Contents

1 Getting Started: Introductory Concepts and Definitions 1

1.1 Using Thermodynamics 2
1.2 Defining Systems 2
1.3 Describing Systems and Their Behavior 5
1.4 Measuring Mass, Length, Time, and Force 8
1.5 Specific Volume 10
1.6 Pressure 11
1.7 Temperature 15
1.8 Engineering Design and Analysis 19
1.9 Methodology for Solving Thermodynamics Problems 21
Chapter Summary and Study Guide 23

2 Energy and the First Law of Thermodynamics 31

2.1 Reviewing Mechanical Concepts of Energy 32
2.2 Broadening Our Understanding of Work 36
2.3 Broadening Our Understanding of Energy 47
2.4 Energy Transfer by Heat 48
2.5 Energy Accounting: Energy Balance for Closed Systems 52
2.6 Energy Analysis of Cycles 64
Chapter Summary and Study Guide 68

3 Evaluating Properties 80

3.1 Getting Started 81
Evaluating Properties: General Considerations 82
3.2 p–v–T Relation 82
3.3 Studying Phase Change 86
3.4 Retrieving Thermodynamic Properties 88
3.5 Evaluating Pressure, Specific Volume, and Temperature 89
3.6 Evaluating Specific Internal Energy and Enthalpy 95
3.7 Evaluating Properties Using Computer Software 98
3.8 Applying the Energy Balance Using Property Tables and Software 100
3.9 Introducing Specific Heats c_v and c_p 105
3.10 Evaluating Properties of Liquids and Solids 105
3.11 Generalized Compressibility Chart 109
Evaluating Properties Using the Ideal Gas Model 115
3.12 Introducing the Ideal Gas Model 115
3.13 Internal Energy, Enthalpy, and Specific Heats of Ideal Gases 118
3.14 Applying the Energy Balance Using Ideal Gas Tables, Constant Specific Heats, and Software 122
3.15 Polytropic Process Relations 129
Chapter Summary and Study Guide 131

4 Control Volume Analysis Using Energy 146

4.1 Conservation of Mass for a Control Volume 147
4.2 Forms of the Mass Rate Balance 149
4.3 Applications of the Mass Rate Balance 151
4.4 Conservation of Energy for a Control Volume 155
4.5 Analyzing Control Volumes at Steady State 158
4.6 Nozzles and Diffusers 161
4.7 Turbines 164
4.8 Compressors and Pumps 167
4.9 Heat Exchangers 171
4.10 Throttling Devices 176
4.11 System Integration 179
4.12 Transient Analysis 182
Chapter Summary and Study Guide 192

5 The Second Law of Thermodynamics 212

5.1 Introducing the Second Law 213
5.2 Statements of the Second Law 216
5.3 Identifying Irreversibilities 219
5.4 Interpreting the Kelvin–Planck Statement 224
5.5 Applying the Second Law to Thermodynamic Cycles 225
5.6 Second Law Aspects of Power Cycles Interacting with Two Reservoirs 225
5.7 Second Law Aspects of Refrigeration and Heat Pump Cycles Interacting with Two Reservoirs 228
5.8 The Kelvin and International Temperature Scales 230
5.9 Maximum Performance Measures for Cycles Operating Between Two Reservoirs 234
5.10 Carnot Cycle 239
5.11 Clausius Inequality 241
Chapter Summary and Study Guide 243

6 Using Entropy 255

6.1 Entropy–A System Property 256
6.2 Retrieving Entropy Data 257
6.3 Introducing the $T\,dS$ Equations 260
6.4 Entropy Change of an Incompressible Substance 262
6.5 Entropy Change of an Ideal Gas 263
6.6 Entropy Change in Internally Reversible Processes of Closed Systems 266
6.7 Entropy Balance for Closed Systems 269
6.8 Directionality of Processes 277
6.9 Entropy Rate Balance for Control Volumes 282
6.10 Rate Balances for Control Volumes at Steady State 283
6.11 Isentropic Processes 291
6.12 Isentropic Efficiencies of Turbines, Nozzles, Compressors, and Pumps 297
6.13 Heat Transfer and Work in Internally Reversible, Steady-State Flow Processes 305
Chapter Summary and Study Guide 309

7 Exergy Analysis 329

7.1 Introducing Exergy 330
7.2 Conceptualizing Exergy 331
7.3 Exergy of a System 332
7.4 Closed System Exergy Balance 338
7.5 Exergy Rate Balance for Control Volumes at Steady State 347
7.6 Exergetic (Second Law) Efficiency 359
7.7 Thermoeconomics 365
Chapter Summary and Study Guide 372

8 Vapor Power Systems 390

8.1 Modeling Vapor Power Systems 391
8.2 Analyzing Vapor Power Systems—Rankine Cycle 392
8.3 Improving Performance—Superheat and Reheat 405
8.4 Improving Performance—Regenerative Vapor Power Cycle 411
8.5 Other Vapor Cycle Aspects 422
8.6 Case Study: Exergy Accounting of a Vapor Power Plant 424
Chapter Summary and Study Guide 432

9 Gas Power Systems 444

Internal Combustion Engines 445
9.1 Introducing Engine Terminology 445
9.2 Air-Standard Otto Cycle 448
9.3 Air-Standard Diesel Cycle 453
9.4 Air-Standard Dual Cycle 457
Gas Turbine Power Plants 461
9.5 Modeling Gas Turbine Power Plants 461
9.6 Air-Standard Brayton Cycle 462
9.7 Regenerative Gas Turbines 472
9.8 Regenerative Gas Turbines with Reheat and Intercooling 476
9.9 Gas Turbines for Aircraft Propulsion 486
9.10 Combined Gas Turbine–Vapor Power Cycle 491
9.11 Ericsson and Stirling Cycles 497
Compressible Flow Through Nozzles and Diffusers 498
9.12 Compressible Flow Preliminaries 499
9.13 Analyzing One-Dimensional Steady Flow in Nozzles and Diffusers 503
9.14 Flow in Nozzles and Diffusers of Ideal Gases with Constant Specific Heats 510
Chapter Summary and Study Guide 518

10 Refrigeration and Heat Pump Systems 534

10.1 Vapor Refrigeration Systems 535
10.2 Analyzing Vapor-Compression Refrigeration Systems 537
10.3 Refrigerant Properties 545
10.4 Cascade and Multistage Vapor-Compression Systems 546
10.5 Absorption Refrigeration 548
10.6 Heat Pump Systems 550
10.7 Gas Refrigeration Systems 552
Chapter Summary and Study Guide 558

11 Thermodynamic Relations 568

11.1 Using Equations of State 569
11.2 Important Mathematical Relations 575
11.3 Developing Property Relations 579
11.4 Evaluating Changes in Entropy, Internal Energy, and Enthalpy 585
11.5 Other Thermodynamic Relations 594
11.6 Constructing Tables of Thermodynamic Properties 601

11.7 Generalized Charts for Enthalpy and Entropy **605**
11.8 p–v–T Relations for Gas Mixtures **612**
11.9 Analyzing Multicomponent Systems **618**
Chapter Summary and Study Guide **629**

12 Ideal Gas Mixture and Psychrometric Applications **642**

Ideal Gas Mixtures: General Considerations **643**
12.1 Describing Mixture Composition **643**
12.2 Relating p, V, and T for Ideal Gas Mixtures **647**
12.3 Evaluating U, H, S, and Specific Heats **648**
12.4 Analyzing Systems Involving Mixtures **650**
Psychrometric Applications **664**
12.5 Introducing Psychrometric Principles **664**
12.6 Psychrometers: Measuring the Wet-Bulb and Dry-Bulb Temperatures **675**
12.7 Psychrometric Charts **676**
12.8 Analyzing Air-Conditioning Processes **678**
12.9 Cooling Towers **694**
Chapter Summary and Study Guide **697**

13 Reacting Mixtures and Combustion **710**

Combustion Fundamentals **711**
13.1 Introducing Combustion **711**
13.2 Conservation of Energy—Reacting Systems **720**
13.3 Determining the Adiabatic Flame Temperature **732**
13.4 Fuel Cells **736**
13.5 Absolute Entropy and the Third Law of Thermodynamics **738**
Chemical Exergy **746**
13.6 Introducing Chemical Exergy **747**
13.7 Standard Chemical Exergy **750**
13.8 Exergy Summary **755**
13.9 Exergetic (Second Law) Efficiencies of Reacting Systems **758**
Chapter Summary and Study Guide **762**

14 Chemical and Phase Equilibrium **774**

Equilibrium Fundamentals **775**
14.1 Introducing Equilibrium Criteria **775**
Chemical Equilibrium **779**
14.2 Equation of Reaction Equilibrium **780**
14.3 Calculating Equilibrium Compositions **782**
14.4 Further Examples of the Use of the Equilibrium Constant **791**
Phase Equilibrium **801**
14.5 Equilibrium Between Two Phases of a Pure Substance **801**
14.6 Equilibrium of Multicomponent, Multiphase Systems **802**
Chapter Summary and Study Guide **807**

Appendix Tables, Figures, and Charts **815**

Index to Tables in SI Units **815**
Index to Tables in English Units **863**
Index to Figures and Charts **911**

Index 922
