|                                                                      |               |
|----------------------------------------------------------------------|---------------|
| <b>Chapter 1 Introduction</b>                                        | <b>1</b>      |
| 1.1 Finite element technique .....                                   | 1             |
| 1.2 Shape functions and element stiffness matrix .....               | 7             |
| 1.3 Brief historical background .....                                | 15            |
| 1.4 Basic relationships in engineering problems .....                | 16            |
| 1.5 Modified variational principles .....                            | 21            |
| 1.6 The concept of T-complete solution .....                         | 23            |
| 1.7 Comparison of T-elements with conventional finite elements ..... | 24            |
| 1.8 Comparison of T-elements with boundary elements .....            | 35            |
| References .....                                                     | 38            |
| <br><b>Chapter 2 Potential Problems</b>                              | <br><b>43</b> |
| 2.1 Introduction .....                                               | 43            |
| 2.2 Statement of the problem .....                                   | 44            |
| 2.3 T-complete functions .....                                       | 45            |
| 2.4 Assumed fields .....                                             | 46            |
| 2.5 Generation of element matrix equation .....                      | 49            |
| 2.6 Rank condition .....                                             | 53            |
| 2.7 Special purpose functions .....                                  | 54            |
| 2.8 Sensitivity to mesh distortion .....                             | 57            |
| 2.9 Orthotropic case .....                                           | 57            |
| 2.10 The Helmholtz equation .....                                    | 60            |
| 2.11 HT-element with boundary 'traction' frame .....                 | 62            |
| 2.12 Frameless T-elements .....                                      | 67            |
| References .....                                                     | 71            |
| <br><b>Chapter 3 Linear Elastostatics</b>                            | <br><b>73</b> |
| 3.1 Introduction .....                                               | 73            |
| 3.2 Linear theory of elasticity .....                                | 73            |
| 3.3 Assumed fields in plane elasticity .....                         | 79            |
| 3.4 T-complete functions .....                                       | 81            |
| 3.5 Variational formulations .....                                   | 84            |
| 3.6 Element stiffness equation .....                                 | 86            |
| 3.7 Special-purpose elements .....                                   | 88            |

|      |                                    |     |
|------|------------------------------------|-----|
| 3.8  | <i>p</i> -extension approach ..... | 96  |
| 3.9  | Three-dimensional elasticity ..... | 97  |
| 3.10 | Numerical examples .....           | 98  |
|      | References .....                   | 101 |

## **Chapter 4 Thin Plates 103**

|      |                                                        |     |
|------|--------------------------------------------------------|-----|
| 4.1  | Introduction .....                                     | 103 |
| 4.2  | Thin plate theory .....                                | 103 |
| 4.3  | Assumed field .....                                    | 107 |
| 4.4  | T-complete functions and particular solutions .....    | 109 |
| 4.5  | Variational formulations for plate bending .....       | 111 |
| 4.6  | Generation of element stiffness matrix .....           | 113 |
| 4.7  | <i>p</i> -method elements .....                        | 115 |
| 4.8  | Special purpose functions .....                        | 116 |
| 4.9  | Extension to thin plates on elastic foundation .....   | 119 |
| 4.10 | Two alternative plate bending <i>p</i> -elements ..... | 122 |
| 4.11 | Numerical examples and assessment .....                | 126 |
|      | References .....                                       | 136 |

## **Chapter 5 Thick Plates 139**

|     |                                                            |     |
|-----|------------------------------------------------------------|-----|
| 5.1 | Introduction .....                                         | 139 |
| 5.2 | Basic equations for Reissner-Mindlin plate theory .....    | 140 |
| 5.3 | Assumed fields and particular solution .....               | 141 |
| 5.4 | Variational formulation for HT thick plate elements .....  | 149 |
| 5.5 | Implementation of the new family of HT elements .....      | 151 |
| 5.6 | A 12 DOF quadrilateral element free of shear locking ..... | 153 |
| 5.7 | Extension to thick plates on elastic foundation .....      | 157 |
| 5.8 | Sensitivity to mesh distortion .....                       | 160 |
| 5.9 | Numerical assessment .....                                 | 160 |
|     | References .....                                           | 170 |

## **Chapter 6 Transient Heat Conduction 173**

|     |                                                     |     |
|-----|-----------------------------------------------------|-----|
| 6.1 | Introduction .....                                  | 173 |
| 6.2 | Elements of heat conduction .....                   | 174 |
| 6.3 | Time step formula .....                             | 174 |
| 6.4 | Element matrix formulations .....                   | 175 |
| 6.5 | T-complete functions and particular solutions ..... | 179 |
| 6.6 | Numerical examples .....                            | 179 |
|     | References .....                                    | 184 |

## **Chapter 7 Geometrically Nonlinear Analysis of Plate Bending Problems 187**

|     |                                                       |     |
|-----|-------------------------------------------------------|-----|
| 7.1 | Introduction .....                                    | 187 |
| 7.2 | Basic equations of nonlinear thin plate bending ..... | 187 |
| 7.3 | Assumed fields and Trefftz functions .....            | 191 |

|      |                                                                    |     |
|------|--------------------------------------------------------------------|-----|
| 7.4  | Particular solutions .....                                         | 194 |
| 7.5  | Modified variational principle .....                               | 195 |
| 7.6  | Element matrix .....                                               | 197 |
| 7.7  | Iterative scheme .....                                             | 199 |
| 7.8  | Extension to post-buckling thin plates on elastic foundation ..... | 200 |
| 7.9  | Geometrically nonlinear analysis of thick plates .....             | 202 |
| 7.10 | Numerical examples .....                                           | 210 |
|      | References .....                                                   | 216 |

## **Chapter 8 Elastoplasticity 219**

|     |                                                              |     |
|-----|--------------------------------------------------------------|-----|
| 8.1 | Introduction .....                                           | 219 |
| 8.2 | Time discretization .....                                    | 219 |
| 8.3 | Basic relations .....                                        | 220 |
| 8.4 | Assumed fields .....                                         | 223 |
| 8.5 | Constraints on the approximation functions .....             | 224 |
| 8.6 | Finite element equilibrium and compatibility equations ..... | 225 |
| 8.7 | Finite element equations .....                               | 226 |
| 8.8 | Finite element governing system .....                        | 229 |
|     | References .....                                             | 230 |

## **Chapter 9 Dynamics of Plate Bending Problems 231**

|     |                                 |     |
|-----|---------------------------------|-----|
| 9.1 | Introduction .....              | 231 |
| 9.2 | Basic equations .....           | 231 |
| 9.3 | Time-stepping formulation ..... | 232 |
| 9.4 | Numerical examples .....        | 235 |
|     | References .....                | 238 |

## **Chapter 10 Trefftz Boundary Element Method 239**

|      |                               |     |
|------|-------------------------------|-----|
| 10.1 | Introduction .....            | 239 |
| 10.2 | Potential problems .....      | 239 |
| 10.3 | Plane elasticity .....        | 250 |
| 10.4 | Thin plate bending .....      | 256 |
| 10.5 | Moderately thick plates ..... | 260 |
|      | References .....              | 265 |

## **Appendix A Numerical Integration 267**

## **Appendix B Matrix Algebra and Calculus 271**
