

TABLE OF CONTENTS

1	Applied Linear Algebra	1
1.1	Four Special Matrices	1
1.2	Differences, Derivatives, Boundary Conditions	13
1.3	Elimination Leads to $K = LDL^T$	26
1.4	Inverses and Delta Functions	36
1.5	Eigenvalues and Eigenvectors	46
1.6	Positive Definite Matrices	66
1.7	Numerical Linear Algebra: LU , QR , SVD	78
1.8	Best Basis from the SVD	92
2	A Framework for Applied Mathematics	98
2.1	Equilibrium and the Stiffness Matrix	98
2.2	Oscillation by Newton's Law	111
2.3	Least Squares for Rectangular Matrices	128
2.4	Graph Models and Kirchhoff's Laws	142
2.5	Networks and Transfer Functions	156
2.6	Nonlinear Problems	171
2.7	Structures in Equilibrium	185
2.8	Covariances and Recursive Least Squares	200
* 2.9	Graph Cuts and Gene Clustering	217
3	Boundary Value Problems	229
3.1	Differential Equations and Finite Elements	229
3.2	Cubic Splines and Fourth-Order Equations	245
3.3	Gradient and Divergence	255
3.4	Laplace's Equation	269
3.5	Finite Differences and Fast Poisson Solvers	283
3.6	The Finite Element Method	293
3.7	Elasticity and Solid Mechanics	310
4	Fourier Series and Integrals	317
4.1	Fourier Series for Periodic Functions	317
4.2	Chebyshev, Legendre, and Bessel	334
4.3	Discrete Fourier Transform and the FFT	346
4.4	Convolution and Signal Processing	356
4.5	Fourier Integrals	367
4.6	Deconvolution and Integral Equations	381
4.7	Wavelets and Signal Processing	388

5	Analytic Functions	403
5.1	Taylor Series and Complex Integration	403
5.2	Famous Functions and Great Theorems	419
5.3	The Laplace Transform and z -Transform	426
5.4	Spectral Methods of Exponential Accuracy	440
6	Initial Value Problems	456
6.1	Introduction	456
6.2	Finite Difference Methods	461
6.3	Accuracy and Stability for $u_t = c u_x$	472
6.4	Wave Equations and Staggered Leapfrog	485
6.5	Diffusion, Convection, and Finance	500
6.6	Nonlinear Flow and Conservation Laws	517
6.7	Fluid Flow and Navier-Stokes	533
6.8	Level Sets and Fast Marching	547
7	Solving Large Systems	551
7.1	Elimination with Reordering	551
7.2	Iterative Methods	563
7.3	Multigrid Methods	571
7.4	Krylov Subspaces and Conjugate Gradients	586
8	Optimization and Minimum Principles	598
8.1	Two Fundamental Examples	598
8.2	Regularized Least Squares	613
8.3	Calculus of Variations	627
8.4	Errors in Projections and Eigenvalues	646
8.5	The Saddle Point Stokes Problem	652
8.6	Linear Programming and Duality	661
8.7	Adjoint Methods in Design	678
	Linear Algebra in a Nutshell	685
	Sampling and Aliasing	691
	Computational Science and Engineering	694
	Bibliography	698
	Index	704
