CONTENTS

1 SOME INTRODUCTORY COMMENTS *1*

1.1 The Simple Steam Power Plant, *1*
1.2 Fuel Cells, *2*
1.3 The Vapor-Compression Refrigeration Cycle, *5*
1.4 The Thermoelectric Refrigerator, *7*
1.5 The Air Separation Plant, *8*
1.6 The Gas Turbine, *9*
1.7 The Chemical Rocket Engine, *11*
1.8 Other Applications and Environmental Issues, *12*

2 SOME CONCEPTS AND DEFINITIONS *14*

2.1 A Thermodynamic System and the Control Volume, *14*
2.2 Macroscopic Versus Microscopic Point of View, *15*
2.3 Properties and State of a Substance, *16*
2.4 Processes and Cycles, *17*
2.5 Units for Mass, Length, Time, and Force, *18*
2.6 Energy, *21*
2.7 Specific Volume and Density, *23*
2.8 Pressure, *25*
2.9 Equality of Temperature, *31*
2.10 The Zeroth Law of Thermodynamics, *31*
2.11 Temperature Scales, *32*
Problems, *34*

3 PROPERTIES OF A PURE SUBSTANCE *43*

3.1 The Pure Substance, *44*
3.2 Vapor-Liquid-Solid-Phase Equilibrium in a Pure Substance, *44*
3.3 Independent Properties of a Pure Substance, *51*
3.4 Tables of Thermodynamic Properties, *51*
3.5 Thermodynamic Surfaces, *59*
3.6 The *P-V-T* Behavior of Low- and Moderate-Density Gases, *61*
3.7 Computerized Tables, *69*
Problems, *72*

4 WORK AND HEAT *84*

4.1 Definition of Work, *84*
4.2 Units for Work, *86*
4.3 Work Done at the Moving Boundary of a Simple Compressible System, *87*
4.4 Other Systems that Involve Work, *96*
4.5 Concluding Remarks Regarding Work, *98*

4.6 Definition of Heat, *100*
4.7 Heat Transfer Modes, *101*
4.8 Comparison of Heat and Work, *103*
Problems, *105*

5 THE FIRST LAW OF THERMODYNAMICS *116*
5.1 The First Law of Thermodynamics for a Control Mass Undergoing a Cycle, *116*
5.2 The First Law of Thermodynamics for a Change in State of a Control Mass, *117*
5.3 Internal Energy—A Thermodynamic Property, *124*
5.4 Problem Analysis and Solution Technique, *126*
5.5 The Thermodynamic Property Enthalpy, *130*
5.6 The Constant-Volume and Constant-Pressure Specific Heats, *133*
5.7 The Internal Energy, Enthalpy, and Specific Heat of Ideal Gases, *135*
5.8 The First Law as a Rate Equation, *141*
5.9 Conservation of Mass, *143*
Problems, *145*

6 FIRST LAW ANALYSIS FOR A CONTROL VOLUME *162*
6.1 Conservation of Mass and the Control Volume, *162*
6.2 The First Law of Thermodynamics for a Control Volume, *165*
6.3 The Steady-State Process, *167*
6.4 Examples of Steady-State Processes, *169*
6.5 The Transient Process, *183*
Problems, *195*

7 THE SECOND LAW OF THERMODYNAMICS *214*
7.1 Heat Engines and Refrigerators, *214*
7.2 The Second Law of Thermodynamics, *220*
7.3 The Reversible Process, *223*
7.4 Factors that Render Processes Irreversible, *224*
7.5 The Carnot Cycle, *227*
7.6 Two Propositions Regarding the Efficiency of a Carnot Cycle, *229*
7.7 The Thermodynamic Temperature Scale, *230*
7.8 The Ideal-Gas Temperature Scale, *233*
7.9 Ideal versus Real Machines, *236*
Problems, *240*

8 ENTROPY *251*
8.1 The Inequality of Clausius, *251*
8.2 Entropy—A Property of a System, *255*
8.3 The Entropy of a Pure Substance, *257*
8.4 Entropy Change in Reversible Processes, *259*
8.5 The Thermodynamic Property Relation, *263*

8.6 Entropy Change of a Control Mass During an Irreversible Process, *264*
8.7 Entropy Generation, *266*
8.8 Principle of the Increase of Entropy, *268*
8.9 Entropy Change of a Solid or Liquid, *272*
8.10 Entropy Change of an Ideal Gas, *273*
8.11 The Reversible Polytropic Process for an Ideal Gas, *278*
8.12 Entropy as a Rate Equation, *282*
Problems, *285*

9 SECOND LAW ANALYSIS FOR A CONTROL VOLUME *302*
9.1 The Second Law of Thermodynamics for a Control Volume, *302*
9.2 The Steady-State Process and the Transient Process, *304*
9.3 The Reversible Steady-State Process, *313*
9.4 Principle of the Increase of Entropy, *316*
9.5 Efficiency, *317*
9.6 Some General Comments Regarding Entropy, *323*
Problems, *325*

10 IRREVERSIBILITY AND AVAILABILITY *343*
10.1 Available Energy, Reversible Work, and Irreversibility, *343*
10.2 Availability and Second-Law Efficiency, *355*
10.3 Exergy Balance Equation, *363*
Problems, *370*

11 POWER AND REFRIGERATION SYSTEMS *382*
11.1 Introduction to Power Systems, *382*
11.2 The Rankine Cycle, *384*
11.3 Effect of Pressure and Temperature on the Rankine Cycle, *388*
11.4 The Reheat Cycle, *393*
11.5 The Regernative Cycle, *396*
11.6 Deviation of Actual Cycles from Ideal Cycles, *403*
11.7 Cogeneration, *409*
11.8 Air-Standard Power Cycles, *410*
11.9 The Brayton Cycle, *411*
11.10 The Simple Gas-Turbine Cycle with a Regenerator, *418*
11.11 Gas-Turbine Power Cycle Configurations, *421*
11.12 The Air-Standard Cycle for Jet Propulsion, *424*
11.13 Reciprocating Engine Power Cycles, *426*
11.14 The Otto Cycle, *427*
11.15 The Diesel Cycle, *431*
11.16 The Stirling Cycle, *433*
11.17 Introduction to Refrigeration Systems, *434*
11.18 The Vapor-Compression Refrigeration Cycle, *435*
11.19 Working Fluids for Vapor-Compression Refrigeration Systems, *438*

11.20 Deviation of the Actual Vapor-Compression Refrigeration Cycle from the Ideal Cycle, *439*
11.21 The Ammonia Absorption Refrigeration Cycle, *441*
11.22 The Air-Standard Refrigeration Cycle, *442*
11.23 Combined-Cycle Power and Refrigeration Systems, *446*
Problems, *450*

12 GAS MIXTURES *473*
12.1 General Considerations and Mixtures of Ideal Gases, *473*
12.2 A Simplified Model of a Mixture Involving Gases and a Vapor, *480*
12.3 The First Law Applied to Gas-Vapor Mixtures, *485*
12.4 The Adiabatic Saturation Process, *488*
12.5 Wet-Bulb and Dry-Bulb Temperatures, *490*
12.6 The Psychrometric Chart, *491*
Problems, *494*

13 THERMODYNAMIC RELATIONS *511*
13.1 The Clapeyron Equation, *511*
13.2 Mathematical Relations for a Homogeneous Phase, *515*
13.3 The Maxwell Relations, *516*
13.4 Thermodynamic Relations Involving Enthalpy, Internal Energy, and Entropy, *519*
13.5 Volume Expansivity and Isothermal and Adiabatic Compressibility, *524*
13.6 Real Gas Behavior and Equations of State, *527*
13.7 The Generalized Chart for Changes of Enthalpy at Constant Temperature, *532*
13.8 The Generalized Chart for Changes of Entropy at Constant Temperature, *535*
13.9 Developing Tables of Thermodynamic Properties from Experimental Data, *538*
13.10 The Property Relation for Mixtures, *540*
13.11 Pseudopure Substance Models for Real-Gas Mixtures, *543*
Problems, *550*

14 CHEMICAL REACTIONS *561*
14.1 Fuels, *561*
14.2 The Combustion Process, *564*
14.3 Enthalpy of Formation, *572*
14.4 First-Law Analysis of Reacting Systems, *574*
14.5 Enthalpy and Internal Energy of Combustion; Heat of Reaction, *581*
14.6 Adiabatic Flame Temperature, *585*
14.7 The Third Law of Thermodynamics and Absolute Entropy, *587*
14.8 Second-Law Analysis of Reacting Systems, *589*
14.9 Fuel Cells, *596*
14.10 Evaluation of Actual Combustion Processes, *599*
Problems, *604*

15 INTRODUCTION TO PHASE AND CHEMICAL EQUILIBRIUM 617

15.1 Requirements for Equilibrium, *617*
15.2 Equilibrium Between Two Phases of a Pure Substance, *619*
15.3 Metastable Equilibrium, *623*
15.4 Chemical Equilibrium, *625*
15.5 Simultaneous Reactions, *634*
15.6 Ionization, *638*
Problems, *643*

16 COMPRESSIBLE FLOW *W16-1*
(*available on the website:* ***www.wiley.com/college/sonntag***)

16.1 Stagnation Properties, *W16-1*
16.2 The Momentum Equation for a Control Volume, *W16-3*
16.3 Forces Acting on a Control Surface, *W16-6*
16.4 Adiabatic, One-Dimensional, Steady-State Flow of an Incompressible Fluid Through a Nozzle, *W16-8*
16.5 Velocity of Sound in an Ideal Gas, *W16-10*
16.6 Reversible, Adiabatic, One-Dimensional Flow of an Ideal Gas through a Nozzle, *W16-12*
16.7 Mass Rate of Flow of an Ideal Gas through an Isentropic Nozzle, *W16-16*
16.8 Normal Shock in an Ideal Gas Flowing through a Nozzle, *W16-20*
16.9 Nozzle and Diffuser Coefficients, *W16-26*
16.10 Nozzle and Orifices as Flow-Measuring Devices, *W16-28*
Problems, *W16-37*

CONTENTS OF APPENDIX

APPENDIX A SI UNITS: SINGLE STATE PROPERTIES 653

APPENDIX B SI UNITS: THERMODYNAMIC TABLES 673

APPENDIX C IDEAL-GAS SPECIFIC HEAT 723

APPENDIX D EQUATIONS OF STATE 725

APPENDIX E FIGURES 731

APPENDIX F ENGLISH UNIT TABLES 737

ANSWERS TO SELECTED PROBLEMS 779
