Section I Basics

1. Introduction 3

1.1 Scope of the Book 3

1.2 Mechanical Engineering Design..... 4

1.2.1 ABET Definition of Design..... 5

1.3 Design Process..... 5

1.3.1 Phases of Design 6

1.3.1.1 Identification of Need 6

1.3.1.2 Definition of the Problem..... 6

1.3.1.3 Synthesis..... 7

1.3.1.4 Analysis 7

1.3.1.5 Testing and Evaluation..... 7

1.3.1.6 Presentation..... 7

1.3.2 Design Considerations 8

1.4 Design Analysis 8

1.4.1 Engineering Modeling 8

1.4.2 Rational Design Procedure..... 9

1.4.3 Methods of Analysis..... 9

1.5 Problem Formulation and Computation 10

1.5.1 Solving Mechanical Component Problems..... 10

1.5.1.1 Significant Digits 11

1.5.2 Computational Tools for Design Problems 11

1.5.3 Best Time to Solve Problems 12

1.6 Factor of Safety and Design Codes..... 12

1.6.1 Definitions..... 13

1.6.2 Selection of a Factor of Safety 13

1.6.3 Design and Safety Codes..... 14

1.7 Units and Conversion..... 15

1.8 Loading Classes and Equilibrium..... 16

1.8.1 Conditions of Equilibrium..... 17

1.8.2 Internal Load Resultants..... 18

1.8.3 Sign Convention 19

1.9 Free-Body Diagrams and Load Analysis 19

1.10 Case Studies in Engineering 23

1.11 Work, Energy, and Power..... 26

1.11.1 Transmission of Power by Rotating Shafts and Wheels 28

- 1.12 Stress Components.....30
 - 1.12.1 Sign Convention.....31
 - 1.12.2 Special Cases of State of Stress.....32
- 1.13 Normal and Shear Strains33
- Problems.....35

- 2. Materials.....47**
 - 2.1 Introduction47
 - 2.2 Material Property Definitions.....47
 - 2.3 Static Strength.....49
 - 2.3.1 Stress–Strain Diagrams for Ductile Materials.....49
 - 2.3.1.1 Yield Strength50
 - 2.3.1.2 Strain Hardening: Cold Working.....52
 - 2.3.1.3 Ultimate Tensile Strength52
 - 2.3.1.4 Offset Yield Strength53
 - 2.3.2 Stress–Strain Diagram for Brittle Materials.....53
 - 2.3.3 Stress–Strain Diagrams in Compression.....53
 - 2.4 Hooke’s Law and Modulus of Elasticity54
 - 2.5 Generalized Hooke’s Law57
 - 2.5.1 Volume Change58
 - 2.6 Thermal Stress–Strain Relations.....62
 - 2.7 Temperature and Stress–Strain Properties63
 - 2.7.1 Short-Time Effects of Elevated and Low Temperatures63
 - 2.7.2 Long-Time Effects of Elevated Temperatures: Creep.....64
 - 2.8 Moduli of Resilience and Toughness65
 - 2.8.1 Modulus of Resilience65
 - 2.8.2 Modulus of Toughness.....66
 - 2.9 Dynamic and Thermal Effects68
 - 2.9.1 Strain Rate.....69
 - 2.9.2 Ductile–Brittle Transition69
 - 2.10 Hardness72
 - 2.10.1 Brinell Hardness73
 - 2.10.2 Rockwell Hardness.....73
 - 2.10.3 Vickers Hardness.....73
 - 2.10.4 Shore Scleroscope.....73
 - 2.10.5 Relationships among Hardness and Ultimate Strength in Tension.....74
 - 2.11 Processes to Improve Hardness and the Strength of Metals.....75
 - 2.11.1 Mechanical Treatment.....75
 - 2.11.1.1 Cold Working.....76
 - 2.11.1.2 Hot Working.....76
 - 2.11.2 Heat Treatment.....76
 - 2.11.3 Coatings.....77
 - 2.11.3.1 Galvanization.....78
 - 2.11.3.2 Electroplating.....78
 - 2.11.3.3 Anodizing78
 - 2.12 General Properties of Metals.....78
 - 2.12.1 Iron and Steel.....79
 - 2.12.2 Cast Irons79

2.12.3	Steels	79
2.12.3.1	Plain Carbon Steels	80
2.12.3.2	Alloy Steels.....	80
2.12.3.3	Stainless Steels	80
2.12.3.4	Steel Numbering Systems	81
2.12.4	Aluminum and Copper Alloys.....	82
2.13	General Properties of Nonmetals	82
2.13.1	Plastics	83
2.13.2	Ceramics and Glasses.....	84
2.13.3	Composites.....	84
2.13.3.1	Fiber-Reinforced Composite Materials	85
2.14	Selecting Materials.....	86
2.14.1	Strength Density Chart.....	86
	Problems.....	88
3.	Stress and Strain.....	95
3.1	Introduction	95
3.2	Stresses in Axially Loaded Members.....	95
3.2.1	Design of Tension Members	96
3.3	Direct Shear Stress and Bearing Stress	98
3.4	Thin-Walled Pressure Vessels	100
3.5	Stress in Members in Torsion	102
3.5.1	Circular Cross Sections.....	102
3.5.2	Noncircular Cross Sections	104
3.6	Shear and Moment in Beams.....	107
3.6.1	Load, Shear, and Moment Relationships.....	107
3.6.2	Shear and Moment Diagrams	108
3.7	Stresses in Beams	110
3.7.1	Assumptions of Beam Theory	110
3.7.2	Normal Stress	111
3.7.2.1	Curved Beam of a Rectangular Cross Section	113
3.7.3	Shear Stress.....	114
3.7.3.1	Rectangular Cross Section	114
3.7.3.2	Various Cross Sections	115
3.8	Design of Beams.....	118
3.8.1	Prismatic Beams.....	118
3.8.2	Beams of Constant Strength.....	120
3.8.3	Composite Beams.....	123
3.9	Plane Stress	125
3.9.1	Mohr's Circle for Stress	128
3.9.1.1	Axial Loading	130
3.9.1.2	Torsion.....	130
3.10	Combined Stresses.....	132
3.11	Plane Strain	137
3.11.1	Mohr's Circle for Strain.....	138
3.12	Measurement of Strain; Strain Rosette	140
3.13	Stress-Concentration Factors	142

3.14	Importance of Stress-Concentration Factors in Design.....	144
3.14.1	Fatigue Loading	144
3.14.2	Static Loading.....	145
*3.15	Three-Dimensional Stress.....	147
3.15.1	Principal Stresses in Three Dimensions.....	148
3.15.2	Simplified Transformation for Three-Dimensional Stress	150
3.15.3	Octahedral Stresses	151
*3.16	Equations of Equilibrium for Stress	153
*3.17	Strain–Displacement Relations: Exact Solutions	154
3.17.1	Problems in Applied Elasticity	155
	Problems.....	156
4.	Deflection and Impact.....	173
4.1	Introduction	173
4.1.1	Comparison of Various Deflection Methods	173
4.2	Deflection of Axially Loaded Members.....	174
4.3	Angle of Twist of Shafts	179
4.3.1	Circular Sections.....	179
4.3.2	Noncircular Sections	180
4.4	Deflection of Beams by Integration.....	181
4.5	Beam Deflections by Superposition	184
4.6	Beam Deflection by the Moment-Area Method.....	189
4.6.1	Moment-Area Theorems.....	189
4.6.2	Application of the Moment-Area Method.....	190
4.7	Impact Loading	194
4.8	Longitudinal and Bending Impact.....	195
4.8.1	Freely Falling Weight	195
4.8.2	Horizontally Moving Weight	197
4.9	Torsional Impact.....	202
*4.10	Bending of Thin Plates	205
4.10.1	Basic Assumptions.....	205
4.10.2	Strain–Displacement Relations	206
4.10.3	Plate Stress, Curvature, and Moment Relations.....	207
4.11	Deflection of Plates by Integration	208
4.11.1	Boundary Conditions.....	209
	Problems.....	211
5.	Energy Methods and Stability.....	225
5.1	Introduction	225
5.2	Strain Energy	226
5.2.1	Components of Strain Energy	227
5.3	Strain Energy in Common Members	229
5.3.1	Axially Loaded Bars.....	229
5.3.2	Circular Torsion Bars.....	231
5.3.3	Beams.....	232
5.4	Work–Energy Method	234
5.5	Castigliano’s Theorem.....	235
5.5.1	Application to Trusses.....	240

5.6 Statically Indeterminate Problems 242

5.7 Virtual Work Principle 246

5.7.1 Castigliano's First Theorem..... 247

*5.8 Use of Trigonometric Series in Energy Methods..... 247

5.9 Buckling of Columns..... 250

5.9.1 Pin-Ended Columns 250

5.9.2 Columns with Other End Conditions..... 252

5.10 Critical Stress in a Column..... 253

5.10.1 Long Columns..... 254

5.10.2 Short Columns or Struts 255

5.10.3 Intermediate Columns 255

5.11 Initially Curved Columns..... 261

5.11.1 Total Deflection 262

5.11.2 Critical Stress..... 262

5.12 Eccentric Loads and the Secant Formula..... 263

5.12.1 Short Columns..... 266

5.13 Design Formulas for Columns 268

*5.14 Beam-Columns 272

*5.15 Energy Methods Applied to Buckling 275

*5.16 Buckling of Rectangular Plates..... 278

Problems..... 280

Section II Failure Prevention

6. Static Failure Criteria and Reliability 303

6.1 Introduction 303

6.2 Introduction to Fracture Mechanics..... 303

6.3 Stress-Intensity Factors..... 304

6.4 Fracture Toughness..... 306

6.5 Yield and Fracture Criteria 311

6.6 Maximum Shear Stress Theory..... 312

6.6.1 Typical Case of Combined Loading..... 313

6.7 Maximum Distortion Energy Theory 315

6.7.1 Yield Surfaces for Triaxial State of Stress 316

6.7.2 Typical Case of Combined Loading..... 317

6.8 Octahedral Shear Stress Theory 317

6.9 Comparison of the Yielding Theories 321

6.10 Maximum Principal Stress Theory 321

6.11 Mohr's Theory 323

6.12 Coulomb-Mohr Theory 324

6.13 Reliability 327

6.14 Normal Distributions 328

6.15 Reliability Method and Margin of Safety..... 330

Problems..... 333

7. Fatigue Failure Criteria 343

7.1 Introduction 343

7.2 Nature of Fatigue Failures 344

7.3	Fatigue Tests.....	345
7.3.1	Reversed Bending Test.....	345
7.4	S–N Diagrams.....	347
7.4.1	Endurance Limit and Fatigue Strength	348
7.4.1.1	Bending Fatigue Strength	348
7.4.1.2	Axial Fatigue Strength.....	349
7.4.1.3	Torsional Fatigue Strength.....	349
7.4.2	Fatigue Regimes.....	350
7.5	Estimating the Endurance Limit and Fatigue Strength	350
7.6	Modified Endurance Limit	352
7.7	Endurance Limit Reduction Factors.....	352
7.7.1	Surface Finish Factor	353
7.7.2	Reliability Factor	354
7.7.3	Size Factor	354
7.7.4	Temperature Factor.....	355
7.7.5	Fatigue Stress-Concentration Factor	355
7.8	Fluctuating Stresses.....	358
7.9	Theories of Fatigue Failure	360
7.10	Comparison of the Fatigue Criteria.....	361
7.11	Design for Simple Fluctuating Loads.....	362
7.11.1	Design Graphs of Failure Criteria	364
7.12	Design for Combined Fluctuating Loads	370
7.12.1	Alternative Derivation	372
7.13	Prediction of Cumulative Fatigue Damage.....	372
7.13.1	Miner’s Cumulative Rule.....	373
7.14	Fracture Mechanics Approach to Fatigue	374
	Problems.....	376
8.	Surface Failure	385
8.1	Introduction	385
8.2	Corrosion.....	385
8.2.1	Corrosion and Stress Combined.....	386
8.2.1.1	Stress Corrosion.....	386
8.2.1.2	Corrosion Fatigue.....	388
8.2.2	Corrosion Wear	389
8.2.2.1	Fretting	389
8.2.2.2	Cavitation Damage.....	389
8.3	Friction.....	390
8.4	Wear	391
8.4.1	Adhesive Wear	391
8.4.2	Abrasive Wear	392
8.5	Wear Equation.....	392
8.6	Contact-Stress Distributions.....	396
8.7	Spherical and Cylindrical Surfaces in Contact	397
8.7.1	Two Spheres in Contact.....	398
8.7.2	Two Cylinders in Contact	400
*8.8	Maximum Stress in General Contact	403

8.9 Surface-Fatigue Failure 407

8.9.1 Stresses Affecting Surface Fatigue 408

8.10 Prevention of Surface Damage 409

Problems..... 410

Section III Applications

9. Shafts and Associated Parts 417

9.1 Introduction 417

9.2 Materials Used for Shafting..... 418

9.3 Design of Shafts in Steady Torsion 419

9.4 Combined Static Loadings on Shafts 420

9.4.1 Bending, Torsion, and Axial Loads 420

9.4.2 Bending and Torsion 421

9.5 Design of Shafts for Fluctuating and Shock Loads..... 426

9.5.1 Shock Factors 427

9.5.2 Steady-State Operation..... 427

9.5.3 Displacements 428

9.6 Interference Fits 432

9.7 Critical Speed of Shafts 433

9.7.1 Rayleigh Method 433

9.7.2 Dunkerley’s Method..... 434

9.7.3 Shaft Whirl..... 434

9.8 Mounting Parts..... 438

9.8.1 Keys..... 438

9.8.2 Pins..... 438

9.8.3 Screws..... 438

9.8.4 Rings and Collars..... 439

9.8.5 Methods of Axially Positioning of Hubs..... 440

9.9 Stresses in Keys 440

9.10 Splines..... 442

9.11 Couplings 443

9.11.1 Clamped Rigid Couplings..... 443

9.11.2 Flanged Rigid Couplings..... 444

9.11.3 Flexible Couplings 445

9.12 Universal Joints 446

Problems..... 447

10. Bearings and Lubrication..... 457

10.1 Introduction..... 457

Part A: Lubrication and Journal Bearings..... 457

10.2 Lubricants..... 458

10.2.1 Liquid Lubricants..... 458

10.2.2 Solid Lubricants 458

10.3 Types of Journal Bearings..... 459

10.4 Forms of Lubrication460

10.4.1 Hydrodynamic Lubrication.....461

10.4.2 Mixed Lubrication461

10.4.3 Boundary Lubrication461

10.4.4 Elastohydrodynamic Lubrication.....462

10.4.5 Hydrostatic Lubrication462

10.5 Lubricant Viscosity465

10.5.1 Units of Viscosity466

10.5.2 Viscosity in terms of Saybolt Universal Seconds466

10.5.3 Effects of Temperature and Pressure467

10.6 Petroff’s Bearing Equation.....469

10.6.1 Friction Torque470

10.6.2 Friction Power.....471

10.7 Hydrodynamic Lubrication Theory472

10.7.1 Reynolds’s Equation of Hydrodynamic Lubrication472

10.7.1.1 Long Bearings.....472

10.7.1.2 Short Bearings.....475

10.8 Design of Journal Bearings.....475

10.8.1 Lubricants476

10.8.2 Bearing Load476

10.8.3 Length–Diameter Ratio.....476

10.8.4 Clearance.....476

10.8.5 Design Charts.....476

10.9 Lubricant Supply to Journal Bearings.....481

10.9.1 Splash Method.....481

10.9.2 Miscellaneous Methods481

10.9.3 Pressure-Fed Systems.....482

10.9.4 Methods for Oil Distribution482

10.10 Heat Balance of Journal Bearings483

10.10.1 Heat Dissipated483

10.10.2 Heat Developed.....484

10.11 Materials for Journal Bearings484

10.11.1 Alloys.....484

10.11.2 Sintered Materials.....486

10.11.3 Nonmetallic Materials.....486

Part B: Rolling-Element Bearings.....486

10.12 Types and Dimensions of Rolling Bearings.....487

10.12.1 Ball Bearings.....487

10.12.2 Roller Bearings489

10.12.3 Special Bearings490

10.12.4 Standard Dimensions for Bearings490

10.13 Rolling Bearing Life.....492

10.14 Equivalent Radial Load.....493

10.14.1 Equivalent Shock Loading.....493

10.15 Selection of Rolling Bearings495

10.15.1 Reliability Requirement496

10.16 Materials and Lubricants of Rolling Bearings499

10.17 Mounting and Closure of Rolling Bearings500

Problems.....502

11. Spur Gears.....	507
11.1 Introduction	507
11.2 Geometry and Nomenclature	508
11.2.1 Properties of Gear Tooth.....	509
11.3 Fundamentals	512
11.3.1 Basic Law of Gearing.....	512
11.3.2 Involute Tooth Form	513
11.4 Gear Tooth Action and Systems of Gearing.....	514
11.4.1 Standard Gear Teeth.....	514
11.5 Contact Ratio and Interference	517
11.6 Gear Trains.....	519
11.6.1 Planetary Gear Trains	521
11.7 Transmitted Load.....	523
11.7.1 Dynamic Effects	524
11.8 Bending Strength of a Gear Tooth: The Lewis Formula	526
11.8.1 Uniform Strength Gear Tooth.....	527
11.8.2 Effect of Stress Concentration	529
11.8.3 Requirement for Satisfactory Gear Performance	530
11.9 Design for the Bending Strength of a Gear Tooth: The AGMA Method	531
11.10 Wear Strength of a Gear Tooth: The Buckingham Formula	537
11.11 Design for the Wear Strength of a Gear Tooth: The AGMA Method.....	540
11.12 Materials for Gears	545
11.13 Gear Manufacturing.....	545
11.13.1 Forming Gear Teeth.....	546
11.13.2 Finishing Processes	547
Problems.....	547
 12. Helical, Bevel, and Worm Gears.....	 555
12.1 Introduction	555
12.2 Helical Gears.....	555
12.3 Helical Gear Geometry	557
12.3.1 Virtual Number of Teeth	559
12.3.2 Contact Ratios.....	559
12.4 Helical Gear Tooth Loads	561
12.5 Helical Gear Tooth Bending and Wear Strengths.....	562
12.5.1 Lewis Equation.....	562
12.5.2 Buckingham Equation.....	563
12.5.3 AGMA Equations.....	563
12.6 Bevel Gears.....	570
12.6.1 Straight Bevel Gears	571
12.6.1.1 Geometry.....	571
12.6.2 Virtual Number of Teeth	573
12.7 Tooth Loads of Straight Bevel Gears	573
12.8 Bevel Gear Tooth Bending and Wear Strengths.....	575
12.8.1 Lewis Equation.....	575
12.8.2 Buckingham Equation.....	576
12.8.3 AGMA Equations.....	576
12.9 Worm Gearsets	578
12.9.1 Worm Gear Geometry.....	578

12.10	Worm Gear Bending and Wear Strengths.....	581
12.10.1	Lewis Equation.....	581
12.10.2	Limit Load for Wear	582
12.10.3	AGMA Equations.....	582
12.11	Thermal Capacity of Worm Gearsets.....	582
12.11.1	Worm Gear Efficiency	584
	Problems.....	587
13.	Belts, Chains, Clutches, and Brakes	593
13.1	Introduction	593
	Part A: Flexible Elements	594
13.2	Belts	594
13.2.1	Flat and Round Belts	594
13.2.2	V Belts.....	595
13.2.3	Timing Belts.....	595
13.3	Belt Drives.....	597
13.3.1	Transmitted Power.....	598
13.3.2	Contact Angle.....	598
13.3.3	Belt Length and Center Distance.....	599
13.3.4	Maintaining the Initial Tension of the Belt	601
13.4	Belt Tension Relationships.....	601
13.4.1	Flat or Round Belt Drives	602
13.4.2	V-Belt Drives.....	604
13.5	Design of V-Belt Drives	605
13.6	Chain Drives.....	608
13.7	Common Chain Types.....	610
13.7.1	Roller Chains	610
13.7.1.1	Chordal Action.....	610
13.7.2	Power Capacity of Roller Chains.....	612
13.7.3	Inverted-Tooth Chains	615
	Part B: High Friction Devices	616
13.8	Materials for Brakes and Clutches.....	616
13.9	Internal Expanding Drum Clutches and Brakes	618
13.10	Disk Clutches and Brakes	619
13.10.1	Disk Clutches.....	619
13.10.1.1	Uniform Wear	620
13.10.1.2	Uniform Pressure	621
13.10.2	Disk Brakes	622
13.10.2.1	Caliper-Type Disk Brakes	623
13.11	Cone Clutches and Brakes	625
13.11.1	Uniform Wear.....	625
13.11.2	Uniform Pressure.....	626
13.12	Band Brakes	628
13.13	Short-Shoe Drum Brakes.....	630
13.13.1	Self-Energizing and Self-Locking Brakes.....	631
13.14	Long-Shoe Drum Brakes.....	632
13.14.1	External Long-Shoe Drum Brakes.....	633
13.14.1.1	Symmetrically Loaded Pivot-Shoe Brakes.....	636
13.14.2	Internal Long-Shoe Drum Brakes.....	638

13.15	Energy Absorption and Cooling.....	639
13.15.1	Energy Sources.....	639
13.15.2	Temperature Rise.....	640
	Problems.....	641
14.	Mechanical Springs	649
14.1	Introduction	649
14.2	Torsion Bars.....	649
14.3	Helical Tension and Compression Springs	651
14.3.1	Stresses	652
14.3.2	Deflection	654
14.3.3	Spring Rate.....	655
14.4	Spring Materials.....	656
14.4.1	Spring Wire.....	657
14.4.1.1	Ultimate Strength in Tension	657
14.4.1.2	Yield Strength in Shear and Endurance Limit in Shear	658
14.5	Helical Compression Springs	660
14.5.1	Design Procedure for Static Loading	661
14.6	Buckling of Helical Compression Springs.....	663
14.6.1	Aspect Ratio.....	664
14.7	Fatigue of Springs	666
14.8	Design of Helical Compression Springs for Fatigue Loading.....	666
14.8.1	Goodman Criteria Helical Springs.....	667
14.8.2	Compression Spring Surge	668
14.9	Helical Extension Springs	671
14.9.1	Coil Body.....	672
14.9.2	End Hook Bending and Shear.....	672
14.10	Torsion Springs.....	675
14.10.1	Helical Torsion Springs.....	675
14.10.2	Fatigue Loading	677
14.10.3	Spiral Torsion Springs	677
14.11	Leaf Springs	678
14.11.1	Multileaf Springs	679
14.12	Miscellaneous Springs	682
14.12.1	Constant-Force Springs.....	683
14.12.2	Belleville Springs	683
14.12.3	Rubber Springs.....	686
	Problems.....	687
15.	Power Screws, Fasteners, and Connections.....	695
15.1	Introduction	695
15.2	Standard Thread Forms	695
15.2.1	Unified and ISO Thread Form	697
15.2.2	Power Screw Thread Forms	698
15.3	Mechanics of Power Screws.....	700
15.3.1	Torque to Lift the Load	702
15.3.2	Torque to Lower the Load.....	703
15.3.3	Values of Friction Coefficients.....	703
15.3.4	Values of Thread Angle in the Normal Plane.....	704

15.4	Overhauling and Efficiency of Power Screws.....	704
