<i>Preface and Roadmap</i>	<i>page vii</i>
<i>General References</i>	<i>x</i>
1 An Introduction to Turbulence	1
1.1 The Physical Nature of Turbulence	10
1.2 Some Practical Consequences: Energy Loss, Drag, and Dispersion	16
1.3 Remarks on Mathematical Chaos	23
1.4 Miscellany	27
1.5 Conclusions	29
References	29
2 Statistical Tools	31
2.1 Probabilities and Averaging	32
2.2 Statistical Moments and Correlations	39
2.3 Gaussian Statistics and the Central Limit Theorem	46
2.4 Turbulent Mean Flow and Fluctuations	51
2.5 Steadiness, Homogeneity, Isotropy, and Other Statistical Symmetries	54
2.6 Conclusions	56
References	56
3 Space and Time Scales of Turbulence	57
3.1 Velocity Correlations and Spatial Scales	61
3.2 Temporal Correlations and Time Scales	68
3.3 Conclusions	72
Reference	72
4 Basic Theory and Illustrative Examples	73
4.1 The Mean Flow	76
4.2 Equations of the Second-Order Moments: Turbulence Energetics	84
4.3 The Effects of Pressure	92
4.4 The Vorticity	97
4.5 Some Examples of Simple Turbulent Flows	105
4.6 Conclusions	133
References	136

5	Classical Models of Jets, Wakes, and Boundary Layers	138
5.1	Laminar Boundary Layers	147
5.2	The Turbulent-“Boundary-Layer” Approximation for Jets and Wakes	156
5.3	Jets	164
5.4	Wakes	178
5.5	Turbulent Boundary Layers	186
5.6	Conclusions	234
	Appendix: A Higher-Order Boundary-Layer Momentum Balance Equation	235
	References	237
6	Spectral Analysis of Homogeneous Turbulence	239
6.1	Direct Fourier Transforms	245
6.2	Transformation of the Navier–Stokes Equations	251
6.3	Spectral Equations via Correlations in Physical Space	261
6.4	Consequences of Isotropy	263
6.5	One-Dimensional Transforms, Time Spectra, and Some Experimental Results	272
6.6	Conclusions	279
	Appendix: Miscellaneous Expressions for the Mean Dissipation in Homogeneous, Isotropic Turbulence	279
	References	282
7	Kolmogorov’s and Other Theories Based on Spectral Analysis	283
7.1	Properties of the Energy Spectrum and Velocity Correlations	283
7.2	Spectral Dynamics and the Final Phase of Passive Decay	289
7.3	Kolmogorov’s Theory of the Small Scales	291
7.4	Self-Similar Evolution of the Large Scales of Homogeneous, Isotropic Turbulence	300
7.5	Beyond Kolmogorov’s Original Theory	305
7.6	Conclusions	323
	Appendix: Kolmogorov’s Four-Fifths Law	324
	References	325
8	Numerical Simulation of Turbulent Flows	327
8.1	Direct Numerical Simulation (DNS)	327
8.2	Large-Eddy Simulation (LES)	340
8.3	One-Point Statistical Modeling	353
8.4	Conclusions	366
	References	367
	<i>Index</i>	369
