Contributing Authors	ix
Preface	xi
Préface	xiii
Introduction	xv
<i>Teodor Gabriel Crainic and Gilbert Laporte</i>	
1	
EXACT SOLUTION OF THE VEHICLE ROUTING PROBLEM	1
<i>Paolo Toth, Daniele Vigo</i>	
1.1 Introduction	1
1.2 Problem Definition and Notation	3
1.3 Basic Reduction Rules	5
1.4 The Asymmetric CVRP	6
1.5 Branch-and-Bound Algorithms for the Symmetric CVRP	15
1.6 Branch-and-Cut Algorithms for the Symmetric CVRP	20
1.7 The Set Partitioning Approach	24
1.8 Conclusions	27
References	28
2	
METAHEURISTICS IN VEHICLE ROUTING	33
<i>Bruce L. Golden, Edward A. Wasil, James P. Kelly, I-Ming Chao</i>	
2.1 Introduction	33
2.2 Overview of Three Metaheuristics	34
2.3 Computational Experience	39
2.4 Large-Scale Vehicle Routing Problems	50
2.5 Future Directions in Vehicle Routing Research	53
References	54

3		
A	UNIFIED FRAMEWORK FOR DETERMINISTIC TIME CONSTRAINED VEHICLE ROUTING AND CREW SCHEDULING PROBLEMS	57
	<i>Guy Desaulniers, Jacques Desrosiers, Irina Ioachim, Marius M. Solomon, François Soumis, Daniel Villeneuve</i>	
3.1	Introduction	57
3.2	Relations between Time Constrained Problems	59
3.3	A Unified Formulation	68
3.4	Solution Methodology	72
3.5	Conclusion	86
	References	87
4		
THE	INVENTORY ROUTING PROBLEM	95
	<i>Ann Campbell, Lloyd Clarke, Anton Kleywegt, Martin Savelsbergh</i>	
4.1	Introduction	95
4.2	The Inventory Routing Problem	96
4.3	The Single Customer Problem	97
4.4	The Two-Customer Problem	99
4.5	Solution Approaches	102
4.6	Solution Approaches under Investigation	105
4.7	Practical Issues	110
4.8	Test Problems	112
	References	112
5		
DYNAMIC	VEHICLE ROUTING AND DISPATCHING	115
	<i>Michel Gendreau, Jean-Yves Potvin</i>	
5.1	Introduction	115
5.2	Dial-a-Ride Problems	118
5.3	Repair and Courier Services	120
5.4	Express Mail Delivery	122
5.5	Concluding Remarks	123
	References	124
6		
ON	LANGUAGES FOR DYNAMIC RESOURCE SCHEDULING PROBLEMS	127
	<i>Warren B. Powell</i>	
6.1	Introduction	127
6.2	The Language of Applications	130
6.3	A Representation Language	135
6.4	A Mathematical Language	138
6.5	A Software Language	150
6.6	A Modeling Process	155
	References	157

7		
SOLVING STOCHASTIC ROUTING PROBLEMS		159
<i>Gilbert Laporte, François V. Louveaux</i>		
7.1 Introduction		159
7.2 Formulation		160
7.3 The Integer L -Shaped Method		162
7.4 Implementation and Results		163
7.5 Conclusion		166
References		166
8		
CREW SCHEDULING IN AIR TRANSPORTATION		169
<i>Guy Desaulniers, Jacques Desrosiers, Michel Gamache, François Soumis</i>		
8.1 Introduction		169
8.2 A Variety of Crew Scheduling Problems		170
8.3 A Unified Formulation for Air Crew Scheduling Problems		172
8.4 Solution Methodology		174
8.5 Computational Results		178
8.6 Conclusion		183
References		184
9		
PATH, TREE AND CYCLE LOCATION		187
<i>Martine Labbé, Gilbert Laporte, Inmaculada Rodríguez-Martín</i>		
9.1 Introduction		187
9.2 Notations and Formulations		189
9.3 Paths with Fixed End Points (P_{o-d})		194
9.4 Paths without Fixed End Points (P)		196
9.5 Trees		196
9.6 Cycles with an Origin (C_o)		199
9.7 Cycles without a Fixed Origin (C)		200
9.8 Conclusion		202
References		202
10		
PARALLEL METAHEURISTICS		205
<i>Teodor Gabriel Crainic, Michel Toulouse</i>		
10.1 Introduction		205
10.2 Parallel Metaheuristics		206
10.3 Type 1: Low-Level Parallelization		208
10.4 Type 2: Parallelization by Domain Decomposition		214
10.5 Type 3: Multiple Search Strategies		220
10.6 Conclusions and Perspectives		233
References		235
