Preface	xi
How to Get the Software	xiii
1 Introduction	1
1.1 What Is the Problem?	1
1.1.1 Notation	1
1.2 Newton's Method	2
1.2.1 Local Convergence Theory	3
1.3 Approximating the Jacobian	5
1.4 Inexact Newton Methods	7
1.5 Termination of the Iteration	9
1.6 Global Convergence and the Armijo Rule	11
1.7 A Basic Algorithm	12
1.7.1 Warning!	14
1.8 Things to Consider	15
1.8.1 Human Time and Public Domain Codes	15
1.8.2 The Initial Iterate	15
1.8.3 Computing the Newton Step	16
1.8.4 Choosing a Solver	16
1.9 What Can Go Wrong?	17
1.9.1 Nonsmooth Functions	17
1.9.2 Failure to Converge	18
1.9.3 Failure of the Line Search	19
1.9.4 Slow Convergence	19
1.9.5 Multiple Solutions	20
1.9.6 Storage Problems	20
1.10 Three Codes for Scalar Equations	20
1.10.1 Common Features	21
1.10.2 <code>newtsol.m</code>	21
1.10.3 <code>chordsol.m</code>	22
1.10.4 <code>secant.m</code>	23
1.11 Projects	24

1.11.1	Estimating the q-order	24
1.11.2	Singular Problems	25
2	Finding the Newton Step with Gaussian Elimination	27
2.1	Direct Methods for Solving Linear Equations	27
2.2	The Newton–Armijo Iteration	28
2.3	Computing a Finite Difference Jacobian	29
2.4	The Chord and Shamanskii Methods	33
2.5	What Can Go Wrong?	34
2.5.1	Poor Jacobians	34
2.5.2	Finite Difference Jacobian Error	35
2.5.3	Pivoting	35
2.6	Using <code>nsold.m</code>	35
2.6.1	Input to <code>nsold.m</code>	36
2.6.2	Output from <code>nsold.m</code>	37
2.7	Examples	37
2.7.1	Arctangent Function	38
2.7.2	A Simple Two-Dimensional Example	39
2.7.3	Chandrasekhar H-equation	41
2.7.4	A Two-Point Boundary Value Problem	43
2.7.5	Stiff Initial Value Problems	47
2.8	Projects	50
2.8.1	Chandrasekhar H-equation	50
2.8.2	Nested Iteration	50
2.9	Source Code for <code>nsold.m</code>	51
3	Newton–Krylov Methods	57
3.1	Krylov Methods for Solving Linear Equations	57
3.1.1	GMRES	58
3.1.2	Low-Storage Krylov Methods	59
3.1.3	Preconditioning	60
3.2	Computing an Approximate Newton Step	61
3.2.1	Jacobian-Vector Products	61
3.2.2	Preconditioning Nonlinear Equations	61
3.2.3	Choosing the Forcing Term	62
3.3	Preconditioners	63
3.4	What Can Go Wrong?	64
3.4.1	Failure of the Inner Iteration	64
3.4.2	Loss of Orthogonality	64
3.5	Using <code>nsoli.m</code>	65
3.5.1	Input to <code>nsoli.m</code>	65
3.5.2	Output from <code>nsoli.m</code>	65
3.6	Examples	66
3.6.1	Chandrasekhar H-equation	66
3.6.2	The Ornstein–Zernike Equations	67
3.6.3	Convection-Diffusion Equation	71

3.6.4	Time-Dependent Convection-Diffusion Equation . .	73
3.7	Projects	74
3.7.1	Krylov Methods and the Forcing Term	74
3.7.2	Left and Right Preconditioning	74
3.7.3	Two-Point Boundary Value Problem	74
3.7.4	Making a Movie	75
3.8	Source Code for <code>nsoli.m</code>	76
4	Broyden's Method	85
4.1	Convergence Theory	86
4.2	An Algorithmic Sketch	86
4.3	Computing the Broyden Step and Update	87
4.4	What Can Go Wrong?	89
4.4.1	Failure of the Line Search	89
4.4.2	Failure to Converge	89
4.5	Using <code>brsola.m</code>	89
4.5.1	Input to <code>brsola.m</code>	90
4.5.2	Output from <code>brsola.m</code>	90
4.6	Examples	90
4.6.1	Chandrasekhar H-equation	91
4.6.2	Convection-Diffusion Equation	91
4.7	Source Code for <code>brsola.m</code>	93
	Bibliography	97
	Index	103
