Abstract.....4

List of Major Designations5

1. Introduction.....6

2. Sources of Degradation and Protection of the Air Quality.....9

2.1. Air Pollution of Anthropogenic Origin9

2.2. De-Dusting Devices.....13

3. Literature Review20

3.1. Experimental and Computational Methods for Assessing
the Effectiveness of ESPs.....20

3.2. Methods: FEM and RFEM25

4. FEM Model of a System of Collecting Electrodes28

4.1. System Structure, Division into Elements.....28

4.2. Elastic Strain Potential Energy and Kinetic Energy33

4.2.1. Elastic Strain Potential Energy of the Element.....33

4.2.2. The Kinetic Energy of the Element46

4.2.3. Transformation of Co-Ordinates48

4.3. Generalized Co-Ordinates, Mass and Stiffnes Matrices.....50

4.4. The Influence of Gravity Forces.....52

4.5. Models of Beam Elements.....55

4.6. Model of Connections of Electrodes with Beams67

4.7. Aggregation of Equations. Newmark's Method74

5. Verification and Validation of Models78

5.1. FEM Model Verification80

5.2. Stand Measurements.....91

5.3. FEM Model Validation.....97

6. Test Calculations.....102

6.1. Vibrations of Electrodes with Different Profiles.....103

6.2. Variants with Variable Thickness of Electrodes106

6.3. Shift of the Anvil Beam.....110

7. Conclusions and Final Comments115

Bibliography.....119

Annex A - Acceleration sensor parameters 356A02134
