Part I OVERVIEW

1 Introduction 3
1.1 Durability in Vehicle Engineering 4
1.2 Reliability, Variation and Robustness 6
1.3 Load Description for Trucks 7
1.4 Why Is Load Analysis Important? 9
1.5 The Structure of the Book 10

2 Loads for Durability 15
2.1 Fatigue and Load Analysis 15
2.1.1 Constant Amplitude Load 15
2.1.2 Block Load 16
2.1.3 Variable Amplitude Loading and Rainflow Cycles 16
2.1.4 Rainflow Matrix, Level Crossings and Load Spectrum 18
2.1.5 Other Kinds of Fatigue 20
2.2 Loads in View of Fatigue Design 23
2.2.1 Fatigue Life: Cumulative Damage 23
2.2.2 Fatigue Limit: Maximum Load 23
2.2.3 Sudden Failures: Maximum Load 24
2.2.4 Safety Critical Components 24
2.2.5 Design Concepts in Aerospace Applications 24

2.3 Loads in View of System Response 25
2.4 Loads in View of Variability 27
2.4.1 Different Types of Variability 27
2.4.2 Loads in Different Environments 28
2.5 Summary 29

Part II METHODS FOR LOAD ANALYSIS

3 Basics of Load Analysis 33
3.1 Amplitude-based Methods 35
3.1.1 From Outer Loads to Local Loads 36
3.1.2 Pre-processing of Load Signals 37
3.1.3 Rainflow Cycle Counting 40
3.1.4 Range-pair Counting 49
3.1.5 Markov Counting 51
3.1.6 Range Counting 53
3.1.7 Level Crossing Counting 55
3.1.8 Interval Crossing Counting 56
3.1.9 Irregularity Factor 56
3.1.10 Peak Value Counting 56
3.1.11 Examples Comparing Counting Methods 56
3.1.12 Pseudo Damage and Equivalent Loads 60
3.1.13 Methods for Rotating Components 67
3.1.14 Recommendations and Work-flow 70
3.2 Frequency-based Methods 72
3.2.1 The PSD Function and the Periodogram 73
3.2.2 Estimating the Spectrum Based on the Periodogram 74
3.2.3 Spectrogram or Waterfall Diagram 79
3.2.4 Frequency-based System Analysis 79
3.2.5 Extreme Response and Fatigue Damage Spectrum 85
3.2.6 Wavelet Analysis 86
3.2.7 Relation Between Amplitude and Frequency-based Methods 87
3.2.8 More Examples and Summary 87
3.3 Multi-input Loads 91
3.3.1 From Outer Loads to Local Loads 92
3.3.2 The RP Method 94
3.3.3 Plotting Pseudo Damage and Examples 95
3.3.4 Equivalent Multi-input Loads 99
3.3.5 Phase Plots and Correlation Matrices for Multi-input Loads 101
3.3.6 Multi-input Time at Level Counting 104
3.3.7 Biaxiality Plots 104
3.3.8 The Wang-Brown Multi-axial Cycle Counting Method 105
3.4 Summary 105

4	**Load Editing and Generation of Time Signals**	**107**
4.1	Introduction	107
	4.1.1 Essential Load Properties	108
	4.1.2 Criteria for Equivalence	108
4.2	Data Inspections and Corrections	110
	4.2.1 Examples and Inspection of Data	110
	4.2.2 Detection and Correction	112
4.3	Load Editing in the Time Domain	115
	4.3.1 Amplitude-based Editing of Time Signals	115
	4.3.2 Frequency-based Editing of Time Signals	126
	4.3.3 Amplitude-based Editing with Frequency Constraints	136
	4.3.4 Editing of Time Signals: Summary	138
4.4	Load Editing in the Rainflow Domain	139
	4.4.1 Re-scaling	139
	4.4.2 Superposition	141
	4.4.3 Extrapolation on Length or Test Duration	143
	4.4.4 Extrapolation to Extreme Usage	150
	4.4.5 Load Editing for 1D Counting Results	154
	4.4.6 Summary, Hints and Recommendations	154
4.5	Generation of Time Signals	156
	4.5.1 Amplitude- or Cycle-based Generation of Time Signals	156
	4.5.2 Frequency-based Generation of Time Signals	163
4.6	Summary	167
5	**Response of Mechanical Systems**	**169**
5.1	General Description of Mechanical Systems	169
	5.1.1 Multibody Models	170
	5.1.2 Finite Element Models	172
5.2	Multibody Simulation (MBS) for Durability Applications or: from System Loads to Component Loads	173
	5.2.1 An Illustrative Example	173
	5.2.2 Some General Modelling Aspects	175
	5.2.3 Flexible Bodies in Multibody Simulation	178
	5.2.4 Simulating the Suspension Model	181
5.3	Finite Element Models (FEM) for Durability Applications or: from Component Loads to Local Stress-strain Histories	186
	5.3.1 Linear Static Load Cases and Quasi-static Superposition	188
	5.3.2 Linear Dynamic Problems and Modal Superposition	189
	5.3.3 From the Displacement Solution to Local Stresses and Strains	192
	5.3.4 Summary of Local Stress-strain History Calculation	192
5.4	Invariant System Loads	193
	5.4.1 Digital Road and Tyre Models	194
	5.4.2 Back Calculation of Invariant Substitute Loads	196
	5.4.3 An Example	199
5.5	Summary	200

6	**Models for Random Loads**	**203**
6.1	Introduction	203
6.2	Basics on Random Processes	206
	*6.2.1 Some Average Properties of Random Processes**	207
6.3	Statistical Approach to Estimate Load Severity	209
	6.3.1 The Extrapolation Method	210
	6.3.2 Fitting Range-pairs Distribution	210
	6.3.3 Semi-parametric Approach	213
6.4	The Monte Carlo Method	215
6.5	Expected Damage for Gaussian Loads	218
	6.5.1 Stationary Gaussian Loads	219
	*6.5.2 Non-stationary Gaussian Loads with Constant Mean**	223
6.6	Non-Gaussian Loads: the Role of Upcrossing Intensity	224
	6.6.1 Bendat's Narrow Band Approximation	224
	*6.6.2 Generalization of Bendat's Approach**	225
	6.6.3 Laplace Processes	228
6.7	The Coefficient of Variation for Damage	230
	6.7.1 Splitting the Measured Signal into Parts	230
	6.7.2 Short Signals	231
	6.7.3 Gaussian Loads	232
	6.7.4 Compound Poisson Processes: Roads with Pot Holes	233
6.8	Markov Loads	235
	*6.8.1 Markov Chains**	240
	6.8.2 Discrete Markov Loads – Definition	242
	6.8.3 Markov Chains of Turning Points	243
	6.8.4 Switching Markov Chain Loads	244
	6.8.5 Approximation of Expected Damage for Gaussian Loads	247
	*6.8.6 Intensity of Interval Upcrossings for Markov Loads**	248
6.9	Summary	249
7	**Load Variation and Reliability**	**253**
7.1	Modelling of Variability in Loads	253
	7.1.1 The Sources of Load Variability: Statistical Populations	254
	7.1.2 Controlled or Uncontrolled Variation	255
	7.1.3 Model Errors	255
7.2	Reliability Assessment	256
	7.2.1 The Statistical Model Complexity	256
	7.2.2 The Physical Model Complexity	257
7.3	The Full Probabilistic Model	258
	7.3.1 Monte Carlo Simulations	259
	7.3.2 Accuracy of the Full Probabilistic Approach	263
7.4	The First-Moment Method	263
7.5	The Second-Moment Method	264
	7.5.1 The Gauss Approximation Formula	264
7.6	The Fatigue Load-Strength Model	265
	7.6.1 The Fatigue Load and Strength Variables	265

7.6.2 *Reliability Indices* 266
7.6.3 *The Equivalent Load and Strength Variables* 267
7.6.4 *Determining Uncertainty Measures* 271
7.6.5 *The Uncertainty due to the Estimated Damage Exponent* 273
7.6.6 *The Uncertainty Measure of Strength* 275
7.6.7 *The Uncertainty Measure of Load* 277
7.6.8 *Use of the Reliability Index* 279
7.6.9 *Including an Extra Safety Factor* 281
7.6.10 *Reducing Uncertainties* 283
7.7 Summary 284

Part III LOAD ANALYSIS IN VIEW OF THE VEHICLE DESIGN PROCESS

8 Evaluation of Customer Loads 287
8.1 Introduction 287
8.2 Survey Sampling 288
8.2.1 *Why Use Random Samples?* 288
8.2.2 *Simple Random Sample* 289
8.2.3 *Stratified Random Sample* 290
8.2.4 *Cluster Sample* 290
8.2.5 *Sampling with Unequal Probabilities* 291
8.2.6 *An Application* 292
8.2.7 *Simple Random Sampling in More Detail* 293
8.2.8 *Conclusion* 294
8.3 Load Measurement Uncertainty 295
8.3.1 *Precision in Load Severity* 295
8.3.2 *Pair-wise Analysis of Load Severity* 301
8.3.3 *Joint Analysis of Load Severity* 301
8.4 Random Sampling of Customers 303
8.4.1 *Customer Survey* 303
8.4.2 *Characterization of a Market* 304
8.4.3 *Simplified Model for a New Market* 306
8.4.4 *Comparison of Markets* 308
8.5 Customer Usage and Load Environment 308
8.5.1 *Model for Customer Usage* 310
8.5.2 *Load Environment Uncertainty* 312
8.6 Vehicle-Independent Load Descriptions 314
8.7 Discussion and Summary 318

9 Derivation of Design Loads 321
9.1 Introduction 321
9.1.1 *Scalar Load Representations* 321
9.1.2 *Other Load Representations* 322
9.1.3 *Statistical Aspects* 322

	9.1.4 Structure of the Chapter	323
9.2	From Customer Usage Profiles to Design Targets	324
	9.2.1 Customer Load Distribution and Design Load	324
	9.2.2 Strength Distribution and Strength Requirement	324
	9.2.3 Defining the Reliability Target	326
	9.2.4 Partial Safety Factor for Load-Strength Modelling	328
	9.2.5 Safety Factors for Design Loads	329
	9.2.6 Summary and Remarks	331
9.3	Synthetic Load Models	333
9.4	Random Load Descriptions	335
	9.4.1 Models for External Load Environment	335
	9.4.2 Load Descriptions in Design	336
	9.4.3 Load Description for Testing	336
9.5	Applying Reconstruction Methods	336
	9.5.1 Rainflow Reconstruction	336
	9.5.2 1D and Markov Reconstruction	339
	9.5.3 Spectral Reconstruction	339
	9.5.4 Multi-input Loads	340
9.6	Standardized Load Spectra	341
9.7	Proving Ground Loads	342
9.8	Optimized Combination of Test Track Events	342
	9.8.1 Optimizing with Respect to Damage per Channel	343
	9.8.2 An Instructive Example	346
	*9.8.3 Extensions**	351
	9.8.4 Hints and Practical Aspects	353
9.9	Discussion and Summary	354
10	**Verification of Systems and Components**	**357**
10.1	Introduction	357
	10.1.1 Principles of Verification	357
	10.1.2 Test for Continuous Improvements vs. Tests for Release	358
	10.1.3 Specific Problems in Verification of Durability	359
	10.1.4 Characterizing or Verification Tests	360
	10.1.5 Verification on Different Levels	361
	10.1.6 Physical vs. Numerical Evaluation	363
	10.1.7 Summary	363
10.2	Generating Loads for Testing	363
	10.2.1 Reliability Targets and Verification Loads	364
	10.2.2 Generation of Time Signals based on Load Specifications	364
	10.2.3 Acceleration of Tests	365
10.3	Planning and Evaluation of Tests	365
	10.3.1 Choice of Strength Distribution and Variance	366
	10.3.2 Parameter Estimation and Censored Data	368
	10.3.3 Verification of Safety Factors	371
	10.3.4 Statistical Tests for Quantiles	373
10.4	Discussion and Summary	379

A Fatigue Models and Life Prediction **383**
A.1 Short, Long or Infinite Life 383
A.1.1 Low Cycle Fatigue 383
A.1.2 High Cycle Fatigue 383
A.1.3 Fatigue Limit 384
A.2 Cumulative Fatigue 384
A.2.1 Arguments for the Palmgren-Miner Rule 384
A.2.2 When is the Palmgren-Miner Rule Useful? 386

B Statistics and Probability **387**
B.1 Further Reading 387
B.2 Some Common Distributions 387
B.2.1 Normal Distribution 387
B.2.2 Log-Normal Distribution 388
B.2.3 Weibull Distribution 388
B.2.4 Rayleigh Distribution 388
B.2.5 Exponential Distribution 388
B.2.6 Generalized Pareto Distribution 388
B.3 Extreme Value Distributions 389
B.3.1 Peak over Threshold Analysis 389

C Fourier Analysis **391**
C.1 Fourier Transformation 391
C.2 Fourier Series 392
C.3 Sampling and the Nyquist-Shannon Theorem 393
C.4 DFT/FFT (Discrete Fourier Transformation) 394

D Finite Element Analysis **395**
D.1 Kinematics of Flexible Bodies 395
D.2 Equations of Equilibrium 396
D.3 Linear Elastic Material Behaviour 397
D.4 Some Basics on Discretization Methods 397
D.5 Dynamic Equations 399

E Multibody System Simulation **401**
E.1 Linear Models 401
E.2 Mathematical Description of Multibody Systems 402
E.2.1 The Equations of Motion 403
E.2.2 Computational Issues 404

F Software for Load Analysis **407**
F.1 Some Dedicated Software Packages 407
F.2 Some Software Packages for Fatigue Analysis 408
F.3 WAFO – a Toolbox for Matlab 408

Bibliography **411**

Index **423**
