Preface..... xi

Acknowledgments..... xv

Chapter 1 Introduction 1

1.1 Railroad Vehicles and Multibody System Dynamics..... 2

1.1.1 Generality 2

1.1.2 Nonlinearity..... 4

1.1.3 Implementation of Railroad Vehicle Elements..... 6

1.2 Constrained Dynamics 9

1.3 Geometry Problem 11

1.3.1 Differential Geometry 12

1.3.2 Rail and Wheel Geometry 14

1.4 Contact Theories 17

1.4.1 Creep Forces 17

1.4.2 Wheel/Rail Creep Theories..... 18

1.5 General Multibody Railroad Vehicle Formulations..... 18

1.5.1 Constraint Contact Formulation..... 19

1.5.2 Elastic Contact Formulation 20

1.6 Specialized Railroad Vehicle Formulations 20

1.7 Linearized Railroad Vehicle Models 23

1.8 Motion Stability 24

1.9 Motion Scenarios 27

1.9.1 Hunting..... 28

1.9.2 Steady Curving..... 28

1.9.3 Spiral Negotiation 30

1.9.4 Twist and Roll 30

1.9.5 Pitch and Bounce 31

1.9.6 Yaw and Sway..... 31

1.9.7 Dynamic Curving..... 31

1.9.8 Response to Discontinuities..... 32

Chapter 2 Dynamic Formulations 35

2.1 General Displacement 36

2.2 Rotation Matrix 37

2.2.1 Direction Cosines 38

2.2.2 Simple Rotations 41

2.2.3 Euler Angles 41

2.2.4 Euler Parameters 45

2.3	Velocities and Accelerations	49
2.3.1	Velocity Vector	49
2.3.2	Acceleration Vector	50
2.3.3	Generalized Orientation Coordinates.....	51
2.3.4	Singular Configuration	53
2.4	Newton-Euler Equations	58
2.5	Joint Constraints.....	62
2.5.1	Spherical Joint.....	62
2.5.2	Revolute Joint.....	63
2.5.3	Cylindrical Joint.....	64
2.5.4	Prismatic Joint.....	65
2.6	Augmented Formulation	66
2.7	Trajectory Coordinates.....	70
2.7.1	Velocity and Acceleration	72
2.7.2	Equations of Motion	74
2.8	Embedding Technique.....	76
2.8.1	Coordinate Partitioning and Velocity Transformation.....	77
2.8.2	Elimination of the Constraint Forces.....	78
2.8.3	Reduced-Order Model.....	78
2.9	Interpretation of the Methods	80
2.9.1	Kinematic and Dynamic Equations	80
2.9.2	Augmented Formulation	83
2.9.3	Embedding Technique.....	84
2.9.4	D'Alembert's Principle	85
2.10	Virtual Work.....	86

Chapter 3 Rail and Wheel Geometry.....89

3.1	Theory of Curves	90
3.1.1	Arc Length and Tangent Line.....	90
3.1.2	Curvature and Torsion.....	91
3.2	Geometry of Surfaces	92
3.2.1	Tangent Plane and Normal Vector	94
3.2.2	First Fundamental Form.....	95
3.2.3	Second Fundamental Form	96
3.2.4	Normal Curvature.....	99
3.2.5	Principal Curvatures and Principal Directions	100
3.3	Rail Geometry	103
3.4	Definitions and Terminology	106
3.5	Geometric Description of the Track.....	108
3.6	Computer Implementation	111
3.6.1	Track Segment Types.....	112
3.6.2	Linear Representation of the Segments.....	112
3.6.3	Derivatives of the Angles.....	114
3.7	Track Preprocessor.....	116

3.7.1	Track Preprocessor Input	117
3.7.2	Numerical Integration	118
3.7.3	Track Preprocessor Output	120
3.7.4	Use of the Preprocessor Output during Dynamic Simulation	121
3.8	Wheel Geometry	123

Chapter 4 Contact and Creep-Force Models 127

4.1	Hertz Theory	128
4.1.1	Geometry and Kinematics	128
4.1.2	Contact Pressure.....	133
4.1.3	Computer Implementation	138
4.2	Creep Phenomenon	140
4.3	Wheel/Rail Contact Approaches.....	145
4.3.1	Exact Theory of Rolling Contact.....	146
4.3.2	Simplified Theory of Rolling Contact.....	147
4.3.3	Dynamic and Quasi-Static Theory	147
4.3.4	Three- and Two-Dimensional Theory.....	147
4.4	Creep-Force Theories.....	147
4.4.1	Carter's Theory.....	147
4.4.2	Johnson and Vermeulen's Theory	149
4.4.3	Kalker's Linear Theory	150
4.4.4	Heuristic Nonlinear Creep-Force Model	153
4.4.5	Polach Nonlinear Creep-Force Model.....	154
4.4.6	Simplified Theory.....	156
4.4.7	Kalker's USETAB	159

Chapter 5 Multibody Contact Formulations..... 161

5.1	Parameterization of Wheel and Rail Surfaces.....	162
5.1.1	Track Geometry	163
5.1.2	Wheel Geometry	165
5.2	Constraint Contact Formulations	165
5.2.1	Contact Constraints	166
5.2.2	Constrained Dynamic Equations	167
5.3	Augmented Constraint Contact Formulation (ACCF)	168
5.4	Embedded Constraint Contact Formulation (ECCF)	171
5.4.1	Position Analysis.....	172
5.4.2	Equations of Motion	173
5.5	Elastic Contact Formulation-Algebraic Equations (ECF-A).....	174
5.6	Elastic Contact Formulation-Nodal Search (ECF-N).....	177
5.7	Comparison of Different Contact Formulations.....	178
5.8	Planar Contact.....	179
5.8.1	Intermediate Wheel Coordinate System	181
5.8.2	Distance Traveled.....	182

5.8.3	Profile Parameters	184
5.8.4	Coupling between the Surface Parameters	185

Chapter 6 Implementation and Special Elements 187

6.1	General Multibody System Algorithms	188
6.1.1	Constrained Dynamics	188
6.1.2	Penalty and Constraint Stabilization Methods	189
6.1.3	Generalized Coordinates Partitioning	191
6.1.4	Identification of the Independent Coordinates	194
6.2	Numerical Algorithms — Constraint Formulations	194
6.2.1	Augmented Constraint Contact Formulation (ACCF)	195
6.2.2	Embedded Constraint Contact Formulation (ECCF)	201
6.3	Numerical Algorithms — Elastic Formulations	205
6.3.1	Elastic Contact Formulation Using Algebraic Equations (ECF-A)	206
6.3.2	Elastic Contact Formulation Using Nodal Search (ECF-N)	208
6.4	Calculation of the Creep Forces	210
6.5	Higher Derivatives and Smoothness Technique	211
6.6	Track Preprocessor	214
6.6.1	Change in the Length Due to Curvature	216
6.6.2	Use of the Preprocessor Output during Dynamic Simulation	218
6.7	Deviations and Measured Data	219
6.7.1	Track Deviations	220
6.7.2	Measured Track Data	222
6.7.3	Track Quality and Classes	223
6.8	Special Elements	225
6.8.1	Translational Spring-Damper-Actuator Element	227
6.8.2	Rotational Spring-Damper-Actuator Element	230
6.8.3	Series Spring-Damper Element	231
6.8.4	Bushing Element	232
6.9	Maglev Forces	236
6.9.1	Electrodynamic Suspension (EDS)	236
6.9.2	Electromagnetic Suspension (EMS)	237
6.9.3	Modeling of Electromagnetic Suspensions	237
6.9.4	Multibody System Electromechanical Equations	240
6.10	Static Analysis	242
6.10.1	Augmented Constraint Contact Formulation	242
6.10.2	Embedded Constraint Contact Formulation	244
6.10.3	Line Search Method	245
6.10.4	Continuation Method	246
6.11	Numerical Comparative Study	247
6.11.1	Simple Suspended Wheelset	247
6.11.2	Complete Vehicle Model	248

Chapter 7 Specialized Railroad Vehicle Formulations	255
7.1 General Displacement	256
7.1.1 Trajectory Coordinate System	256
7.1.2 Body Coordinate System	258
7.1.3 Generalized Trajectory Coordinates	259
7.2 Velocity and Acceleration	260
7.2.1 Velocity of the Center of Mass.....	260
7.2.2 Acceleration of the Center of Mass.....	261
7.2.3 Angular Velocity and Acceleration	262
7.3 Equations of Motion	264
7.4 Trajectory Coordinate Constraints	265
7.4.1 Numerical Example.....	266
7.4.2 Use of the Cartesian Coordinates	269
7.5 Single-Degree-of-Freedom Model	272
7.6 Two-Degree-of-Freedom Model	277
7.7 Linear Hunting Stability Analysis	280
7.7.1 Model 1	287
7.7.2 Model 2	288
 Chapter 8 Creepage Linearization	 291
8.1 Background	291
8.2 Transformation and Angular Velocity.....	295
8.2.1 Matrix Identities.....	295
8.2.2 Definition of the Angular Velocity	296
8.3 Euler Angles.....	298
8.4 Linearization Assumptions.....	300
8.5 Longitudinal and Lateral Creepages.....	301
8.6 Spin Creepage	305
8.7 Newton-Euler Equations	306
8.8 Concluding Remarks.....	309
 Appendix A Contact Equations.....	 313
Appendix B Elliptical Integrals.....	319
References.....	321
Index.....	333
