Preface.....xi

Authors..... xiii

Chapter 1 Introduction 1

References6

Chapter 2 Unpowered Rail Vehicle Design 9

2.1 Introduction 9

2.2 Types of Wagons..... 9

2.3 Wagon Frames 11

2.4 Suspension Elements 13

2.5 Bogies 14

2.6 Wheelsets and Bearings 15

2.7 Wagon Bodies..... 17

2.8 Brake Systems 18

2.9 Coupling20

2.9.1 Coupling Mechanisms..... 21

2.9.2 Longitudinal Damping 21

2.10 Standards 23

2.11 Acceptance Tests24

2.11.1 Roll Test.....24

2.11.2 Twist Test.....24

2.11.3 Bounce Test25

2.11.4 Critical Speed25

2.11.5 Curving Test25

2.11.6 Wind Overturning25

2.11.7 Combination of Events25

2.12 Advances in Rail Vehicle Design 26

Chapter 3 Design of Locomotives..... 27

3.1 History of Locomotives 27

3.1.1 Diesel Traction and Manufacturing of Diesel–Electric Locomotives 28

3.1.2 Electrical Traction and Electrical Locomotives 29

3.1.3 Magnetic Levitation Locomotives (Trains) 30

3.2 Traction Rolling Stock..... 30

3.2.1 Electric Locomotives..... 33

3.2.2 Electric Multiple Units 36

3.2.3 Diesel Locomotives 38

3.2.4 Diesel Multiple Units..... 42

3.2.5	Gas Turbine–Electric Locomotives.....	45
3.2.6	Hybrid Locomotives.....	45
3.2.7	Magnetic Levitation Trains	49
3.3	Common Locomotive Components and Systems.....	51
3.3.1	Classification of Main Components	51
3.3.1.1	Locomotive Frames and Bodies	51
3.3.1.2	Bogies	52
3.3.1.3	Locomotive Traction Drives	55
3.3.2	Suspension and Its Elements	57
3.3.2.1	Leaf Spring Suspension	58
3.3.2.2	Helical (or Coil) Spring Suspension	58
3.3.2.3	Air Spring Suspension	58
3.3.2.4	Hydraulic Suspension	60
3.3.2.5	Electro-Mechanical Suspension	61
3.3.2.6	Dampers.....	61
3.3.2.7	Combinations of Several Suspension Elements	62
3.3.2.8	Active Suspension.....	62
3.3.3	Connection between a Locomotive Frame and Bogies	64
3.3.3.1	Centre Pivots.....	64
3.3.3.2	Side Bearers	66
3.3.3.3	Links and Linkages	67
3.3.3.4	Traction Rods.....	67
3.3.4	Brake Systems and Their Devices.....	67
3.3.4.1	Basic Components of Brake Systems.....	68
3.3.4.2	Dynamic Brake Systems.....	69
3.3.4.3	Electromagnetic Brakes.....	69
3.3.4.4	Rail Brakes	70
3.3.5	Classification of Locomotive Electric Traction.....	70
3.3.5.1	DC Traction	71
3.3.5.2	AC Traction.....	71
3.4	Locomotive Design: New Perspectives	72

Chapter 4	General Modelling Techniques	79
4.1	Dynamics of Bodies	79
4.1.1	Rail Vehicle	79
4.1.2	Train	82
4.2	Wheel–Rail Contact Patch	83
4.3	Brake Modelling.....	84
4.3.1	Pneumatic Brakes.....	85
4.3.2	Electronically Controlled Pneumatic Brakes	87
4.3.3	Wheel Brakes	87
4.3.4	Disc Brakes	88

4.4	Aerodynamics.....	88
4.5	Introduction to FEM.....	88
4.6	FEM of Rail Vehicle Structure.....	89
4.7	FEM of Rail.....	90
4.8	Rail Track, Sub-Structure and Bridge Modelling	91
4.9	Pantograph Modelling	93
4.10	Modelling Techniques	93
	4.10.1 Dynamic Model Elements.....	94
	4.10.2 Numerical Integrators	95
	References	95
Chapter 5	Multibody Dynamics.....	101
5.1	Introduction to Multibody Dynamics	101
5.2	Kinematics.....	102
5.3	Dynamics.....	104
	5.3.1 Newton–Euler Equations	104
	5.3.2 D’Alembert’s Principle and Generalised Forces	104
	5.3.3 Lagrange’s Equation.....	105
	5.3.4 Dynamic Equations.....	106
5.4	Elements	108
	5.4.1 Rail Vehicle Modelling Axis System.....	108
	5.4.2 Inertia Elements	109
	5.4.3 Suspension Elements	109
	5.4.4 Constraint Elements	112
5.5	Rigid Body versus Flexible Body	112
5.6	Multibody Dynamics Software for Rail Vehicle Dynamics.....	113
	5.6.1 NUCARS.....	114
	5.6.2 GENSYS.....	116
	5.6.3 VAMPIRE	118
	5.6.4 ADAMS/Rail (Now VI-Rail).....	120
	5.6.5 SIMPACK.....	121
	5.6.6 Universal Mechanism.....	122
	5.6.7 In-House Packages	123
	5.6.8 Benchmarks and Comparisons.....	126
	References	126
Chapter 6	Longitudinal Train Dynamics.....	129
6.1	Introduction to Longitudinal Train Dynamics	129
6.2	Modelling Longitudinal Train Dynamics	130
	6.2.1 Train Models	130
	6.2.2 Modelling Vehicle Inputs	133
	6.2.2.1 Locomotive Traction and Dynamic Braking	134
	6.2.2.2 Propulsion Resistance.....	138

6.2.2.3	Curving Resistance.....	140
6.2.2.4	Gravitational Components.....	144
6.2.2.5	Pneumatic Brake Models.....	144
6.2.3	Wagon Connection Models	150
6.2.3.1	Conventional Auto-Couplers and Draft Gear Packages.....	153
6.2.3.2	Slackless Packages.....	160
6.2.3.3	Drawbars.....	160
6.2.4	Train Configurations	161
6.2.5	Train Dynamics Model Development and Simulation	162
6.3	Interaction of Longitudinal Train and Lateral/Vertical Wagon Dynamics	170
6.3.1	Wheel Unloading, Wheel Climb and Rollover on Curves Due to Lateral Components of Coupler Forces.....	175
6.3.2	Wagon Body and Bogie Pitch Due to Coupler Impact Forces.....	180
6.3.3	Wagon Liftoff Due to Vertical Components of Coupler Forces.....	186
6.4	Longitudinal Comfort.....	188
6.5	Energy Considerations.....	191
6.6	Train Control, Management and Driving Practices	192
6.7	Design Considerations.....	195
	References	196

Chapter 7	Rail Vehicle–Track Interaction Dynamics	199
7.1	Introduction	199
7.2	Modelling of Rail Vehicles.....	199
7.3	Modelling of Tracks	201
7.4	Modelling of Wheel–Rail Contact	204
7.5	Example of a Three-Dimensional Rail Wagon–Track System Dynamics Model.....	210
7.5.1	Wagon Subsystem.....	210
7.5.2	Track Subsystem.....	212
7.6	Numerical Integration Methods	216
7.6.1	Improved Fourth-Order Runge–Kutta Method.....	217
7.6.2	Modified Newmark- β Method.....	218
7.6.3	Comparison of the Two Solution Schemes.....	220
7.7	Vehicle Dynamic Performances.....	224
7.7.1	Derailments	224
7.7.1.1	Nadal Formula	225
7.7.1.2	Derailment Simulation Due to Train Collision.....	226
7.7.2	Rail Ride Comfort.....	226

7.7.3	Lateral Instability (Hunting)	231
7.7.4	Curving Performance	236
7.8	Vehicle–Track Interactions	238
7.8.1	Initiation and Growth of RCF Cracks	238
7.8.2	Wear of the Rail and Wheel	240
7.8.3	Shakedown Diagram	242
7.9	Vehicle Acceptance Simulations	242
	References	243
Chapter 8	Co-Simulation and Its Application.....	249
8.1	Introduction to Co-Simulation Process	249
8.2	Co-Simulation between Multibody Software Packages and MATLAB®/Simulink®	250
8.2.1	Simpack and Simulink®	251
8.2.2	VI-Rail (ADAMS/Rail) and Simulink	253
8.2.3	Vampire and Simulink	254
8.2.4	Universal Mechanism and Simulink	254
8.3	Design of the Co-Simulation Interface.....	255
8.3.1	Description of the Co-Simulation Interface in GENSYS.....	256
8.3.2	Design of the Co-Simulation Interface in Simulink	257
8.3.3	Example of Co-Simulation Implementation between Gensys and Simulink	269
	References	275
Chapter 9	Advanced Simulation Methodologies	277
9.1	Complex Tasks and Their Solutions	277
9.2	Scenario A: On-Line Simulation and Existing Pre-Calculated Data	278
9.2.1	Step 1: Definition of Simulation Methodology	278
9.2.2	Step 2: Simulations.....	279
9.2.2.1	Stage 1: Longitudinal Train Dynamics Simulation	279
9.2.2.2	Stage 2: Creating and Verifying a Multibody Wagon Model	280
9.2.2.3	Stage 3: Wagon Dynamics Simulation	286
9.3	Scenario B: On-Line Simulation and Experimental Data	286
9.4	Scenario C: Real-Time Simulation	300
	References	308
Chapter 10	Conclusion	311
Index.....		313
