

CONTENTS

Preface	xv
List of Symbols	xix
CHAPTER 1 <i>INTRODUCTION</i>	1
1.1 Introduction	1
1.2 Types of Air Dispersion Models	4
1.2.1 Gaussian Plume Models	4
1.2.2 Gaussian Puff Models	5
1.2.3 Stochastic Lagrangian Particle Models	5
1.2.4 Eulerian Advection and Dispersion Models	5
1.2.5 Computational Fluid Dynamics	6
1.3 Standard Conditions for Temperature and Pressure	6
1.4 Concentration Units in the Gas Phase	7
1.5 Units	9
1.6 Constants and Approximately Constant Variables	11
1.7 Frequently Used Greek Symbols	12
Problems	12
References	12
CHAPTER 2 <i>AN AIR DISPERSION MODELING PRIMER</i>	14
2.1 Introduction	14
2.2 Basic Concepts of Air Dispersion	15
2.3 Gaussian Dispersion Model	17
2.3.1 Assumptions Underlying the Gaussian Plume Concept	17
2.3.2 Quantitative Description	18
2.3.3 Refinements	26
2.4 Plume Rise	30
2.4.1 Plume Rise Correlations	30
2.4.2 Critical Wind Speed	32
2.4.3 Rules of Thumb	33
2.5 Need for Refinements to the Basic Gaussian Plume Dispersion Model	34
Problems	34
Materials Online	36
References	36
CHAPTER 3 <i>AIR POLLUTANTS: AN OVERVIEW</i>	37
3.1 Introduction	37
3.2 Types of Air Pollution	37
3.2.1 Sulfur Compounds	38
3.2.2 Nitrogen Compounds	39
3.2.3 Volatile Organic Compounds	40
3.2.4 Inorganic Carbon	41
3.2.5 Ozone	42

3.2.6	Particulate Matter	44
3.2.7	Metals	45
3.2.8	Air Pollution and Health	45
3.2.9	Global Warming	46
3.2.10	Air Pollution and Visibility	49
3.2.11	Odor Nuisance	50
	Problems	51
	References	52
CHAPTER 4	REGULATION OF AIR QUALITY AND AIR QUALITY MODELING	54
4.1	Introduction	54
4.2	Air Quality Regulation	54
4.3	Air Dispersion Modeling Guidelines	59
	References	59
CHAPTER 5	METEOROLOGY FOR AIR DISPERSION MODELERS	60
5.1	Introduction	60
5.2	Structure of the Atmosphere	61
5.3	Altitude Dependence of Barometric Pressure	62
5.4	Height Dependence of Temperature—Adiabatic Case	65
5.4.1	Adiabatic Lapse Rate	65
5.4.2	Potential Temperature	68
5.5	Stability	70
5.5.1	General Description of Stability	70
5.5.2	Stability Parameter	72
5.5.3	Diurnal Cycle of Stability	75
5.6	Heat Balance	76
5.7	Wind Speed Profile	81
5.7.1	Case 1: Smooth Surface, Adiabatic Conditions	81
5.7.2	Case 2: Rough Surface, Adiabatic Conditions	83
5.7.3	Case 3: Rough Surface, Nonneutral Conditions	86
5.8	Temperature Profile Revisited: Nonneutral Conditions	93
5.9	Heat Balance Revisited: Stable Conditions	97
5.10	Mixing Layer Height	99
5.11	Concept of Turbulence	103
5.11.1	Basic Properties of Turbulence	103
5.11.2	Measures of Turbulence	105
5.11.3	Similarity Theory and Turbulence	107
5.11.4	Covariance and Turbulence	110
5.11.5	Introduction to Eddy Diffusivity and Gradient Transport Theory	113
5.12	Special Topics in Meteorology	119
5.12.1	Convective Cycles: Qualitative Description	119
5.12.2	Internal Boundary Layer: Qualitative Description	120
5.12.3	Plume Shapes	121
5.12.4	Virtual Temperature	122
5.13	Advanced Topics in Meteorology	122
5.13.1	Convective Cycles: Quantitative Description	123
5.13.2	Simple Convective Boundary Layer Model	126
5.13.3	Internal Boundary Layer: Quantitative Description	129
5.13.4	Effect of Complex Terrain in Meteorology	130

5.14	Summary of Main Equations	134
	Problems	137
	Materials Online	138
	References	139
CHAPTER 6 GAUSSIAN DISPERSION MODELING: AN IN-DEPTH STUDY		141
6.1	Introduction	141
6.2	Gaussian Plume Models	142
6.3	Parameterizations Based on Stability Classes	145
6.4	Gaussian Plume Dispersion Short Cut	148
6.5	Plume Dispersion Modifiers	150
6.6	Continuous Parameterization for Gaussian Dispersion Models	153
6.6.1	Introduction: From Turbulence to Dispersion	153
6.6.2	Autocorrelation of Wind Speed	154
6.6.3	Taylor's Hypothesis	155
6.6.4	Lagrangian Frame of Reference	156
6.6.5	Practical Schemes for Continuous Parameterizations	159
6.6.6	Dispersion Parameters Based on the Autocorrelation Function	164
6.6.7	More T_{iL} Relationships	168
6.7	Gaussian Plume Models for Nonpoint Sources	172
6.8	Virtual Source Concept	174
6.9	Special Issues	175
6.9.1	Probability Density Functions for Plumes in Convective Boundary Layers	175
6.9.2	Emission from a Ground-Level Source	176
6.10	Gaussian Puff Modeling	180
6.10.1	Introduction	180
6.10.2	Puff Models	181
6.10.3	Stochastic Puff Models: Parameterization for Instantaneous Puffs	185
6.11	Advanced Topics in Meteorology	187
6.11.1	Spectral Properties of Turbulence	187
6.11.2	Turbulent Energy Dissipation: Kolmogorov Theory	188
6.12	Summary of the Main Equations	193
	Problems	195
	Materials Online	197
	References	197
CHAPTER 7 PLUME-ATMOSPHERE INTERACTIONS		201
7.1	Introduction	201
7.2	Plume Rise	201
7.2.1	Introduction	201
7.2.2	Plume Rise Theory	202
7.2.3	Flare Plume Rise	208
7.2.4	Numerical Plume Rise Calculations	210
7.3	Plume Downwash: PRIME (Plume Rise Model Enhancements)	215
7.3.1	Introduction	215
7.3.2	Wake Size Calculations	216
7.3.3	Streamline Deflection Calculation	219
7.3.4	Plume-Wake Interaction Calculation	221
7.4	Behavior of Denser-than-Air Plumes	225

7.5	Deposition	234
7.5.1	Dry Deposition	234
7.5.2	Wet Deposition	265
7.5.3	Gaussian Dispersion Models with Deposition	277
7.6	Summary of the Main Equations	288
	Problems	291
	Materials Online	292
	References	292

CHAPTER 8 GAUSSIAN MODEL APPROACHES IN URBAN OR INDUSTRIAL TERRAIN

8.1	Introduction	296
8.2	Wind Flow around Obstacles	297
8.3	Surface Roughness and Displacement Height in Urban and Industrial Terrain	298
8.3.1	Introduction	298
8.3.2	Determination of z_0 and d	300
8.4	Wind Speed Profiles near the Surface: Deviations from Similarity Theory	303
8.4.1	Theoretical Background	303
8.4.2	Simple Approach	305
8.4.3	Exponential Wind Speed Profile	305
8.4.4	Junction Methods	307
8.4.5	Other Canopy Wind Speed Descriptions	309
8.5	Turbulence in Urban Terrain	314
8.6	Dispersion Calculations in Urban Terrain near the Surface	317
8.6.1	Introduction	317
8.6.2	Gaussian Model Formulation near the Surface	317
8.6.3	Near Surface Dispersion Parameter Calculation Schemes	318
8.7	An Example	320
8.8	Summary of the Main Equations	324
	Problems	326
	Materials Online	327
	References	327

CHAPTER 9 STOCHASTIC MODELING APPROACHES

9.1	Introduction	329
9.2	Fundamentals of Stochastic Air Dispersion Modeling	330
9.2.1	Introduction: Properties of the Langevin Equation	330
9.2.2	Modifying the Langevin Equation for Air Dispersion Modeling: Homogeneous Atmosphere	333
9.2.3	Langevin Equation in Heterogeneous Atmosphere	338
9.2.4	Turbulence Data for Stochastic Lagrangian Models	343
9.2.5	Stochastic Lagrangian Particle Modeling of the Convective Boundary Layer	346
9.3	Numerical Aspects of Stochastic Modeling	348
9.4	Stochastic Lagrangian Calculation Examples	353
9.5	Summary of the Main Equations	358
	Problems	359
	Materials Online	360
	References	360

CHAPTER 10	<i>COMPUTATIONAL FLUID DYNAMICS AND METEOROLOGICAL MODELING</i>	363
10.1	Introduction	363
10.2	CFD Model Formulation: Fundamentals	364
10.2.1	The Navier–Stokes Equation	364
10.2.2	The Material and Energy Balance	371
10.3	Reynolds-Averaged Navier–Stokes (RANS) Techniques	375
10.3.1	Averaging the Navier–Stokes Equations	375
10.3.2	Closing the Navier–Stokes Equations	379
10.3.3	Reynolds-Averaged Material and Energy Balances	392
10.4	Large Eddy Simulation (LES)	394
10.4.1	Introduction	394
10.4.2	Turbulence Modeling in LES	394
10.5	Numerical Methods in CFD	397
10.6	Meteorological Modeling	399
10.7	Summary of the Main Equations	400
	References	402
CHAPTER 11	<i>EULERIAN MODEL APPROACHES</i>	404
11.1	Introduction	404
11.2	Governing Equations of Eulerian Dispersion Models	405
11.3	Closing the Material Balance for Turbulent Motion	412
11.3.1	Local Closure	412
11.3.2	Nonlocal Closure	415
11.4	Atmospheric Chemistry	422
11.4.1	Introduction	422
11.4.2	Introduction to Chemical Kinetics	423
11.4.3	Introduction to Photochemical Kinetics	428
11.4.4	Gas-Phase Reactions in Tropospheric Chemistry	431
11.4.5	Chemistry of Aerosol Formation in the Troposphere	440
11.5	Numerical Aspects of Eulerian Dispersion Modeling	455
11.5.1	Advection	456
11.5.2	Diffusion/Dispersion	461
11.5.3	Chemical Reaction Kinetics	463
11.5.4	Boundary Conditions	466
11.5.5	Plume-in-Grid Modeling	467
11.6	Summary of the Main Equations	467
	Problems	469
	References	470
CHAPTER 12	<i>PRACTICAL ASPECTS OF AIR DISPERSION MODELING</i>	474
12.1	Introduction	474
12.2	Source Characterization and Source Modeling	474
12.3	Coordinate Systems	476
12.4	Data Handling	478
12.5	Model Validation	478
	References	479

CHAPTER 13	<i>ISC3 AND SCREEN3: A DETAILED DESCRIPTION</i>	480
13.1	Introduction	480
13.2	ISC3 Model Description	480
13.3	SCREEN3 Model Description	489
	References	490
CHAPTER 14	<i>AERMOD AND AERMET: A DETAILED DESCRIPTION</i>	491
14.1	Introduction	491
14.2	Description of AERMET	492
14.3	Description of AERMOD	496
14.3.1	Wind Speed Profile	496
14.3.2	Potential Temperature Profile	497
14.3.3	Profile of Vertical Turbulence	498
14.3.4	Profile of Horizontal Turbulence	499
14.3.5	Calculation of Effective Variables	500
14.3.6	Complex Terrain in AERMOD	502
14.3.7	Concentration Predictions in AERMOD	503
14.3.8	Dispersion Parameters in AERMOD	508
14.3.9	Plume Rise Calculations in AERMOD	511
	References	512
CHAPTER 15	<i>CALPUFF AND CALMET: A DETAILED DESCRIPTION</i>	514
15.1	Introduction	514
15.2	Description of CALMET	515
15.2.1	Coordinate System	515
15.2.2	Introduction to Wind Field Calculations in CALMET	515
15.2.3	Initial Guess Wind Field Generation in CALMET	516
15.2.4	Step 1: Wind Field Formulation in CALMET	517
15.2.5	Step 2: Wind Field Formulation in CALMET	520
15.2.6	Determination of Stability in CALMET	523
15.2.7	Precipitation Interpolation	526
15.3	Description of CALPUFF	526
15.3.1	Concentration Calculations in CALPUFF	526
15.3.2	Dispersion Parameter Calculations in CALPUFF	528
15.3.3	Plume Rise Calculations in CALPUFF	532
15.3.4	Impact of Downwash on Plume Rise and Dispersion Calculations in CALPUFF	534
15.3.5	Area Source Plume Rise Calculations in CALPUFF	537
15.3.6	Coastal Dispersion Calculations in CALPUFF	537
15.3.7	Complex Terrain Calculations in CALPUFF: Introduction	537
15.3.8	Complex Terrain Algorithm for Subgrid Scale Features (CTSG)	538
15.3.9	Simple Adjustments for Complex Terrain	540
	References	541
CHAPTER 16	<i>CMAQ: A BRIEF DESCRIPTION</i>	542
16.1	Introduction	542
16.2	Main Features of CMAQ	542
16.3	Advection and Diffusion Modeling in CMAQ	544
16.4	Atmospheric Chemistry Modeling in CMAQ	545

16.4.1	Photolysis Rates	545
16.4.2	Chemical Mechanisms in CMAQ	546
16.4.3	Numerical Aspects of Chemistry in CMAQ	554
	References	554
APPENDIX A	<i>AUXILIARY CALCULATIONS AND DERIVATIONS</i>	556
APPENDIX B	<i>AUXILIARY DATA AND METHODS</i>	596
APPENDIX C	<i>THEORY OF NEAR SURFACE TURBULENCE APPLIED TO WIND SPEED PROFILES, DRY DEPOSITION, AIR–WATER EXCHANGE, AND CANOPY EFFECTS</i>	607
	Index	629
