

Table of contents

Preface	5
Introduction	7
1. Fundamentals of matrix calculus	9
1.1. Introduction.....	9
1.2. Basic terms.....	9
1.3. Matrix operations.....	14
1.4. Square matrix determinant.....	21
1.5. Inverse matrix.....	30
1.6. Systems of linear equations.....	41
1.7. Eigenvalues and eigenvectors of matrices.....	50
2. Statics of two-dimensional bar structures – introduction	61
2.1. Stiffness matrix of a bar element.....	61
2.2. Stiffness matrix of a beam element.....	65
2.3. Stiffness matrix of a frame element.....	83
2.4. Transformation matrix.....	91
2.5. Truss element stiffness matrix.....	94
2.6. Shape functions.....	97
2.7. Construction of structural equilibrium equations system.....	103
3. Statics of bar systems subjected to axial forces	107
3.1. Example 1.....	107
3.2. Example 2.....	110
3.3. Example 3.....	118
4. Statics of beams	137
4.1. Example 1.....	137
4.2. Example 2.....	144
4.3. Example 3.....	157
4.4. Example 4.....	171
5. Statics of frames	189
5.1. Example 1.....	189
5.2. Example 2.....	203
5.3. Example 3.....	218

6. Statics of truss systems.....	235
6.1. Example 1.....	235
6.2. Example 2.....	250
6.3. Example 3.....	271
References.....	293
