

Contents

Preface.....	7
1. Weierstrass Theorems and its applications	10
1. Formal power series.....	10
2. General Weierstrass Division Theorem	15
3. Weierstrass Division Theorem.....	17
4. Weierstrass Preparation Theorem	18
5. Factorization of power series	19
6. Implicit Function Theorem.....	21
7. Hensel's Lemma	24
8. Power series in two variables	27
2. Plane algebroid curves (basic concepts).....	30
1. Algebroid curves, quadratic transformations.....	30
2. Parametrizations	35
3. Intersection multiplicity	41
4. Strong Triangle Inequality	47
5. Equisingularity	49
6. Newton diagrams	50
3. Plane algebroid branches.....	53
1. Numerical semigroups	53
2. Semigroup of a plane algebroid branch.....	60
3. Key polynomials	66
4. The Puiseux characteristic	68
5. The contact exponent	70
6. Characterization of the semigroups associated with branches	73
7. Intersection formula	77
4. Equisingularity invariants	80
1. Degree of the conductor	80
2. Double point number (delta invariant).....	83
3. Milnor number.....	84
4. Semigroup of a branch and quadratic transformations.....	86

5. The contact number	90
6. Hamburger–Noether expansions	92
5. Simple curve singularities	96
1. Finite determinacy	96
2. Classification of simple plane curve singularities in characteristic ≥ 7	102
3. Classification of simple plane curve singularities in characteristic ≤ 5	106
6. Computational aspects	112
1. Standard bases	112
2. Sagbi bases	120
3. SINGULAR examples	124
Bibliography	127
Index	132
