

Contents

- 1 Introduction 1**
 - 1.1 Overview 1
 - 1.2 Research on Status of Vehicle State Estimation 3
 - 1.2.1 Estimation of Longitudinal Vehicle Velocity 4
 - 1.2.2 Estimation of Side Slip Angle 7
 - 1.2.3 Yaw Rate Estimation 11
 - 1.2.4 Estimation of Tire Lateral Force 11
 - 1.2.5 Estimation of Tire Vertical Force 13
 - 1.2.6 Estimation of Mass and Gradient 15
 - 1.3 Research Status of Coordinated Control 17
 - 1.3.1 Lateral Control Target 17
 - 1.3.2 Driving Force Control Allocation 23
 - 1.3.3 Motor Discrepancy Compensation 27
 - 1.4 Main Study Contents of This Dissertation 28
 - References 31
- 2 State Estimation and Coordinated Control System 37**
 - 2.1 Structural Design of the System 37
 - 2.2 Technological Difficulties and Key Points 42
- 3 State Estimation of Distributed Electric Vehicles 45**
 - 3.1 Mass Estimation of Full Vehicle Extraction Based on High Frequency Information 45
 - 3.1.1 Analysis on Decoupling of Mass and Gradient 46
 - 3.1.2 Mass Estimation by Recursive Least Square Method 48
 - 3.2 Gradient Estimation Based on Multi-method Fusion 50
 - 3.2.1 Gradient Estimation Based on Dynamics 50
 - 3.2.2 Gradient Estimation Based on Kinematics 52
 - 3.2.3 Fusion of Kinematics and Dynamics 53

3.3	Vertical Force Estimation of Tire Based on Multi-information Infusion	53
3.3.1	Estimation of Roll Angle and Roll Rate of Vehicle Body	54
3.3.2	Analysis on Dynamic Axle Load Transfer	56
3.4	Estimation of Vehicle Motion State and Lateral Force Based on UPF	57
3.4.1	Design of Unscented Particle Filter	58
3.4.2	Analysis on Non-linear Vehicle Dynamic Model	65
3.4.3	Analysis on Magic Formula Tire Model	70
3.4.4	Analysis on Dynamic Tire Model	74
3.4.5	Calibration of Inertial Sensor	74
3.4.6	Self-adaptive Adjustment of Measurement Noise	79
3.5	Brief Summary	80
	References	81
4	Coordinated Control of Distributed Electric Vehicles	85
4.1	Determination of Vehicle Dynamic Demand Target	86
4.1.1	Determination of Desired Longitudinal Driving Force	86
4.1.2	Lateral Control Target Based on Non-linear Model	87
4.1.3	Feedforward Control Based on Non-linear Vehicle Model	88
4.1.4	Design of Expected Vehicle Response Model	90
4.1.5	Optimum Feedback Control Based on LQR	90
4.1.6	Adjusting of Weight Coefficient of Lateral Control Target	92
4.2	Control Allocation	95
4.2.1	Design of Optimum Objective Function for Control Allocation	95
4.2.2	Establishment of Constraint Conditions of Control Model	99
4.2.3	Solution of Driving Force Allocation Based on QP	104
4.3	Motor Property Compensation Control	105
4.3.1	Analysis on Motor Response Properties	106
4.3.2	Self-Adaptive Motor Property Control	108
4.4	Brief Summary	111
	References	112
5	Simulation Verification on State Estimation and Coordinated Control	115
5.1	Development of Simulation Platform	115
5.1.1	Development of CarSim and Simulink Joint Simulation Platform	115
5.1.2	Design of Overall Structure of Simulation Platform	117

5.2	Simulation of State Estimation.	118
5.2.1	Simulation for Mass Estimation Based on High-Frequency Information Extraction	119
5.2.2	Algorithm Simulation for Gradient Estimation Based on Multi-method Fusion	123
5.2.3	Algorithm Simulation for Vertical Force Estimation Based on Multi-information Fusion	126
5.2.4	Simulation for Vehicle Motion State and Lateral Force Estimation Based on Unscented Particle Filter	130
5.3	Simulation of Coordinated Control Algorithm	141
5.3.1	Simulation of Motor Property Compensation Control Algorithm.	142
5.3.2	Simulation of Driving Force Control Allocation Algorithm.	145
5.3.3	Simulation of Determination Algorithm for Vehicle Dynamic Target	152
5.4	Brief Summary	156
	References	157
6	Experimental Verification of State Estimation and Coordinated Control	159
6.1	Experiment Platform of Distributed Electric Vehicle.	159
6.2	Experiment of State Estimation System	161
6.2.1	Experiment of Mass Estimation Based on High-Frequency Information Extraction	161
6.2.2	Experiment of Gradient Estimation Based on Multi-method Fusion.	163
6.2.3	Experiment of Vehicle Motion State Estimation Based on Unscented Particle Filter	165
6.3	Experiment of Coordinated Control	170
6.3.1	Experiment of Motor Property Compensation Control	170
6.3.2	Experiment of Control Allocation	172
6.3.3	Experiment of Vehicle Dynamic Demand Target Determination	178
6.4	Brief Summary	182
	References	183
7	Conclusions	185
