

CONTENTS 3

1 INTRODUCTION 5

2 SELECTED SYMBOLS 6

3 MOVING LOAD EFFECT ON TRANSPORT STRUCTURES 8

3.1 Computational models of vehicles based on FEM principles 8

3.1.1 Quarter model of the vehicle, 1D model 10

3.1.2 Half part model of the vehicle, 2D model 11

3.1.3 Spatial model of the vehicle, 3Dmodel 13

3.2 Natural frequencies and natural modes 15

3.2.1 Quarter model of front axle Tatra T815 16

3.2.2 Quarter model of rear axle Tatra T815 17

3.2.3 Plane half model Tatra T815 17

3.2.4 Spatial model Tatra T815 18

3.3 Moving load effect on bridges 21

3.3.1 Subject of the solution 21

3.3.2 Plane problem, beam model of the bridge 22

3.3.2.1 Beam model of the bridge 22

3.3.2.2 Plane model of the vehicle 23

3.3.2.3 Numerical solution 23

3.3.2.4 Results of numerical solution 24

3.3.3 Space problem, slab model of the bridge 28

3.3.3.1 Slab model of the bridge 28

3.3.3.2 Space model of the vehicle 29

3.3.3.3 Results of numerical solution 30

3.4 Moving load effect on roads 35

3.4.1 Subject of the solution 35

3.4.2 Contact problem of vehicle-road interaction 35

3.4.3 Planar models of vehicle-road interaction 36

3.4.3.1 Models with a smooth road surface 36

3.4.3.2 Models with a uneven road surface 40

3.4.4 Spatial models of vehicle-road interaction 45

3.4.5 Stress analysis under static load 48

3.4.5.1 Structure of flexible pavement 48

3.4.5.2 Design axle 49

3.4.5.3 Model description 50

3.4.5.4 Description of numerical procedure 51

3.4.5.5 Vertical displacements 51

3.4.5.6 Effective stresses in individual construction layers 53

4 COMPOSITE HOLLOW BLOCKS WITH PROPERTIES	
REDUCING DYNAMIC INTERACTIONS	56
4.1 Reducing dynamic interaction in composite hollow block	56
4.1.1 Basic assumptions of the developed solution	56
4.1.2 Rubber as structural damping material	57
4.2 Basic information about hyperelastic materials	58
4.2.1 Compressible hyperelastic Murnaghan material	59
4.2.2 Incompressible hyperelastic Zahorski material	60
4.2.3 Modelling of wave phenomena using FEM software	61
4.3 Numerical models of hollow wall blocks	62
4.3.1 Hollow block model number 1	62
4.3.1.1 Analysed model	62
4.3.1.2 Results and discussion	63
4.3.1.3 Conclusions	65
4.3.2 Hollow block model number 2	66
4.3.2.1 Analysed model	66
4.3.2.2 Results and discussion	67
4.3.2.3 Conclusion	69
4.3.3 Hollow block model number 3	69
4.3.3.1 Analysed model	69
4.3.3.2 Results and discussion	71
4.3.3.3 Conclusion	76
4.4 Numerical models of a single-layered wall	76
4.4.1 Model of a single-layered wall number 1	76
4.4.1.1 The numerical model of the analysed wall	76
4.4.1.2 Numerical results	78
4.4.1.3 Conclusions	82
4.4.2 Model of a single-layered wall number 2	82
4.4.2.1 The numerical model of the analysed wall	82
4.4.2.2 Numerical results	84
4.4.2.3 Conclusions	87
4.5 Numerical models of a two-layered walls	87
4.5.1 Numerical model details	87
4.5.2 Numerical results	89
4.5.3 Conclusions	92
4.6 Summary and final conclusions	92
5 REFERENCES	94
