Chapter 1 Introduction to Green’s Functions 1

1.1 Introduction..... 1

1.1.1 Advantage of the Green’s Function Method2

1.1.2 Scope of This Chapter3

1.2 Heat Flux and Temperature.....3

1.3 Differential Energy Equation4

1.4 Boundary and Initial Conditions.....7

1.5 Integral Energy Equation8

1.6 Dirac Delta Function..... 11

1.7 Steady Heat Conduction in One Dimension..... 13

1.7.1 Solution by Integration 13

1.7.2 Solution by Green’s Function 14

1.8 GF in the Infinite One-Dimensional Body..... 18

1.8.1 Auxiliary Problem for G 19

1.8.2 Laplace Transform, Brief Facts..... 19

1.8.3 Derivation of the GF20

1.9 Temperature in an Infinite One-Dimensional Body.....22

1.9.1 Green’s Function Solution Equation22

1.9.2 Fundamental Heat Conduction Solution22

1.10 Two Interpretations of Green’s Functions28

1.11 Temperature in Semi-Infinite Bodies29

1.11.1 Boundary Condition of the First Kind30

1.11.2 Boundary Condition of the Second Kind.....32

1.12 Flat Plates.....35

1.12.1 Temperature for Flat Plates35

1.12.2 Auxiliary Problem for Flat Plates36

1.13 Properties Common to Transient Green’s Functions37

1.14 Heterogeneous Bodies37

1.15 Anisotropic Bodies.....38

1.16 Transformations38

1.16.1 Orthotropic Bodies39

1.16.2 Moving Solids.....39

1.16.3 Fin Term.....40

1.17 Non-Fourier Heat Conduction	41
Problems	43
References	46
Chapter 2 Numbering System in Heat Conduction.....	47
2.1 Introduction.....	47
2.2 Geometry and Boundary Condition Numbering System	48
2.3 Boundary Condition Modifiers	52
2.4 Initial Temperature Distribution	53
2.5 Interface Descriptors.....	54
2.6 Numbering System for $g(x, t)$	55
2.7 Examples of Numbering System	57
2.8 Advantages of Numbering System	58
2.8.1 Data Base in Transient Heat Conduction	58
2.8.2 Algebra for Linear Cases	59
Problems	61
References	62
Chapter 3 Derivation of the Green's Function Solution Equation	63
3.1 Introduction.....	63
3.2 Derivation of the One-Dimensional Green's Function Solution Equation	63
3.3 General Form of the Green's Function Solution Equation	70
3.3.1 Temperature Problem	70
3.3.2 Derivation of the Green's Function Solution Equation	72
3.4 Alternative Green's Function Solution Equation	79
3.5 Fin Term m^2T	82
3.5.1 Transient Fin Problems	83
3.5.2 Steady Fin Problems in One Dimension	86
3.6 Steady Heat Conduction	86
3.6.1 Relationship between Steady and Transient Green's Functions	87
3.6.2 Steady Green's Function Solution Equation	87
3.7 Moving Solids.....	89
3.7.1 Introduction.....	89
3.7.2 Three-Dimensional Formulation	91
Problems	95
References	99
Chapter 4 Methods for Obtaining Green's Functions	101
4.1 Introduction.....	101
4.2 Method of Images	101

- 4.3 Laplace Transform Method..... 105
 - 4.3.1 Definition 106
 - 4.3.2 Temperature Example 106
 - 4.3.3 Derivation of Green’s Functions..... 108
- 4.4 Method of Separation of Variables 115
 - 4.4.1 Plate with Temperature Fixed at Both Sides (X11).... 115
- 4.5 Product Solution for Transient GF..... 123
 - 4.5.1 Rectangular Coordinates..... 123
 - 4.5.2 Cylindrical Coordinates 128
- 4.6 Method of Eigenfunction Expansions 128
- 4.7 Steady Green’s Functions 134
 - 4.7.1 Integration of the Auxiliary Equation: The Source Solutions 135
 - 4.7.2 Pseudo-Green’s Function for Insulated Boundaries... 139
 - 4.7.3 Limit Method 141
- Problems 144
- References..... 147

Chapter 5 Improvement of Convergence and Intrinsic Verification 149

- 5.1 Introduction..... 149
 - 5.1.1 Problems Considered in This Chapter 149
 - 5.1.2 Two Basic Functions..... 150
 - 5.1.3 Convergence of the GF..... 151
- 5.2 Identifying Convergence Problems 153
 - 5.2.1 Convergence Criterion 153
 - 5.2.2 Monitor the Number of Terms 155
 - 5.2.3 Slower Convergence of the Derivative 156
- 5.3 Strategies to Improve Series Convergence 158
 - 5.3.1 Replacement of Steady-State Series 158
 - 5.3.2 Alternate GF Solution Equation..... 164
 - 5.3.3 Time Partitioning 167
- 5.4 Intrinsic Verification 169
 - 5.4.1 Intrinsic Verification by Complementary Transients 170
 - 5.4.2 Complementary Transient and 1D Solution..... 172
 - 5.4.3 Intrinsic Verification by Alternate Series Expansion..... 172
 - 5.4.4 Time-Partitioning Intrinsic Verification 175
- Problems 178
- References..... 180

Chapter 6 Rectangular Coordinates 181

- 6.1 Introduction..... 181
- 6.2 One-Dimensional Green’s Functions Solution Equation..... 181

6.3 Semi-Infinite One-Dimensional Bodies..... 182

6.3.1 Initial Conditions 183

6.3.2 Boundary Conditions 185

6.3.3 Volume Energy Generation..... 191

6.4 Flat Plates: Small-Cotime Green’s Functions..... 192

6.4.1 Initial Conditions 193

6.4.2 Volume Energy Generation..... 195

6.5 Flat Plates: Large-Cotime Green’s Functions..... 197

6.5.1 Initial Conditions 197

6.5.2 Plane Heat Source 199

6.5.3 Volume Energy Generation..... 202

6.6 Flat Plates: The Nonhomogeneous Boundary 203

6.7 Two-Dimensional Rectangular Bodies 211

6.8 Two-Dimensional Semi-Infinite Bodies 218

6.8.1 Integral Expression for the Temperature 218

6.8.2 Special Cases 219

6.8.3 Series Expression for the Temperature 219

6.8.4 Application to the Strip Heat Source..... 222

6.8.5 Discussion 224

6.9 Steady State..... 225

Problems 230

References..... 235

Chapter 7 Cylindrical Coordinates..... 237

7.1 Introduction..... 237

7.2 Relations for Radial Heat Flow 237

7.3 Infinite Body 238

7.3.1 The *R00* Green’s Function 238

7.3.2 Derivation of the *R00* Green’s Function 238

7.3.3 Approximations for the *R00* Green’s Function 240

7.3.4 Temperatures from Initial Conditions..... 240

7.4 Separation of Variables for Radial Heat Flow 242

7.5 Long Solid Cylinder 246

7.5.1 Initial Conditions 246

7.5.2 Boundary Conditions 248

7.5.3 Volume Energy Generation..... 251

7.6 Hollow Cylinder 254

7.7 Infinite Body with a Circular Hole 258

7.8 Thin Shells, $T = T(\phi, t)$ 260

7.9 Limiting Cases for 2D and 3D Geometries 263

7.9.1 Fourier Number..... 263

7.9.2 Aspect Ratio 264

7.9.3 Nonuniform Heating 264

7.10 Cylinders with $T = T(r, z, t)$ 265

7.11	Disk Heat Source on a Semi-Infinite Body.....	268
7.11.1	Integral Expression for the Temperature	269
7.11.2	Closed-Form Expressions for the Temperature	271
7.11.3	Series Expression for the Surface Temperature at Large Times.....	272
7.11.4	Average Temperature	274
7.12	Bodies with $T = T(r, \phi, t)$	275
7.13	Steady State.....	280
	Problems	285
	References.....	288
Chapter 8	Radial Heat Flow in Spherical Coordinates	291
8.1	Introduction.....	291
8.2	Green's Function Equation for Radial Spherical Heat Flow.....	292
8.3	Infinite Body	292
8.3.1	Derivation of the RS00 Green's Function.....	294
8.4	Separation of Variables for Radial Heat Flow in Spheres	297
8.5	Temperature in Solid Spheres	303
8.6	Temperature in Hollow Spheres	319
8.7	Temperature in an Infinite Region outside a Spherical Cavity.....	322
8.8	Steady State.....	326
	Problems	329
Chapter 9	Steady-Periodic Heat Conduction	333
9.1	Introduction.....	333
9.2	Steady-Periodic Relations.....	333
9.3	One-Dimensional GF.....	335
9.3.1	One-Dimensional GF in Cartesian Coordinates	335
9.3.2	One-Dimensional GF in Cylindrical Coordinates	336
9.3.3	One-Dimensional GF in Spherical Coordinates	338
9.4	One-Dimensional Temperature.....	340
9.5	Layered Bodies	345
9.6	Two- and Three-Dimensional Cartesian Bodies	349
9.6.1	Rectangles and Slabs.....	349
9.6.2	Infinite and Semi-Infinite Bodies	352
9.6.3	Rectangular Parallelepiped	353
9.7	Two-Dimensional Bodies in Cylindrical Coordinates	354
9.7.1	GF with Eigenfunctions along r	354
9.7.2	GF with Eigenfunctions along z	356
9.7.3	Axisymmetric Half-Space	359

9.8	Cylinder with $T = T(r, \phi, z, \omega)$	361
9.8.1	GF with Eigenfunctions along z	362
9.8.2	GF with Eigenfunctions along r	363
	Problems	366
	References.....	367

Chapter 10 Galerkin-Based Green's Functions and Solutions..... 369

10.1	Introduction.....	369
10.2	Green's Functions and Green's Function Solution Method....	370
10.2.1	Galerkin-Based Integral Method.....	371
10.2.2	Numerical Calculation of Eigenvalues	379
10.2.3	Nonhomogeneous Solution.....	380
10.2.4	Green's Functions Expression.....	383
10.2.5	Properties of Green's Functions.....	384
10.2.6	Green's Function Solution Equation.....	385
10.3	Alternative Form of the Green's Function Solution	387
10.4	Basis Functions and Simple Matrix Operations	392
10.4.1	One-Dimensional Bodies.....	392
10.4.2	Matrices A and B for One-Dimensional Problems.....	393
10.4.3	Matrix Operations When $N = 1$ and $N = 2$	396
10.5	Fins and Fin Effect.....	405
10.6	Conclusions.....	408
	Problems	409
	Note 1: Mathematical Identities.....	410
	Note 2: A Mathematica Program for Determination of Temperature in Example 10.2	410
	References.....	411

Chapter 11 Applications of the Galerkin-Based Green's Functions 413

11.1	Introduction.....	413
11.2	Basis Functions in Some Complex Geometries.....	413
11.2.1	Boundary Conditions of the First Kind.....	414
11.2.2	Boundary Conditions of the Second Kind	418
11.2.3	Boundary Conditions of the Third Kind	421
11.3	Heterogeneous Solids	423
11.4	Steady-State Conduction.....	429
11.5	Fluid Flow in Ducts	432
11.6	Conclusion	437
	Problems	438
	References.....	440

Chapter 12 Unsteady Surface Element Method..... 441

12.1 Introduction..... 441

12.2 Duhamel’s Theorem and Green’s Function Method..... 443

12.2.1 Derivation of Duhamel’s Theorem for Time- and Space-Variable Boundary Conditions..... 444

12.2.2 Relation to the Green’s Function Method..... 448

12.3 Unsteady Surface Element Formulations 451

12.3.1 Surface Element Discretization..... 452

12.3.2 Green’s Function Form of the USE Equations 454

12.3.3 Time Integration of the USE Equations..... 456

12.3.4 Flux-Based USE Equations for Bodies in Contact..... 457

12.3.5 Numerical Solution of the USE Equations for Bodies in Contact 459

12.3.6 Influence Functions..... 463

12.4 Approximate Analytical Solution (Single Element) 465

12.5 Examples..... 470

Problems 478

Note 1: Derivation of Equations 12.65a and 12.65b..... 479

References..... 480

Appendix B Bessel Functions 483

Appendix D Dirac Delta Function..... 491

Appendix E Error Function and Related Functions 497

Appendix F Functions and Series 503

Appendix I Integrals..... 505

Appendix L Laplace Transform Method..... 519

Appendix P Properties of Selected Materials 531

Appendix R Green’s Functions for Radial-Cylindrical Coordinates (r) 533

Appendix R Φ Green’s Functions for Cylindrical Coordinates (r, ϕ)..... 553

Appendix Φ Cylindrical Polar Coordinate, ϕ Thin Shell Case..... 563

Appendix RS Green’s Functions for Radial Spherical Geometries..... 565

Appendix X Green’s Functions: Rectangular Coordinates.....577

Index of Solutions by Number System.....613

Author Index.....617

Subject Index.....619
