Part I

Basics of geothermal power plants

1. Various cycle configurations for geothermal power plants

3

Diego Moya, Olusola Charles Akinsipe, and Prasad Kaparaju

1.1 Introduction

3

1.2 Geothermal power plant system

3

1.2.1 Single-flash steam power plants

4

1.2.2 Double-flash steam power plants

6

1.2.3 Dry-steam power plants

9

1.2.4 Binary-organic Rankine cycle and Kalina cycle power plants

10

1.2.5 Advanced geothermal energy conversion systems—Hybrid configurations

13

1.3 Closing remarks

14

Acknowledgments

14

References

14

2. Global value chain and manufacturing analysis on geothermal power plant turbines

17

Sertaç Akar, Chad Augustine, and Parthiv Kurup

2.1 Global geothermal energy market

17

2.1.1 Global value chain and trade flow

17

2.2 Manufacturing analysis

21

2.2.1 Methodology for manufacturing analysis

21

2.3 Definition of minimum sustainable price

24

2.4 Manufacturing analysis case studies

25

2.4.1 Sensitivity analysis

26

2.5 Power plant design and performance analysis

29

2.6 Economic analysis

32

2.6.1 Decision criteria used in SAM financial model

34

2.6.2 SAM results and discussion

34

2.7 Closing remarks

39

Acknowledgments

41

References

41

3. CO₂ emissions from geothermal power plants and state-of-the-art technical solutions for CO₂ reinjection

43

Joseph Bonafin and Arianna Bonzanini

3.1 Introduction

43

3.2 NCG reinjection successful cases

45

3.2.1 Numerical simulations of NCG reinjection in the literature

46

3.3 Evaluation of the reinjection process

47

3.3.1 NCG reinjection process in case of high NCG content in geothermal steam

47

3.3.2 NCG reinjection process in case of moderate NCG content in a single-phase geothermal fluid

49

3.4 Feasibility of the reinjection process

50

3.5 Closing remarks

51

References

51

4. Life cycle assessment of geothermal power plants

53

Lorenzo Tosti, Maria Laura Parisi, and Riccardo Basosi

4.1 Introduction

53

4.2 LCA methodology

54

4.3 Impacts of geothermal energy exploitation

54

4.4 Results and discussion	55
4.4.1 Goal and scope definition	56
4.4.2 System boundaries	56
4.4.3 Life Cycle Inventory	57
4.4.4 LCA of geothermal energy production	57
4.5 Closing remarks	60
References	61

5. Social acceptance of geothermal power plants

Spyridon Karytsas and Olympia Polyzou

5.1 Introduction	65
5.2 Social acceptance of renewable energy technologies	65
5.2.1 Studies on the social acceptance of geothermal energy	66
5.3 Factors affecting community acceptance of renewable energy projects	66
5.4 Socioeconomic impacts of renewable energy projects	67
5.5 Measuring socioeconomic impacts of renewable energy projects	68
5.5.1 Defining social impacts	68
5.5.2 Significance of measuring social impacts	68
5.5.3 Stages and methods of social impact measurement	69
5.6 Cases of controversy	69
5.6.1 Berlín power plant (El Salvador)	69
5.6.2 Lower Kilauea East Rift Zone (Hawaii, United States)	70
5.6.3 Milos Island (Greece)	70
5.6.4 Mt. Apo project (Philippines)	70
5.6.5 Nisyros Island (Greece)	71
5.6.6 Tiwi power plant project (Philippines)	71
5.6.7 Upper Rhine Graben (Europe)	71
5.7 Social acceptance practices performed by geothermal operators and developers	72
5.7.1 Avoiding and reducing unfavorable impacts	72
5.7.2 Generating added benefits for surrounding communities	72
5.7.3 Public engagement	73
5.7.4 The role of public authorities	75
5.8 Closing remarks	75
References	76

Part II

Thermodynamic analysis of geothermal power plants

6. Single- and double-flash cycles for geothermal power plants

Saeid Mohammadzadeh Bina, Hikari Fujii, and Shunsuke Tsuya

6.1 Introduction	83
6.2 System description	84
6.3 Analysis	85
6.3.1 Energy analysis	85
6.3.2 Exergy analysis	87
6.3.3 Exergoeconomic calculation	87
6.3.4 Validation	88
6.4 Optimization	88
6.4.1 Single flash optimization	88
6.4.2 Double-flash optimization	89
6.5 Experimental data	89
6.6 Results and discussions	89
6.6.1 Environmental benefits	91
6.7 Closing remarks	94
References	95

7. Dry steam power plant: Thermodynamic analysis and system improvement

Muhammad Aziz and Firman Bagja Juangsa

7.1 Introduction	97
7.2 Dry steam potential	98
7.3 Conversion technology	99
7.3.1 System structure	99
7.3.2 Example of system and heat balance: Case study of the Kamojang power plant	104
7.3.3 System performance	106
7.4 Configuration and main components of dry steam systems	107
7.4.1 Demister	107
7.4.2 Steam turbine	107
7.4.3 Condenser	108
7.4.4 Cooling tower	108
7.5 System improvements	109
7.5.1 Utilization of excess steam	109
7.5.2 Improvement on each component	110
7.6 Closing remarks	110
References	110

8. Binary geothermal power plant	113		
<i>Yusuf Başoğlu, Onur Vahip Güler, and Ali Keçebaş</i>			
8.1 Introduction	113		
8.2 Binary GPP	114		
8.3 Thermodynamic analysis	116		
8.3.1 General components of the binary GPP	117		
8.4 Calculation procedure	124		
8.5 Results and discussion	127		
8.6 Closing remarks	129		
References	129		
9. Solar-geothermal power plants	131		
<i>Kosmas A. Kavadias, Panagiotis Alexopoulos, and George Charis</i>			
9.1 Introduction	131		
9.2 The concentrating solar thermal power plant	134		
9.3 Hybrid solar-geothermal plants	137		
9.4 Operational analysis	143		
9.4.1 Single-flash geothermal unit	143		
9.4.2 Double-flash geothermal unit	144		
9.4.3 Binary organic cycle	145		
9.4.4 Solar field	146		
9.5 Comparative analysis of the hybrid designs	146		
9.6 Hybrid solar-geothermal power projects	147		
9.6.1 Geothermal field "Ahuachapan" at El Salvador	147		
9.6.2 Geothermal field "Stillwater" at Nevada, United States	147		
9.7 Closing remarks	150		
References	151		
10. Thermodynamic analysis of a transcritical CO₂ geothermal power plant	153		
<i>Anil Erdogan, Onder Kizilkan, Mehmet Akif Ezan, and C. Ozgur Colpan</i>			
10.1 Introduction	153		
10.2 System description	155		
10.3 Mathematical modeling	156		
10.4 Results and discussion	159		
10.4.1 The effect of the geothermal source temperature on the performance of the systems	161		
10.4.2 The effect of the turbine inlet pressure on the performance of the systems	162		
10.4.3 The effect of the pump inlet pressure on the performance of the systems	163		
10.5 Concluding remarks	164		
References	164		
11. Double-flash enhanced Kalina-based binary geothermal power plants	167		
<i>Hadi Rostamzadeh, Milad Feili, and Hadi Ghaebi</i>			
11.1 Introduction	167		
11.2 Description of the plants	168		
11.3 Materials and methods	170		
11.3.1 Thermodynamic presumptions and evaluation	170		
11.3.2 Main performance assessment parameters	172		
11.4 Results and discussion	174		
11.5 Closing remarks	184		
References	184		
12. Combined cooling and power production from geothermal resources	185		
<i>Tahir Abdul Hussain Ratlamwala, Uzair Aziz Suria, Rao Hamza Jamil, Mohammad Mustafa Pardesi, and Mohammad Ashar Jamal</i>			
12.1 Introduction	185		
12.2 System description	186		
12.2.1 High-pressure steam power generation cycle	186		
12.2.2 Medium-pressure steam power generation cycle	188		
12.2.3 Organic Rankine cycle	188		
12.2.4 Water desalination process	189		
12.2.5 Lithium-bromide absorption cycle	189		
12.3 Thermodynamic analysis	191		
12.3.1 High-pressure steam power generation cycle	191		
12.3.2 Medium-pressure steam power generation cycle	192		
12.3.3 Organic Rankine cycle	193		
12.3.4 Thermal flash desalination	194		
12.3.5 LiBr-water vapor absorption cycle	195		

12.4 Results and discussion	196	15.2.3 Turbine	251
12.4.1 The efficiency of the system	198	15.2.4 Condenser	252
12.4.2 Varying incoming mass flow rate	198	15.2.5 Process heater	252
12.4.3 Varying ambient temperature	199	15.3 Thermodynamic system model	252
12.5 Closing remarks	204	15.4 Multiobjective optimization	252
References	205	15.4.1 Particle swarm optimization	253
13. Hydrogen production from geothermal power plants	207	15.5 Results and discussion	254
<i>Murat Ozturk and Ibrahim Dincer</i>		15.6 Closing remarks	260
13.1 Introduction	207	References	262
13.2 Geothermal hydrogen production	209	16. Artificial neural network-based optimization of geothermal power plants	263
13.3 Case study	210	<i>Gürçan Çetin, Osman Özkaraca, and Ali Keçebaş</i>	
13.3.1 System description	210	16.1 Introduction	263
13.3.2 Thermodynamic model	217	16.2 Artificial neural network	265
13.4 Results and discussion	218	16.3 ANN-based modeling of the system	268
13.5 Concluding remarks	222	16.3.1 Description of the system	268
References	223	16.3.2 Dataset and uncertainty analysis	268
14. Multiple flashing in geothermal power plants	225	16.3.3 Thermodynamic analysis	269
<i>Ron R. Roberts, Ibrahim Dincer, and Greg F. Naterer</i>		16.3.4 Modeling	270
14.1 Introduction	225	16.4 Results and discussion	271
14.2 Geothermal flash power cycles	226	16.5 Closing remarks	274
14.3 Thermodynamic analysis and performance assessment	231	References	277
14.4 Brief discussion of the obtained results	232	17. Multiobjective optimization of a geothermal power plant	279
14.5 Concluding remarks	245	<i>Shoaib Khanmohammadi, Onder Kizilkan, and Farayi Musharavati</i>	
References	245	17.1 Introduction	279
