harvesting of Solar and Mechanical Energy 407

9.7.1.6	HCs for the Harvesting of Biomechanical and Biochemical Energy.....	407
9.7.1.7	HCs for the Harvesting of Solar and Thermal Energy	408
9.7.1.8	Hybrid Energy via Microscale Waste Heat Applications	408
9.7.1.9	Harvester-Sensor Integrations	410
9.7.2	Self-Powered Hybrid Micro-/Nanosystems.....	410
9.8	Energy Harvesters Integrated with Energy Storage AND/OR End Users	411
9.8.1	Harvester-Storage Integrations.....	411
9.8.2	Hybrid Nanogenerators	411
9.8.3	Wearable Devices of ESSs and Nanogenerators	415
9.8.4	CMOS Technology-Based Harvesters and Systems.....	415
9.9	Hybrid Energy Storage for Low-Power Embedded Systems Applications.....	416
9.9.1	Integrating Faradaic and Capacitive Storage Mechanisms.....	419
9.10	Power Electronics for Renewable Energy Systems	420
9.10.1	DC-to-DC Converters	422
9.10.2	Inverters.....	422
	References	422

Chapter 10 Hybrid Energy Systems for Water Industry439

10.1	Introduction	439
10.2	Desalination.....	441
10.2.1	Desalination Process Alternatives.....	442
10.2.2	Efficiency Improvement through Hybrid Processes	443
10.2.3	Role of Renewable Energy in Desalination.....	447
10.3	Hybrid Solar Energy for Desalination.....	448
10.3.1	Solar-Thermal Systems.....	448
10.3.1.1	Direct Solar Thermal Desalination	449
10.3.1.2	Indirect Solar Thermal Desalination.....	449
10.3.1.3	Perspectives on Pilot and Commercial Scale Operations.....	452
10.3.2	Solar PV-Based Application.....	453
10.3.3	Hybrid Solar Thermal-Solar PV.....	455
10.4	Hybrid Wind Energy for Desalination	455
10.5	Hybrid Geothermal Energy for Desalination	462
10.6	Hybrid Wave Energy	464
10.6.1	Barge-Wave and Below Water Energy Conversion	465
10.7	Desalination by Cogeneration by Small Modular Nuclear Reactors.....	468

10.8	Future Prospects of Desalination by Hybrid Renewable Energy Sources and Cogeneration Processes	474
10.9	Hybrid Energy Systems for Wastewater Treatment.....	476
10.10	Future Role of MFC for Wastewater Treatment	481
	References	483
Chapter 11	Hybrid Energy Systems for Hydrogen Production	493
11.1	Introduction	493
11.2	Role of Biomass for Hydrogen Production.....	495
11.3	Biomass-Based Hybrid Systems	497
11.3.1	Coal-Biomass	498
11.3.2	Wastewater Treatment—Biomass	499
11.3.3	Concentrated Solar—Biomass	500
11.3.4	Nuclear—Biomass.....	503
11.3.5	Fuel Cell-Biomass	504
11.3.6	Electrolysis—Biomass	505
11.3.7	Wind—Biomass	506
11.3.8	Industrial Waste Heat-Biomass Hybridization.....	508
11.4	Hybrid Biomass Systems Recommended by NREL	508
11.5	Indirect Gasifier Hybrid System.....	509
11.5.1	Peaking Modifications.....	510
11.6	Direct Gasifier Hybrid System	511
11.7	Hybrid Energy Systems for Hydrogen Production by Electrolysis	512
11.7.1	Hybrid Renewable (Wind, Solar) Electrolysis.....	514
11.7.2	Commercial-Scale Hybrid Nuclear Heat-Based HTE	516
11.8	Economic Aspects of Green Hydrogen Production	518
	References	519
Index.....		527
