Preface	xv
Acknowledgments	xvii
Author.....	xix
1 Fundamental Concepts	
1.1 Introduction.....	1-1
1.2 Mechanisms of Heat Transfer.....	1-1
1.3 Dimensions and Units	1-3
1.4 Fourier's Law of Heat Conduction	1-5
1.5 Thermal Conductivity.....	1-8
1.6 Convection Heat Transfer	1-13
1.7 Convection Heat-Transfer Coefficient.....	1-16
1.8 Radiation Heat Transfer	1-18
1.9 Emissivity and Other Radiative Properties.....	1-20
1.10 Combined Heat-Transfer Mechanisms.....	1-21
1.11 Summary	1-23
1.12 Problems.....	1-24
1.12.1 Introduction to Conduction	1-24
1.12.2 Introduction to Convection.....	1-26
1.12.3 Introduction to Radiation.....	1-27
1.12.4 Combined Mechanism Problems	1-29
2 Steady-State Conduction in One Dimension	
2.1 Introduction	2-1
2.2 One-Dimensional Conduction Equation	2-2
2.3 Plane Geometry Systems	2-5
2.3.1 Thermal Circuit.....	2-7
2.3.2 Materials in Series	2-10
2.3.3 Materials in Parallel.....	2-13
2.3.4 Plane Wall with Heat Generation	2-16
2.3.5 Overall Heat-Transfer Coefficient.....	2-18
2.4 Polar Cylindrical Geometry Systems	2-21
2.4.1 Pipe and Tube Specifications.....	2-24
2.4.2 Materials in Series	2-26
2.4.3 Cylinder with Heat Generation.....	2-29
2.4.4 Overall Heat-Transfer Coefficient.....	2-31
2.4.5 Critical Thickness of Insulation	2-34

2.5	Spherical Geometry Systems	2-37
2.6	Thermal Contact Resistance	2-39
2.7	Heat Transfer from Extended Surfaces.....	2-44
2.7.1	General Differential Equation for Extended Surfaces.....	2-45
2.7.2	Analysis of Pin Fin.....	2-48
2.7.3	Analysis of Straight Fin of Rectangular Profile	2-58
2.7.4	Straight Fins of Triangular and Parabolic Profile.....	2-61
2.7.5	Circular Fin of Rectangular Profile.....	2-65
2.8	Summary.....	2-70
2.9	Problems	2-71
2.9.1	One-Dimensional Planar Conduction.....	2-71
2.9.2	One-Dimensional Conduction in Polar Coordinates.....	2-75
2.9.3	Internal Heat Generation	2-76
2.9.4	One-Dimensional Conduction in Spherical Coordinates.....	2-77
2.9.5	Contact Resistance.....	2-77
2.9.6	Pin Fins.....	2-79
2.9.7	Straight Fins.....	2-81
2.9.8	Circular Fins.....	2-84
3	Steady-State Conduction in Multiple Dimensions	
3.1	Introduction	3-1
3.2	General Conduction Equation	3-1
3.2.1	Cartesian Coordinates.....	3-1
3.3	Analytical Method of Solution.....	3-3
3.4	Graphical Method of Solution	3-10
3.5	Conduction Shape Factor.....	3-15
3.6	Solution by Numerical Methods (Finite Differences).....	3-24
3.6.1	Normalization of Equations.....	3-25
3.6.2	Numerical Method of Solution for One-Dimensional Problems.....	3-26
3.7	Numerical Method of Solution for Two-Dimensional Problems.....	3-37
3.8	Methods of Solving Simultaneous Equations	3-47
3.9	Summary.....	3-52
3.10	Problems.....	3-53
3.10.1	Analytical Methods	3-53
3.10.2	Field Plotting: Graphical Method.....	3-54
3.10.3	Shape Factor Method: Charts	3-58
3.10.4	Normalization/Transformation of Equations	3-61
3.10.5	Numerical Methods for One-Dimensional Problems.....	3-63
3.10.6	Numerical Methods for Two-Dimensional Problems.....	3-64
4	Unsteady-State Heat Conduction	
4.1	Introduction	4-1
4.2	Systems with Negligible Internal Resistance	4-2
4.3	Systems with Finite Internal and Surface Resistances	4-8
4.4	Solutions to Multidimensional Geometry Systems.....	4-26
4.5	Approximate Methods of Solution to Transient-Conduction Problems.....	4-35
4.5.1	Numerical Methods.....	4-35
4.5.2	Graphical Method	4-46
4.6	Summary.....	4-50

4.7	Problems.....	4-50
4.7.1	Lumped Capacitance Method.....	4-50
4.7.2	Chart Solutions: Slabs, Cylinders, Spheres	4-51
4.7.3	Semi-Infinite Slabs.....	4-53
4.7.4	Multidimensional Problems.....	4-53
4.7.5	Numerical Methods.....	4-54
4.7.6	Graphical Methods	4-54
4.7.7	Project Problems	4-55
5	Introduction to Convection.....	
5.1	Introduction.....	5-1
5.2	Fluid Properties.....	5-1
5.2.1	Absolute Viscosity.....	5-2
5.2.2	Pressure.....	5-3
5.2.3	Density.....	5-3
5.2.4	Kinematic Viscosity.....	5-4
5.2.5	Surface Tension	5-5
5.2.6	Internal Energy.....	5-5
5.2.7	Enthalpy.....	5-5
5.2.8	Specific Heat.....	5-6
5.2.9	Compressibility Factor	5-7
5.2.10	Volumetric Thermal-Expansion Coefficient	5-8
5.3	Characteristics of Fluid Flow	5-9
5.4	Equations of Fluid Mechanics.....	5-10
5.4.1	Continuity Equation.....	5-10
5.4.2	Momentum Equation (or Equation of Motion).....	5-11
5.5	Thermal-Energy Equation	5-17
5.6	Applications to Laminar Flows.....	5-20
5.7	Applications to Turbulent Flows.....	5-23
5.8	Natural-Convection Problem	5-24
5.9	Dimensional Analysis.....	5-28
5.9.1	Internal Flows.....	5-31
5.9.2	External Flows.....	5-32
5.9.3	Natural Convection.....	5-33
5.10	Summary.....	5-34
5.11	Problems.....	5-36
5.11.1	Fluid Properties.....	5-36
5.11.2	Momentum Equation.....	5-36
5.11.3	Thermal-Energy Equation.....	5-37
5.11.4	Dimensional Analysis	5-39
5.11.5	Miscellaneous Problems.....	5-40
6	Convection Heat Transfer in a Closed Conduit.....	
6.1	Introduction.....	6-1
6.2	Heat Transfer to and from Laminar Flow in Circular Conduit	6-1
6.2.1	Constant Heat Flux at Wall	6-3
6.2.2	Constant Wall Temperature.....	6-11
6.2.3	Thermal Entry Length.....	6-17
6.2.4	Combined-Entry-Length Problem for Laminar Flow in Circular Duct	6-26
6.3	Heat Transfer to and from Turbulent Flow in Circular Conduit	6-31

6.3.1	Constant Heat Flux at Wall and Constant Wall Temperature.....	6-32
6.4	Heat-Transfer Correlations for Flow in Noncircular Ducts.....	6-37
6.4.1	Concentric Annular Duct.....	6-38
6.4.2	Rectangular Cross Sections.....	6-41
6.5	Summary.....	6-43
6.6	Problems.....	6-43
6.6.1	Entrance Length.....	6-43
6.6.2	Constant Wall Flux.....	6-45
6.6.3	Constant Wall Temperature.....	6-46
6.6.4	Empirical Correlations.....	6-48
6.5.5	Noncircular Cross Sections.....	6-52
6.6.6	Derivations and Theoretical Problems.....	6-53
7	Convection Heat Transfer in Flows Past Immersed Bodies.....	
7.1	Introduction.....	7-1
7.2	Boundary-Layer Flow.....	7-1
7.2.1	Laminar-Boundary-Layer Flow over Flat Plate.....	7-4
7.2.2	Constant Wall Temperature.....	7-10
7.2.3	Constant Wall Flux.....	7-17
7.2.4	General Relationship.....	7-21
7.2.5	Reynolds Analogy.....	7-21
7.3	Turbulent Flow over Flat Plate.....	7-23
7.3.1	Laminar and Turbulent Flow over Flat Plate.....	7-24
7.4	Flow Past Various Two-Dimensional Bodies.....	7-31
7.5	Flow Past a Bank of Tubes.....	7-42
7.6	Flow Past a Sphere.....	7-49
7.7	Summary.....	7-50
7.8	Problems.....	7-52
7.8.1	Flow Past a Flat Plate.....	7-52
7.8.2	Reynolds-Colburn Analogy.....	7-53
7.8.3	Flow Past Two-Dimensional Bodies.....	7-53
7.8.4	Flow Past a Tube Bank.....	7-55
7.8.5	Derivations.....	7-56
8	Natural-Convection Systems.....	
8.1	Introduction.....	8-1
8.2	Natural Convection on a Vertical Surface: Laminar Flow.....	8-2
8.3	Natural Convection on a Vertical Surface: Transition and Turbulence.....	8-14
8.4	Natural Convection on an Inclined Flat Plate.....	8-16
8.5	Natural Convection on a Horizontal Flat Surface.....	8-19
8.6	Natural Convection on Cylinders.....	8-22
8.6.1	Vertical Cylinders.....	8-22
8.6.2	Horizontal Cylinders.....	8-23
8.6.3	Inclined Cylinders.....	8-25
8.7	Natural Convection around Spheres and Blocks.....	8-25
8.8	Natural Convection about an Array of Fins.....	8-28
8.9	Combined Forced- and Natural-Convection Systems.....	8-31
8.10	Summary.....	8-32
8.11	Problems.....	8-32
8.11.1	Natural Convection: Vertical Plane Surfaces.....	8-32

8.11.2	Natural Convection: Inclined Surfaces.....	8-35
8.11.3	Natural Convection: Horizontal Plane Surfaces	8-35
8.11.4	Natural Convection: Cylinders	8-36
8.11.5	Natural Convection: Miscellaneous Geometries and Problems.....	8-38
8.11.6	Natural Convection: Fins	8-39
8.11.7	Derivations	8-40
8.12	Project Problems.....	8-43
9	Heat Exchangers	
9.1	Introduction	9-1
9.2	Double-Pipe Heat Exchangers	9-2
9.2.1	Circular Duct	9-9
9.2.2	Annular Duct.....	9-10
9.2.3	Fouling Factors.....	9-14
9.3	Shell-and-Tube Heat Exchangers.....	9-19
9.3.1	Shells.....	9-20
9.3.2	Tubes.....	9-20
9.3.3	Baffles	9-23
9.3.4	Modifications	9-23
9.3.5	Tube Side.....	9-25
9.3.6	Shell Side.....	9-27
9.3.7	True Temperature Difference	9-29
9.4	Effectiveness–Number of Transfer Units Method of Analysis	9-36
9.4.1	Effectiveness–Number of Transfer Units Equations.....	9-38
9.5	Crossflow Heat Exchangers	9-42
9.6	Efficiency of a Heat Exchanger.....	9-50
9.7	Summary	9-51
9.7.1	Double-Pipe Heat Exchangers Suggested Order of Calculations.....	9-51
9.7.2	Shell-and-Tube Heat Exchangers Suggested Order of Calculations.....	9-54
9.7.3	Crossflow Heat Exchangers Suggested Order of Calculations	9-56
9.8	Problems	9-58
9.8.1	Double-Pipe Heat Exchangers.....	9-58
9.8.2	Shell-and-Tube Heat Exchangers.....	9-61
9.8.3	Crossflow Heat Exchangers	9-63
9.8.4	Miscellaneous Problems and Equations.....	9-65
10	Condensation and Vaporization Heat Transfer	
10.1	Introduction.....	10-1
10.2	Condensation Heat Transfer	10-1
10.2.1	Laminar Film Condensation on a Vertical Flat Surface	10-2
10.2.2	Turbulent Film Condensation on Vertical Flat Surface.....	10-10
10.2.3	Laminar Film Condensation on an Inclined Flat Surface.....	10-10
10.2.4	Film Condensation on a Vertical Tube.....	10-11
10.2.5	Film Condensation on a Horizontal Tube and on a Horizontal Tube Bank....	10-12
10.2.6	Film Condensation within Horizontal Tubes.....	10-14
10.3	Boiling Heat Transfer	10-15
10.3.1	Nucleate Pool Boiling.....	10-19
10.3.2	Nucleate Pool Boiling Critical Heat Flux	10-19
10.4	Summary	10-23
10.5	Problems.....	10-23
10.5.1	Filmwise Condensation–Flat Plates.....	10-23

10.5.2	Condensation on Tubes.....	10-25
10.5.3	Boiling.....	10-26
11	Introduction to Radiation Heat Transfer	
11.1	Introduction.....	11-1
11.2	Electromagnetic Radiation Spectrum.....	11-2
11.3	Emission and Absorption at the Surface of an Opaque Solid.....	11-3
11.4	Radiation Intensity.....	11-5
11.5	Irradiation and Radiosity.....	11-9
11.6	Radiation Laws.....	11-14
11.6.1	Kirchhoff's Law.....	11-14
11.6.2	Stefan-Boltzmann Law.....	11-15
11.6.3	Planck's Distribution Law.....	11-18
11.6.4	Wien's Displacement Law.....	11-23
11.7	Characteristics of Real Surfaces.....	11-24
11.7.1	Absorptivity and Reflectivity.....	11-27
11.7.2	Transmissivity.....	11-28
11.8	Summary.....	11-31
11.9	Problems.....	11-31
11.9.1	Radiation Spectrum.....	11-31
11.9.2	Radiation Intensity.....	11-33
11.9.3	Radiation and Radiosity.....	11-35
11.9.4	Radiation Laws.....	11-35
11.9.5	Characteristics of Real Surfaces.....	11-36
12	Radiation Heat Transfer between Surfaces	
12.1	Introduction.....	12-1
12.2	View Factor.....	12-1
12.2.1	View Factor between Two Differential Elements.....	12-2
12.2.2	View Factor between Differential Element and Finite Area.....	12-4
12.2.3	View Factors for Two Finite Areas.....	12-6
12.3	Methods for Evaluating View Factors.....	12-6
12.3.1	View-Factor Algebra for Pairs of Surfaces.....	12-7
12.3.2	View-Factor Algebra for Enclosures.....	12-15
12.3.3	Crossed-String Method.....	12-17
12.4	Radiation Heat Transfer within Enclosure of Black Surfaces.....	12-20
12.5	Radiation Heat Transfer within an Enclosure of Diffuse-Gray Surfaces.....	12-24
12.5.1	Surface Heating and Surface Temperature.....	12-26
12.5.2	Radiosity and Surface Temperature.....	12-30
12.5.3	Electrical Analogy.....	12-31
12.6	Summary.....	12-36
12.7	Problems.....	12-37
12.7.1	View Factor and Heat Transfer Radiation.....	12-37
12.7.2	Radiation in Enclosure of Black Surfaces.....	12-41
12.7.3	Radiation in Enclosure of Diffuse-Gray Surfaces.....	12-42
12.8	Project Problems.....	12-45
	Bibliography and Selected References	B-1

Appendixes	A-1
A.1 Prefixes	A-1
A.2 Conversion Factors Listed by Physical Quantity	A-1
A.3 Temperature Conversions.....	A-3
A.4 Hyperbolic Functions.....	A-3
A.5 Error Function or Probability Integral	A-6
A.6 Symbols and Units	A-8
B.1 Thermal Properties of Selected Metallic Elements at 293 K (20°C) or 528°R (65°F).....	A-9
B.2 Thermal Properties of Selected Alloys at 293 K (20°C) or 528°R (65°F).....	A-10
B.3 Thermal Properties of Selected Building Materials and Insulations at 293 K (20°C) or 528°R (65°F).....	A-11
C.1 Properties of Saturated Liquids: Ammonia NH ₃	A-13
C.2 Properties of Saturated Liquids: Carbon Dioxide CO ₂	A-14
C.3 Properties of Saturated Liquids: Dichlorodifluoromethane (Freon-12) CCl ₂ F ₂	A-15
C.4 Properties of Saturated Liquids: Engine Oil (Unused)	A-16
C.5 Properties of Saturated Liquids: Ethylene Glycol C ₂ H ₄ (OH) ₂	A-16
C.6 Properties of Saturated Liquids: Eutectic Calcium Chloride Solution (29.9% CaCl ₂)	A-17
C.7 Properties of Saturated Liquids: Glycerin C ₃ H ₅ (OH) ₃	A-17
C.8 Properties of Saturated Liquids: Mercury Hg	A-18
C.9 Properties of Saturated Liquids: Methyl Chloride CH ₃ Cl	A-18
C.10 Properties of Saturated Liquids: Sulfur dioxide SO ₂	A-19
C.11 Properties of Saturated Liquids: Water H ₂ O	A-20
D.1 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Air [Gas constant = 286.8 J/(kg · K) = 53.3 ft · lbf/lbm · °R; γ = c _p /c _v = 1.4].....	A-21
D.2 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Carbon Dioxide [Gas constant = 188.9 J/(kg · K) = 35.11 ft·lbf/lbm · °R; γ = c _p /c _v = 1.30]	A-22
D.3 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Helium [Gas constant = 2 077 J/(kg · K) = 386 ft · lbf/lbm · °R; γ = c _p /c _v = 1.66].....	A-22
D.4 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Hydrogen [Gas constant = 4 126 J/(kg · K) = 767 ft · lbf/lbm · °R; γ = c _p /c _v = 1.405]	A-23
D.5 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Nitrogen [Gas constant = 296.8 J/(kg · K) = 55.16 ft · lbf/lbm · °R; γ = c _p /c _v = 1.40].....	A-24
D.6 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Oxygen [Gas constant = 260 J/(kg · K) = 48.3 ft · lbf/lbm · °R; γ = c _p /c _v = 1.40]	A-24
D.7 Properties of Gases at Atmospheric Pressure (101.3 kPa = 14.7 psia): Water Vapor or Steam [Gas constant = 461.5 J/(kg · K) = 85.78 ft · lbf/lbm · °R; γ = c _p /c _v = 1.33].....	A-25
E.1 Normal Emissivity of Various Metals.....	A-26
E.2 Normal or Total (Hemispherical) Emissivity of Various Nonmetallic Solids.....	A-26
F.1 Dimensions of Wrought-Steel and Wrought-Iron Pipe.....	A-27
F.2 Dimensions of Seamless Copper Tubing.....	A-29
G.1 The Greek Alphabet.....	A-30
Answers to Selected Odd-Numbered Problems	A-31
Index	I-1
