Contents

Preface *page* ix
List of Contributors xi

1 **Fundamentals and Challenges** 1
1.1 Aims and Coverage 1
1.2 Background 3
1.3 Governing Equations 6
1.3.1 Chemical Reaction Rate 8
1.3.2 Mixture Fraction 9
1.3.3 Spray Combustion 10
1.4 Levels of Simulation 11
1.4.1 DNS 11
1.4.2 RANS 11
1.4.3 LES 12
1.5 Equations of Turbulent Flow 13
1.6 Combustion Regimes 14
1.7 Modelling Strategies 16
1.7.1 Turbulent Transport 17
1.7.2 Reaction-Rate Closures 20
1.7.3 Models for LES 27
1.8 Data for Model Validation 31
REFERENCES 33

2 **Modelling Methods** 41
2.1 Laminar Flamelets and the Bray, Moss, and Libby Model 41
2.1.1 The BML Model 42
2.1.2 Application to Stagnating Flows 48
2.1.3 Gradient and Counter-Gradient Scalar Transport 50
2.1.4 Laminar Flamelets 52
2.1.5 A Simple Laminar Flamelet Model 54
2.1.6 Conclusions 60

2.2 Flame Surface Density and the G Equation 60
2.2.1 Flame Surface Density 61
2.2.2 The G Equation for Laminar and Corrugated Turbulent Flames 64
2.2.3 Detailed Chemistry Modelling with FSD 68
2.2.4 FSD as a PDF Ingredient 71
2.2.5 Conclusion 74
2.3 Scalar-Dissipation-Rate Approach 74
2.3.1 Interlinks among SDR, FSD, and Mean Reaction Rate 76
2.3.2 Transport Equation for the SDR 77
2.3.3 A Situation of Reference – Non-Reactive Scalars 78
2.3.4 SDR in Premixed Flames and Its Modelling 81
2.3.5 Algebraic Models 97
2.3.6 Predictions of Measurable Quantities 100
2.3.7 LES Modelling for the SDR Approach 101
2.3.8 Final Remarks 102
2.4 Transported Probability Density Function Methods for Premixed Turbulent Flames 102
2.4.1 Alternative PDF Transport Equations 105
2.4.2 Closures for the Velocity Field 107
2.4.3 Closures for the Scalar Dissipation Rate 108
2.4.4 Reaction and Diffusion Terms 109
2.4.5 Solution Methods 110
2.4.6 Freely Propagating Premixed Turbulent Flames 111
2.4.7 The Impact of Molecular-Mixing Terms 113
2.4.8 Closure of Pressure Terms 114
2.4.9 Premixed Flames at High Reynolds Numbers 121
2.4.10 Partially Premixed Flames 124
2.4.11 Scalar Transport at High Reynolds Numbers 126
2.4.12 Conclusions 130
Appendix 2.A 132
Appendix 2.B 133
Appendix 2.C 134
Appendix 2.D 135
REFERENCES 135

3 **Combustion Instabilities** 151
3.1 Instabilities in Flames 151
3.1.1 Flame Instabilities 152
3.1.2 Turbulent Burning, Extinctions, Relights, and Acoustic Waves 166
3.1.3 Auto-Ignitive Burning 168
3.2 Control Strategies for Combustion Instabilities 173
3.2.1 Energy and Combustion Oscillations 174
3.2.2 Passive Control 176
3.2.3 Tuned Passive Control 187
3.2.4 Active Control 189

3.3 Simulation of Thermoacoustic Instability 202
3.3.1 Basic Equations and Levels of Description 202
3.3.2 LES of Compressible Reacting Flows 206
3.3.3 3D Helmholtz Solver 215
3.3.4 Upstream–Downstream Acoustic Conditions 219
3.3.5 Application to an Annular Combustor 221
3.3.6 Conclusions 229
REFERENCES 229

4 **Lean Flames in Practice** 244
4.1 Application of Lean Flames in Internal Combustion Engines 244
4.1.1 Legislation for Fuel Economy and for Emissions 245
4.1.2 Lean-Burn Combustion Concepts for IC Engines 256
4.1.3 Role of Experiments for Lean-Burn Combustion in IC Engines 304
4.1.4 Concluding Remarks 307
4.2 Application of Lean Flames in Aero Gas Turbines 309
4.2.1 Background to the Design of Current Aero Gas Turbine Combustors 312
4.2.2 Scoping the Low-Emissions Combustor Design Problem 313
4.2.3 Emissions Requirements 314
4.2.4 Engine Design Trend and Effect of Engine Cycle on Emissions 317
4.2.5 History of Emissions Research to C.E. 2000 318
4.2.6 Operability 321
4.2.7 Performance Compromise after Concept Demonstration 323
4.2.8 Lean-Burn Options 324
4.2.9 Conclusions 331
4.3 Application of Lean Flames in Stationary Gas Turbines 335
4.3.1 Common Combustor Configurations 336
4.3.2 Fuels 338
4.3.3 Water Injection 339
4.3.4 Emissions Regulations 340
4.3.5 Available NO_x Control Technologies 342
4.3.6 Lean Blowoff 345
4.3.7 Combustion Instability 345
4.3.8 Flashback 348
4.3.9 Auto-Ignition 348
4.3.10 External Aerodynamics 349
4.3.11 Combustion Research for Industrial Gas Turbines 349
4.3.12 Future Trends and Research Emphasis 350
REFERENCES 351

5 **Future Directions** 365
5.1 Utilization of Hot Burnt Gas for Better Control of Combustion and Emissions 365
5.1.1 Axially Staged Lean-Mixture Injection 367

5.1.2 Application of the Concept to Gas Turbine Combustors 374
5.1.3 Numerical Simulation towards Design Optimization 375
5.2 Future Directions and Applications of Lean Premixed Combustion 378
5.2.1 LPP Combustors 378
5.2.2 Reliable Models that Can Predict Lift-Off and Blowout Limits of Flames in Co-Flows or Cross-Flows 383
5.2.3 New Technology in Measurement Techniques 386
5.2.4 Unresolved Fundamental Issues 390
5.2.5 Summary 395
5.3 Future Directions in Modelling 396
5.3.1 Modelling Requirements 396
5.3.2 Assessment of Models 398
5.3.3 Future Directions 400
REFERENCES 401

Nomenclature 407
