

Contents

List of Abbreviations	XXVII
------------------------------------	--------------

1 The Evolution of Optical Transport Networks

<i>Rod C. Alferness</i>	1
1.1 Fundamental Developments	2
1.2 Transport Networks.....	3
1.3 Enter Optical Fiber Transmission	4
1.4 Single-Fiber Capacity as the Key Metric for Cost-Effective Optical Transmission Systems.....	5
1.5 High-Speed Time-Division Multiplexing (TDM) Transmission Systems	5
1.6 Wavelength-Division Multiplexed Transmission Systems	7
1.7 Bandwidth Management at the Optical Layer via Optical Add/Drops and Cross Connects.....	10
1.8 Driving Ultrahigh-Speed WDM and Beyond	15
1.9 Space-Division Multiplexing: The Next Era of Optical Networking ..	16
1.10 Optical Networking Applications Beyond Global Transport Networks	17
References	18

Part A Optical Subsystems for Transmission and Switching

2 Optical Fiber and Cables

<i>Takashi Sasaki, Takemi Hasegawa, Hiroki Ishikawa</i>	25
2.1 Transmission Fibers	26
2.2 Single-Mode Fibers (SMFs).....	27
2.3 Multimode Fibers (MMFs)	34
2.4 Emerging Fibers	34
2.5 Optical Fiber Cables	36
References	44

3 Optical Amplifiers

<i>Michael Vasilyev, Stojan Radic</i>	51
3.1 Erbium-Doped Fiber Amplifiers	52
3.2 Raman Amplifiers	65
3.3 Alternative Amplification Technologies	78
References	78

4 Optical Transponders

<i>Gabriella Bosco, Jörg-Peter Elbers</i>	83
4.1 Evolution of Modulation Formats and Symbol Rates	86
4.2 Intensity Modulation with Direct Detection	88
4.3 Optical Duobinary with Direct Detection	99
4.4 Differential Phase Modulation with Interferometric Detection	105
4.5 IQ Modulation with Coherent Detection	113
4.6 Transponder Architectures	123
References	130

5 Optical Transponder Components	
<i>Xi Chen, Sethumadhavan Chandrasekhar</i>	137
5.1 Lasers	138
5.2 Modulators	141
5.3 Photodetectors	146
5.4 Transmitter Hardware	147
5.5 Coherent Receiver Hardware	149
5.6 Integrated Transmitters and Receivers	152
References	152
6 DSP for Optical Transponders	
<i>Seb J. Savory, David S. Millar</i>	155
6.1 Historical Background	156
6.2 Preliminaries	157
6.3 Overview of DSP Algorithms	160
6.4 Orthonormalization and De-skew Algorithms	161
6.5 Static Equalization	161
6.6 Adaptive Equalization	164
6.7 Carrier and Timing Synchronization Algorithms	167
6.8 Forward Error Correction Coding	169
6.9 Current Research Trends	170
6.10 Future Opportunities	173
6.11 Closing Remarks	173
References	174
7 Forward Error Correction for Optical Transponders	
<i>Alexandre Graell i Amat, Laurent Schmalen</i>	177
7.1 History of Forward Error Correction in Optical Communications	179
7.2 A Glimpse at Fundamental Limits and Achievable Rates	183
7.3 Basics of Forward Error Correction	189
7.4 Soft-Decision Forward Error Correction	197
7.5 Hard-Decision Forward Error Correction	218
7.6 Coded Modulation—An Introduction	230
7.7 Evaluating Forward Error Correction Performance in Transmission Experiments	236
7.8 Conclusion and Outlook	246
References	248
8 Optical Node Architectures	
<i>Brandon Collings, Mark Filer</i>	259
8.1 Generalized Functions of an Optical Node	260
8.2 General Configuration and Functionality of a ROADM Node	261
8.3 General Performance Requirements of a ROADM Node	264
8.4 2-degree Fixed Optical Add/Drop Multiplexer (OADM) Node	265
8.5 2-degree ROADM Node	266
8.6 2- to 8-degree Broadcast-and-select Colored and Directional ROADM Node	269
8.7 2- to 8-degree Broadcast-and-select, Colorless and Directionless ROADM Node	270
8.8 4- to 16-degree Route-and-select, Colorless and Directionless ROADM Node	275

8.9	4- to 16-degree Route-and-select, Colorless, Directionless and Contentionless ROADM Node	277
8.10	Reach and Performance Dependencies.....	281
8.11	WSS Bandpass Filtering and Implications	283
8.12	Performance Monitoring and Wavelength Connection Validation...	284
8.13	Looking Forward.....	285
	References	285
9	Fiber Nonlinearity and Optical System Performance	
	<i>Alberto Bononi, Ronen Dar, Marco Secondini, Paolo Serena, Pierluigi Poggiolini</i>	287
9.1	Modeling the Optical Fiber	288
9.2	Fiber Propagation: Numerical Methods.....	290
9.3	Fiber Propagation: Analytical Perturbation Modeling	292
9.4	From FWM to GN and EGN Models.....	293
9.5	Time-Domain Perturbative Model	307
9.6	Spatially-Resolved Perturbative Models and Their Applications	312
9.7	Multiplicative Models and Their Applications	315
9.8	Model-Specific Features	317
9.9	Impact of Specific Effects on NL Modeling.....	318
9.10	Applications.....	321
9.11	Nonlinearity Mitigation	326
9.12	Capacity of the Nonlinear Channel.....	333
9.13	Conclusion	339
9.A	Conversion Among SNR, Q -Factor, MI and GMI for the AWGN Channel	340
9.B	Detailed List of Symbols, Notation, and Conventions	341
	References	342
10	Space-Division Multiplexing	
	<i>Roland Ryf, Cristian Antonelli</i>	353
10.1	Basic Concepts in Space-Division Multiplexed Optical Networks	354
10.2	SDM Point-to-Point Links	355
10.3	Fiber Modes.....	361
10.4	Representation of Modes in Fibers.....	366
10.5	Mode Coupling and Unitary Propagation in SDM Fibers.....	372
10.6	SDM Transmission Experiments.....	380
10.7	Nonlinear Effects in SDM Fibers	382
10.8	Routing in SDM Networks	385
10.9	Conclusion	386
	References	387
 Part B Core Networks		
11	Carrier Network Architectures and Resiliency	
	<i>Robert D. Doverspike</i>	399
11.1	Today's Network Architectures	400
11.2	Network Resiliency in Today's Network.....	412
11.3	Evolution of Resiliency in Optical Networks.....	426
11.4	Summary and Future Directions.....	441
	References	444

12 Routing and Wavelength (Spectrum) Assignment	
<i>Jane M. Simmons, George N. Rouskas</i>	447
12.1 Terminology	449
12.2 Shortest-Path Routing Algorithms	451
12.3 Disjoint-Path Routing for Protection	453
12.4 Routing Strategies	456
12.5 Routing Order	458
12.6 Multicast Routing	458
12.7 Wavelength Assignment	460
12.8 Wavelength Assignment Algorithms	462
12.9 One-Step RWA	464
12.10 Impairment-Aware Routing and Wavelength Assignment	467
12.11 Flexible (Elastic) Optical Networks	469
12.12 Routing and Spectrum Assignment in Elastic Optical Networks	471
12.13 Conclusion	478
References	479
13 Standards for Optical Transport Networks	
<i>Stephen J. Trowbridge</i>	485
13.1 Optical Network History	486
13.2 OTN Signal Format	489
13.3 Digital Multiplexing	494
13.4 Client Mapping Methods, Tributary Slot Mappings, and Justification	494
13.5 OTN Clients	500
13.6 OTN Beyond 100 G	505
13.7 Optical Media Layer Management	507
13.8 OTN Client Interfaces	508
13.9 Conclusions	511
13.10 Interoperable OTN Line Interfaces	511
References	512
14 Traffic Grooming	
<i>Rudra Dutta, Hiroaki Harai</i>	513
14.1 Factors Motivating Traffic Grooming	513
14.2 The Original Traffic Grooming Problem	519
14.3 Wavelength-Waveband Grooming	526
14.4 Grooming for SDM Networks	529
14.5 Conclusion: Traffic Grooming—Other Arenas	531
References	533
15 Dynamic Control of Optical Networks	
<i>Mohit Chamania, Admela Jukan</i>	535
15.1 Background and Evolution of Control Planes	536
15.2 Path Computation Element (PCE)	540
15.3 Software-defined Networking (SDN)	543
15.4 Emerging Trends for Optical Network Operation	547
15.5 Summary and Final Remarks	550
References	551

16 Cross-Layer Design	
<i>Suresh Subramaniam, Koteswararao Kondepu, Andrea Marotta</i>	553
16.1 Physical Layer Impairment Sources and Models	554
16.2 Cross-Layer Routing and Wavelength Assignment	558
16.3 PLI-Aware Survivability	563
16.4 Application-Aware Metro-Access Programmable Architecture	567
16.5 SDN-Based Resource Allocation and Path Protection	572
16.6 Application-Aware Converged Wireless-Access Resource Scheduling	574
16.7 Conclusion	579
References	579
17 Optical Network Virtualization	
<i>Jie Zhang, Ricard Vilalta, Xiaosong Yu, Victor Lopez, Alejandro Aguado Martín</i>	583
17.1 Optical Networks	583
17.2 Network Operating System	586
17.3 Network Resources Virtualization in Optical Networks	590
17.4 Virtual Optical Network (VON)	594
17.5 Network Function Virtualization in Optical Networks	598
17.6 Conclusion	605
References	605
18 Metropolitan Networks	
<i>Ashwin Gumaste</i>	609
18.1 Metro Transport Network Architecture	610
18.2 SONET/SDH	611
18.3 Optical Transport Network (OTN)	613
18.4 Metro IP/MPLS	615
18.5 Metro Optical Network	618
18.6 Metro Ethernet	621
18.7 SDN and Metro Networks	626
18.8 Network Function Virtualization (NFV)	627
18.9 Best Practices for Metro Network Design	628
18.10 Summary	629
References	629
19 Energy Efficiency in Optical Networks	
<i>Daniel C. Kilper</i>	631
19.1 Energy and Optical Networks	631
19.2 Optical Components and Equipment	637
19.3 Energy-Efficient System and Network Architectures	643
19.4 Energy-Efficient Network Design	652
19.5 Standards, Guidance, and Data Sources	657
19.6 Conclusions	658
References	658
20 Optical Packet Switching and Optical Burst Switching	
<i>Pablo Jesus Argibay-Losada, Dominique Chiaroni, Chunming Qiao</i>	665
20.1 Technology Basics	666
20.2 Optical Burst Switching: Concept and Technology	667

20.3	Optical Packet Switching: Concept and Technology.....	677
20.4	General Conclusions.....	698
	References	698

Part C Datacenter and Super-Computer Networking

21	Evolving Requirements and Trends in Datacenter Networks	
	<i>Hong Liu, Ryohei Urata, Xiang Zhou, Amin Vahdat</i>	707
21.1	Intra-Datacenter Network	709
21.2	Inter-Datacenter Network	718
21.3	Conclusion	722
	References	723
22	Evolving Requirements and Trends of HPC	
	<i>Sébastien Rumley, Keren Bergman, M. Ashkan Seyed, Marco Fiorentino</i> ..	725
22.1	Challenges of HPC	725
22.2	Defining High-Performance Computing	726
22.3	Contemporary High-Performance Interconnection Networks.....	732
22.4	Future of Optics in HPC Interconnects	746
22.5	Summary	751
	References	751
23	Intra-Datacenter Network Architectures	
	<i>Roberto Proietti, Pouya Fotouhi, Sebastian Werner, S.J. Ben Yoo</i>	757
23.1	Trends and Future Challenges of Cloud Data Centers	757
23.2	Data Center Topologies.....	760
23.3	Emerging Data Center Solutions with Photonics Technologies	766
23.4	Conclusions	774
	References	775
24	System Aspects for Optical Interconnect Transceivers	
	<i>Brad Booth, David Piehler</i>	779
24.1	Data Center Requirements.....	779
24.2	SMF Transmitter Toolkit	784
24.3	Optical Specifications	786
24.4	25 G/λ, 50 G/λ, and 100 G/λ Optical Technologies	787
24.5	Optical Packaging.....	789
24.6	The Future	792
	References	792
25	Optical Switching for Data Center Networks	
	<i>Nick Parsons, Nicola Calabretta</i>	795
25.1	Data Center Network Architecture: Requirements and Challenges ..	796
25.2	Data Center Network Architectures Based on Optical Circuit Switching.....	803
25.3	Data Center Network Architectures Based on Optical Packet/ Burst Switching.....	809
25.4	Perspective on Optical Switching Technologies in Future DCs.....	820
25.5	Conclusion and Discussion	821
	References	822

Part D Optical Access and Wireless Networks

26 Introduction to Optical Access Networks	
<i>Björn Skubic, Lena Wosinska</i>	831
26.1 Evolution of Fixed-Access Networks and Impact on Society	831
26.2 Access Network Architectures: Evolution and Trends	834
26.3 Optical Access Systems/Technologies and Standards	840
26.4 Comparison of Architectural Aspects of Different Systems and Technologies	843
26.5 Summary	847
References	847
27 Current TDM-PON Technologies	
<i>Jun-ichi Kani, Doutje van Veen</i>	849
27.1 Passive Optical Networks	849
27.2 Physical Layer Technologies	851
27.3 Access Control Technologies in TDM-PON	855
27.4 XG(S)-PON and 10G E-PON	860
27.5 Security and Privacy	864
27.6 Survivability	864
27.7 Energy Efficiency in PON	866
27.8 Technologies Beyond 10G PON	869
References	869
28 Emerging PON Technologies	
<i>Josep Prat, Luca Valcarenghi</i>	871
28.1 Hardware, PHY, and MAC of NG-PON2	872
28.2 Energy Efficiency in TWDM PONs	881
28.3 WDM-PONs	889
28.4 OFDMA-PONs	890
28.5 Ultra-Dense WDM-PONs	896
28.6 OCDMA-PONs	906
References	907
29 PON Architecture Enhancements	
<i>Thomas Pfeiffer</i>	913
29.1 Background	914
29.2 Wireless x-Haul over PON	914
29.3 Flexible Converged Metro-Access Networks Based on PON	924
29.4 Local Interconnects in Point-to-Multipoint Networks	928
29.5 Smart ODN	937
References	947
30 Long-Reach Passive Optical Networks and Access/Metro Integration	
<i>David Payne, Giuseppe Talli, Marco Ruffini, Alan Hill, Paul Townsend</i>	951
30.1 The History of LR-PON	952
30.2 Architectural Design for the End-to-End Network Using LR-PON	956
30.3 DBA and DWA Protocol Implications for LR-PON	965
30.4 Physical Layer Design	969

30.5	Experimental Results for LR-PON Architectures in End-to-End Networks	980
30.6	Summary	985
	References	985
31	Digital Optical Front-Haul Technologies and Architectures	
	<i>Fabio Cavaliere, David Larrabeiti</i>	989
31.1	Fronthaul Networks: Definitions and Terminology	989
31.2	Digital Fronthaul Standards	991
31.3	Physical-Layer Multiplexed Optical Fronthaul	993
31.4	Circuit Multiplexing of Fronthaul Links	996
31.5	Fronthaul over Packet	998
31.6	Evolution of Fronthaul Networks	1008
31.7	Conclusions	1010
	References	1010
32	Analog Optical Front-Haul Technologies and Architectures	
	<i>John E. Mitchell</i>	1013
32.1	Developments in Radio Access Networks	1014
32.2	General Overview of Analog Radio-Over-Fiber Technologies	1015
32.3	Analog Radio Over Fiber (A-RoF)	1019
32.4	Concluding Remarks	1027
	References	1028
33	Optical Networking for 5G and Fiber-Wireless Convergence	
	<i>Gee-Kung Chang, Mu Xu, Feng Lu</i>	1031
33.1	Challenges Associated with the Introduction of 5G	1032
33.2	Overview of Fiber-Wireless Integrated Fronthaul Systems in 5G	1036
33.3	Advanced Digital Signal Processing in 5G Converged Networks	1047
33.4	Summary	1054
	References	1054
34	Space Optical Links for Communication Networks	
	<i>Alberto Carrasco-Casado, Ramon Mata-Calvo</i>	1057
34.1	Principles of Free-Space Optical Communication	1058
34.2	Characteristics of the Atmospheric Channel	1068
34.3	Low-Earth-Orbit Satellite Communications	1073
34.4	Geostationary Satellite Communications	1082
34.5	Future Optical Satellite Networks	1094
	References	1099
35	Visible Light Communications	
	<i>Xin Lin, Tomokuni Matsumura</i>	1105
35.1	Overview of Visible Light Communication (VLC)	1105
35.2	Visible Light (VL) Sources	1107
35.3	VL Detectors	1112
35.4	VLC Techniques	1114
35.5	Current Applications	1119
	References	1122

36 Optical Communications and Sensing for Avionics	
<i>Alireza Behbahani, Mehrdad Pakmehr, William A. Stange</i>	1125
36.1 Fiber-Optic Communication	1125
36.2 Current and Future Flight Control Systems	1127
36.3 Fiber-Optic Sensors	1134
36.4 Conclusion	1144
References	1145
Subject Index	1151
