Part I. Phenomenology of turbulent flow

1. Direct and large-eddy simulation: context and introduction	3
1.1 Introduction	3
1.2 Navier-Stokes equations for (in)compressible flow	8
1.3 Complexity reduction: options and limitations	18
1.4 Filtering the Navier-Stokes equations	27
1.5 An overview of DNS and LES capabilities	36
2. Computational dynamical systems for turbulence	43
2.1 Introduction	43
2.2 Physical space realizations of turbulent flow	46
2.3 Spectral view of turbulence	54
2.4 Dynamical systems interpretation of large-eddy modeling	60
2.5 Canonical flows as testing ground	65
2.5.1 Homogeneous isotropic turbulence	66
2.5.2 Turbulence in mixing layers	69
2.5.3 Wall-bounded turbulent flow	71

Part II. Numerical aspects of DNS and LES

3. Features of a basic numerical approach	75
3.1 Introduction	75
3.2 Basic approaches to discretization	77
3.3 Accuracy and stability of numerical methods	83
3.4 Templates for compressible and incompressible flow solvers	91

4. Time-integration	97
4.1 Introduction	97
4.2 Explicit time-integration	100
4.3 Implicit time-integration	107
4.4 Solving linear systems	111
4.5 Determination of an accuracy time-step	116
5. Spatial discretization	123
5.1 Introduction	123
5.2 Finite difference methods and numerical quadrature	125
5.3 Finite volume methods	141
5.4 Implicit compact differencing methods	151
5.5 Spectral methods	156
5.6 Boundary conditions	165
5.7 Validation using stability theory	175

Part III. Subgrid modeling

6. Filtering and rigorous subgrid modeling	185
6.1 Introduction	185
6.2 Basic and high-order filters in large-eddy simulation	187
6.3 Realizability conditions for the turbulent stresses	197
6.4 Approximate inverse modeling	200
6.5 Algebraic properties of turbulent stresses	209
6.6 Estimates for the commutator-errors	211
6.7 Regularization principles	217
7. Subgrid models	221
7.1 Introduction	221
7.2 Basic modeling of the turbulent stress tensor	223
7.3 Dynamic and inverse modeling of turbulent stresses	239
7.4 Wall modeling	245
7.5 Compressibility effects on subgrid scale	250
7.6 Commutator-error modeling	254

Part IV. Validation and error-assessment

8. Validation of large-eddy simulation	263
8.1 Introduction	263
8.2 A priori testing	265
8.3 A posteriori testing	269
8.4 Validation of large-eddy simulation of a mixing layer	273
8.5 Validation of boundary layer flow	282
9. Interacting error dynamics	287
9.1 Introduction	287
9.2 A priori estimates of discretization error effects	291
9.3 Grid-dependence of large-eddy predictions	293
9.4 Interactions between errors and LES paradoxes	300
9.5 Predicting accuracy limitations in LES	304
10. Epilogue	309
References	315
