

Contents

I. INTRODUCTION AND BACKGROUND

1

1. Life 2

1. Prokaryotes 2
2. Eukaryotes 6
3. Biochemistry: A Prologue 13
4. The Origin of Life 18
5. The Biochemical Literature 24

2. Aqueous Solutions 29

1. Properties of Water 29
2. Acids, Bases, and Buffers 34

3. Thermodynamic Principles: A Review 42

1. First Law of Thermodynamics: Energy is Conserved 43
 2. Second Law of Thermodynamics: The Universe Tends Towards Maximum Disorder 44
 3. Free Energy: The Indicator of Spontaneity 47
 4. Chemical Equilibria 48
- Appendix: Concentration Dependence of Free Energy 51

II. BIOMOLECULES

55

4. Amino Acids 56

1. Amino Acids of Proteins 56
2. Optical Activity 62
3. "Nonstandard" Amino Acids 67

5. Techniques of Protein Purification 71

1. Protein Isolation 72
2. Solubilities of Proteins 75
3. Chromatographic Separations 78
4. Electrophoresis 89
5. Ultracentrifugation 97

6. Covalent Structures of Proteins 105

1. Primary Structure Determination 106
2. Protein Modification 119
3. Chemical Evolution 123
4. Polypeptide Synthesis 132

7. Three-Dimensional Structures of Proteins 141

1. Secondary Structure 141
 2. Fibrous Proteins 153
 3. Globular Proteins 162
 4. Protein Stability 174
 5. Quaternary Structure 180
- Appendix: Viewing Stereo Pictures 185

8. Protein Folding, Dynamics, and Structural Evolution 191

1. Protein Folding: Theory and Experiment 191
2. Protein Dynamics 205
3. Structural Evolution 208

9. Hemoglobin: Protein Function in Microcosm 215

1. Hemoglobin Function 216
 2. Structure and Mechanism 223
 3. Abnormal Hemoglobins 235
 4. Allosteric Regulation 241
- Appendix: Derivation of Symmetry Model Equations 247

10. Sugars and Polysaccharides 251

1. Monosaccharides 252
2. Polysaccharides 258
3. Glycoproteins 266

11. Lipids and Membranes 277

1. Lipid Classification 278
2. Properties of Lipid Aggregates 285
3. Biological Membranes 290
4. Membrane Assembly and Protein Targeting 305
5. Lipid-Linked Proteins and Lipoproteins 314

III. MECHANISMS OF ENZYME ACTION

331

12. Introduction to Enzymes 332

1. Historical Perspective 333
2. Substrate Specificity 333
3. Coenzymes 337

4. Regulation of Enzymatic Activity 338
5. A Primer of Enzyme Nomenclature 343

13. Rates of Enzymatic Reactions 345

1. Chemical Kinetics 346
2. Enzyme Kinetics 351
3. Inhibition 355
4. Effects of pH 360
5. Bisubstrate Reactions 362
- Appendix: Derivations of Michaelis-Menten Equation Variants 366

14. Enzymatic Catalysis 371

1. Catalytic Mechanisms 371
2. Lysozyme 381
3. Serine Proteases 389
4. Glutathione Reductase 400

IV. METABOLISM

411

15. Introduction to Metabolism 412

1. Metabolic Pathways 414
2. Organic Reaction Mechanisms 415
3. Experimental Approaches to the Study of Metabolism 421
4. Thermodynamics of Phosphate Compounds 428
5. Oxidation-Reduction Reactions 434
6. Thermodynamics of Life 437

16. Glycolysis 443

1. The Glycolytic Pathway 444
2. The Reactions of Glycolysis 447
3. Fermentation: The Anaerobic Fate of Pyruvate 464
4. Control of Metabolic Flux 470
5. Metabolism of Hexoses Other Than Glucose 476

17. Glycogen Metabolism 484

1. Glycogen Breakdown 485
2. Glycogen Synthesis 491
3. Control of Glycogen Metabolism 493
4. Glycogen Storage Diseases 507

18. Transport Through Membranes 513

1. Thermodynamics of Transport 513
2. Kinetics and Mechanisms of Transport 514
3. ATP-Driven Active Transport 524
4. Ion Gradient-Driven Active Transport 531

19. Citric Acid Cycle 538

1. Cycle Overview 538
2. Metabolic Sources of Acetyl-Coenzyme A 541

3. Enzymes of the Citric Acid Cycle 548
4. Regulation of the Citric Acid Cycle 557
5. The Amphibolic Nature of the Citric Acid Cycle 559

20. Electron Transport and Oxidative Phosphorylation 563

1. The Mitochondrion 564
2. Electron Transport 568
3. Oxidative Phosphorylation 582
4. Control of ATP Production 593

21. Other Pathways of Carbohydrate Metabolism 599

1. Gluconeogenesis 599
2. The Glyoxylate Pathway 606
3. Biosynthesis of Oligosaccharides and Glycoproteins 608
4. The Pentose Phosphate Pathway 617

22. Photosynthesis 626

1. Chloroplasts 627
2. Light Reactions 628
3. Dark Reactions 649

23. Lipid Metabolism 662

1. Lipid Digestion, Absorption, and Transport 662
2. Fatty Acid Oxidation 666
3. Ketone Bodies 678
4. Fatty Acid Biosynthesis 680
5. Regulation of Fatty Acid Metabolism 688
6. Cholesterol Metabolism 690
7. Arachidonate Metabolism: Prostaglandins, Prostacyclins, Thromboxanes, and Leukotrienes 704
8. Phospholipid and Glycolipid Metabolism 713

24. Amino Acid Metabolism 727

1. Amino Acid Deamination 728
2. The Urea Cycle 731
3. Metabolic Breakdown of Individual Amino Acids 735
4. Amino Acids as Biosynthetic Precursors 749
5. Amino Acid Biosynthesis 764
6. Nitrogen Fixation 776

25. Energy Metabolism: Integration and Organ Specialization 785

1. Major Pathways and Strategies of Energy Metabolism: A Summary 785
2. Organ Specialization 788
3. Metabolic Adaptation 792

26. Nucleotide Metabolism 795

1. Chemical Structures of Nucleotides, Nucleosides, and Bases 795
2. Synthesis of Purine Ribonucleotides 797
3. Synthesis of Pyrimidine Ribonucleotides 803
4. Formation of Deoxyribonucleotides 806
5. Nucleotide Degradation 816
6. Biosynthesis of Nucleotide Coenzymes 822

**V. THE EXPRESSION AND
TRANSMISSION OF GENETIC
INFORMATION**

829

27. DNA: The Vehicle of Inheritance 830

1. Genetics: A Review 830
2. DNA Is the Carrier of Genetic Information 844

28. Nucleic Acid Structures and Manipulation 848

1. Chemical Structure and Base Composition 849
2. Double Helical Structures 850
3. Forces Stabilizing Nucleic Acid Structures 862
4. Nucleic Acid Fractionation 870
5. Supercoiled DNA 873
6. Nucleic Acid Sequencing 882
7. Chemical Synthesis of Oligonucleotides 896
8. Molecular Cloning 897

29. Transcription 915

1. The Role of RNA in Protein Synthesis 916
2. RNA Polymerase 919
3. Control of Transcription in Prokaryotes 930
4. Posttranscriptional Processing 944

30. Translation 959

1. The Genetic Code 959
2. Transfer RNA and its Aminoacylation 967
3. Ribosomes 981

4. Control of Eukaryotic Translation 1004

5. Posttranslational Modification 1007
6. Protein Degradation 1010

31. DNA Replication, Repair, and Recombination 1020

1. DNA Replication: An Overview 1020
2. Enzymes of Replication 1024
3. Prokaryotic Replication Mechanisms 1030
4. Eukaryotic DNA Replication 1038
5. Repair of DNA 1046
6. Recombination and Mobile Genetic Elements 1053
7. DNA Methylation and Trinucleotide Repeat Expansions 1065

32. Viruses: Paradigms for Cellular Functions 1074

1. Tobacco Mosaic Virus 1076
2. Spherical Viruses 1081
3. Bacteriophage λ 1089
4. Influenza Virus 1105
5. Subviral Pathogens 1113

33. Eukaryotic Gene Expression 1123

1. Chromosome Structure 1124
2. Genomic Organization 1133
3. Control of Expression 1148
4. Cell Differentiation 1168

34. Molecular Physiology 1196

1. Blood Clotting 1196
2. Immunity 1207
3. Motility: Muscles, Cilia, and Flagella 1234
4. Biochemical Communications: Hormones and Neurotransmission 1261

Index 1311
