CHAPTER 1: MATHEMATICAL PRELIMINARIES..... 1

1.1	Introduction	1
1.2	Binomial Theorem	2
1.3	Differentiation	5
1.3.1	General Formulas.....	6
1.3.2	Chain Rule	8
1.3.3	Leibniz Theorem on n-th Order Differentiation.....	9
1.3.4	Leibniz Rule of Differentiation for Integral.....	10
1.3.5	Partial Derivative	11
1.3.6	Commutative Rule for Partial Derivatives	13
1.4	Integration.....	14
1.4.1	Integration by Parts.....	16
1.4.2	General Rules of Integration.....	16
1.4.3	Some Transformation Rules	17
1.4.4	Mean Value Theorem	18
1.4.5	Improper Integral.....	18
1.4.6	Laplace/Gauss Integral	18
1.5	Jacobian	20
1.6	Complex Variables and Euler's Formula.....	22
1.7	Analytic Function	24
1.7.1	Cauchy-Riemann Relations.....	24
1.7.2	Liouville Theorem	26
1.7.3	Cauchy-Goursat Theorem.....	26
1.7.4	Cauchy Integral Formula	28
1.7.5	Residue Theorem.....	30
1.7.6	Branch Point and Branch Cut	33
1.7.7	Titchmarsh's Contour Integral.....	34
1.8	Frullani-Cauchy Integral.....	36
1.9	Ramanujan Master Theorem.....	36
1.10	Ramanujan Integral Theorem	37
1.11	Circular Functions	38
1.12	Hyperbolic Functions.....	39
1.13	Series Expansions	43
1.13.1	Darboux's Formula.....	43
1.13.2	Taylor's Series Expansion	45
1.13.3	Maclaurin's Series Expansion.....	46
1.13.4	Laurent's Series Expansion.....	47

1.13.5	Lagrange's Theorem	47
1.13.6	Mittag-Leffler's Expansion	48
1.13.7	Borel's Theorem	50
1.14	Functions as Infinite Product	51
1.15	Vector Calculus	53
1.15.1	Gradient	53
1.15.2	Divergence	55
1.15.3	Curl	55
1.15.4	Physical Meaning of Gradient, Divergence and Curl	56
1.15.5	Vector Identities	58
1.16	Helmholtz Representation Theorem	59
1.17	Gauss Divergence Theorem	60
1.18	Kelvin-Stokes Theorem	61
1.19	Vectors and Tensors	62
1.20	ϵ - δ Identity	66
1.21	Tensor Analysis in Cartesian Coordinates	67
1.22	Tensor Analysis in Cylindrical Coordinates	68
1.23	Tensor Analysis in Spherical Coordinates	71
1.24	Summary and Further Reading	73
1.25	Problems	74

CHAPTER 2: INTRODUCTION TO DIFFERENTIAL EQUATIONS 83

2.1	Introduction	83
2.2	Total and Partial Derivatives	84
2.3	Order of Differential Equations	84
2.4	Nonlinear versus Linear	84
2.5	PDE versus ODE	86
2.6	Nonhomogeneous versus Homogeneous	87
2.7	Some Significant Nonlinear PDEs	89
2.8	System of Differential Equations	98
2.8.1	Maxwell Equations	98
2.8.2	Navier-Stokes Equation	100
2.8.3	Elastodynamics	106
2.8.4	Three-Dimensional Elasticity	108
2.9	Summary and Further Reading	109
2.10	Problems	110

CHAPTER 3: ORDINARY DIFFERENTIAL EQUATIONS 113

3.1	Introduction	113
3.2	First Order ODE	114
3.2.1	Separable ODE	114
3.2.2	Homogeneous Equation	117

3.2.3	Rational Polynomials	119
3.2.4	Integrable Condition	122
3.2.5	Integrating Factor	125
3.2.5.1	Case 1: $Mx+Ny=0$	125
3.2.5.2	Case 2: $Mx-Ny=0$	126
3.2.5.3	Case 3: $Mx+Ny\neq 0$ & $Mx-Ny\neq 0$	126
3.2.5.4	Stokes Method for Homogeneous Equation	126
3.2.5.5	Differential Equation for Integrating Factor	127
3.2.5.6	Integrating Factors by Inspection	130
3.2.6	Standard Linearized Form	131
3.2.7	Bernoulli Equation.....	132
3.2.8	Riccati Equation	134
3.2.9	Jacobi Method	139
3.2.10	Integration by Differentiation	140
3.2.11	Clairaut Equation.....	143
3.2.12	Singular Solution	144
3.2.13	Lagrange Equation.....	145
3.2.14	Factorization of Nonlinear Form	145
3.2.15	Solution by Taylor Series Expansion.....	147
3.3	Second Order ODE.....	147
3.3.1	ODE with Constant Coefficients.....	148
3.3.2	Nonhomogeneous ODE	151
3.3.3	Undetermined Coefficient.....	152
3.3.4	Variation of Parameters	158
3.3.5	Operator Factors	160
3.3.6	Reduction to First Order	161
3.4	Second Order ODE with Nonconstant Coefficients.....	163
3.4.1	Euler Equation	164
3.4.2	Transformation to Constant Coefficient.....	164
3.4.3	Laplace Type	166
3.4.4	Solution as Confluent Hypergeometric Functions	171
3.4.5	Liouville Problem	174
3.4.6	Mainardi Approach for Liouville Problem	176
3.4.7	Liouville Transformation.....	176
3.4.8	Transformation and Invariants of ODE	178
3.5	Higher Order ODE	181
3.5.1	Euler Equation of Order n	184
3.5.2	Adjoint ODE.....	186
3.5.3	Sarrus Method	190
3.5.4	Rule of Transformation.....	191
3.5.5	Homogeneous Equation.....	194
3.5.6	Undetermined Coefficient for Nonhomogeneous ODE	197
3.5.7	Variation of Parameters	199
3.5.8	Reduction to Lower Order	202
3.5.9	Exact Condition.....	203

3.5.10	Factorization of ODE	204
3.5.11	Symbolic Method for Nonhomogeneous ODE	208
3.5.12	Removal of the Second Highest Derivative	214
3.5.13	Particular Forms	216
3.5.14	Autonomous n -th Order ODE	217
3.6	Summary and Further Reading	218
3.7	Problems	218

CHAPTER 4: SERIES SOLUTIONS OF SECOND ORDER ODES..... 227

4.1	Introduction	227
4.2	Gamma Function.....	227
4.2.1	Euler's Integral Definition	228
4.2.2	Euler's Factorial Form	230
4.2.3	Weierstrass's Product Definition	231
4.2.4	Reflection Formula	233
4.2.5	Recurrence Formula.....	236
4.2.6	Legendre Duplication Formula	236
4.2.7	Digamma or Psi Function	239
4.2.8	Stirling Formula.....	242
4.2.9	Important Formulas	245
4.3	Hadamard Factorial Function	246
4.3.1	Recurrence Formula.....	251
4.3.2	Reflection Formula	251
4.4	Harmonic Equation	253
4.5	Fuchsian ODE with Regular Singular Points	255
4.6	Bessel Equation	260
4.6.1	Frobenius Series for Non-Integer Order	260
4.6.2	Bessel Function of Second Kind for Integer Order.....	262
4.6.3	Circular Functions and Bessel Functions of Half Order	268
4.6.4	Modified Bessel Function	270
4.6.5	Helmholtz Equation and Integral Representation	275
4.7	Lommel Differential Equation	281
4.8	Hankel Function.....	281
4.9	Kelvin Functions	283
4.10	Legendre Equation.....	288
4.10.1	Series Solution	290
4.10.2	Rodrigues Formula	295
4.11	Associated Legendre Equation	295
4.12	Hypergeometric Function	297
4.12.1	Frobenius Series Solution	297
4.12.2	Confluent Hypergeometric Function.....	299
4.12.3	Kummer's Classification of Hypergeometric Series	300
4.12.4	Hypergeometric Series versus Other Functions	303
4.13	Generalized Hypergeometric Equation	305

4.14	Movable Singularities and Painleve Equations.....	307
4.15	Summary and Further Reading	309
4.16	Problems	310

CHAPTER 5: SYSTEM OF FIRST ORDER DIFFERENTIAL EQUATIONS

321

5.1	Introduction	321
5.2	Reduction of n-th Order ODE to System of Equations	323
5.3	Analytic Solution by Elimination.....	325
5.4	Determinacy of System of Equations	332
5.5	Review on Matrix	333
5.5.1	Hermitian Matrix	335
5.5.2	Eigenvalue Problem.....	336
5.5.3	Differentiation of Matrix	337
5.6	Homogeneous System with Constant Coefficients.....	337
5.6.1	Case 1: Distinct Eigenvalues	340
5.6.2	Case 2: Repeated Eigenvalues	341
5.6.3	Case 3: Complex Eigenvalues	342
5.7	Nonhomogeneous System with Constant Coefficient	349
5.7.1	Undetermined Coefficients	350
5.7.2	Variation of Parameters	353
5.8	System of Nonlinear ODE	356
5.9	Stability of Autonomous System	356
5.10	Summary and Further Reading	360
5.11	Problems	360

CHAPTER 6: FIRST ORDER PARTIAL DIFFERENTIAL EQUATIONS

(PDES) 367

6.1	Introduction	367
6.2	First Order PDE	367
6.3	Hyperbolic Equation	368
6.3.1	Transport with Decay	369
6.3.2	Non-Uniform Transport.....	370
6.3.3	Nonlinear Transport and Shock Waves	370
6.4	Airy's Method for Hyperbolic Equation	372
6.5	Geometric Interpretation of Linear PDE.....	374
6.6	Cauchy-Kovalevskaya Theorem	376
6.7	Lagrange's Method for Linear First Order PDE	377
6.8	Lagrange Multiplier	379
6.9	Pfaffian Equations	382
6.10	Exact Equations	382
6.11	Integrability of Pfaffian	383
6.12	Lagrange-Charpit Method for Nonlinear PDE	388

6.12.1	Type I (only p and q)	393
6.12.2	Type II (only z , p and q)	394
6.12.3	Type III (Separable)	395
6.12.4	Type IV (Clairaut Type)	397
6.12.5	Singular Solution	397
6.13	Geometric Interpretation of Nonlinear PDE	399
6.14	Jacobi's Method	400
6.15	Hodograph Transformation	405
6.16	Summary and Further Reading	405
6.17	Problems	406

CHAPTER 7: HIGHER ORDER PARTIAL DIFFERENTIAL EQUATIONS (PDES) 411

7.1	Introduction	411
7.2	Classification of Second Order PDE	412
7.2.1	Physical Meaning of Characteristics	414
7.2.2	Sommerfeld's Interpretation of Characteristics	415
7.2.3	Hyperbolic PDE	419
7.2.4	Parabolic PDE	421
7.2.5	Elliptic PDE	422
7.3	Canonical Forms of Second Order PDE	425
7.3.1	Hyperbolic PDE	425
7.3.2	Parabolic PDE	426
7.3.3	Elliptic PDE	427
7.4	Solutions of Canonical Forms of Second Order PDE	428
7.4.1	Nonhomogeneous Klein-Gordon Equation	428
7.4.2	Nonhomogeneous Diffusion Equation	431
7.4.3	Nonhomogeneous Helmholtz Equation	433
7.5	Adjoint of Second Order PDE	439
7.6	Self-Adjoint Condition for System of Second Order PDE	441
7.7	Mixed Type PDE	445
7.7.1	Two-Dimensional Steady Gas Flows	445
7.7.2	Hodograph Transformation	446
7.7.3	Chaplygin's Equation	447
7.7.4	Tricomi's Equation	449
7.7.5	Solution of Tricomi's Equation	451
7.8	Riemann's Integral of Hyperbolic DE	454
7.9	Biharmonic Equation	457
7.9.1	Plane Elastic Stress Analysis for Solids	458
7.9.2	Three-Dimensional Elastic Stress Analysis for Solids	459
7.9.3	Bending of Thin Plates	460
7.9.4	Two-Dimensional Viscous Flow with Low Reynolds Number	460
7.9.5	Uniqueness of the Solution of Biharmonic Equation	462
7.9.6	Biharmonic Functions and Almansi Theorems	463

7.9.7	Solution of Circular Domain.....	465
7.10	Second Order PDE with Non-Constant Coefficients	468
7.10.1	Type I (Direct Integration).....	468
7.10.2	Type II (ODE of p or q).....	469
7.10.3	Type III (First Order PDE)	469
7.10.4	Type IV (Second Order ODE).....	469
7.11	Monge and Monge-Ampere Methods	470
7.11.1	Some Examples	471
7.11.2	Generalized Form	472
7.11.3	Monge's Method.....	473
7.11.4	Monge-Ampere Method	476
7.12	Factorization of PDE with Constant Coefficients	480
7.13	Particular Solution by Symbolic Method.....	482
7.14	Summary and Further Reading	486
7.15	Problems	487

CHAPTER 8: GREEN'S FUNCTION METHOD 493

8.1	Introduction	493
8.2	Potentials	494
8.3	Green's Functions for Laplace Equation	494
8.4	Green's Identities.....	498
8.5	Boundary Integral for Harmonic Functions	502
8.6	Green's Function Method for Laplace Equation.....	505
8.7	General Green's Theorem for Second Order PDE	506
8.8	Green's Theorem for Biharmonic Operator.....	508
8.9	Integral Equation for Biharmonic Problems	509
8.10	Dirac Delta Function.....	513
8.11	Distribution Theory	514
8.11.1	Properties of Dirac Delta Function	514
8.11.2	Delta Function as Sequence of Functions	518
8.12	Green's Function Method for PDE	525
8.13	Some Results on Green's Functions	530
8.13.1	Helmholtz Equation	530
8.13.2	Diffusion Equation	530
8.13.3	Wave Equation.....	531
8.13.4	Biharmonic Equation.....	531
8.13.5	Multi-Harmonic Equation.....	532
8.14	Summary and Further Reading	535
8.15	Problems	536

CHAPTER 9: WAVE, DIFFUSION AND POTENTIAL EQUATIONS..... 539

9.1	Introduction	539
9.2	Wave Equations.....	540

9.2.1	D'Alembert Solution for 1-D Waves.....	540
9.2.2	Domain of Dependence and Influence Zone.....	546
9.2.3	Two-Dimensional Waves.....	551
9.2.4	Three-Dimensional Waves	553
9.2.5	Three-Dimensional Symmetric Waves	554
9.2.6	Poisson or Kirchhoff Formula for Three-Dimensional Waves	555
9.2.7	Hadamard's Method of Descent for 2-D Wave	557
9.2.8	Huygen Principle	559
9.2.9	n-Dimensional Waves.....	560
9.2.10	Wavefront Condition	563
9.3	Nonhomogeneous Wave Equation.....	564
9.4	Helmholtz Equation	567
9.5	Telegraph Equation.....	568
9.5.1	Formulation	569
9.5.2	Solution.....	570
9.6	Diffusion Equation.....	572
9.6.1	Heat Conduction.....	572
9.6.2	Terzaghi 1-D Consolidation Theory	575
9.6.3	Living Underground	577
9.7	Laplace Equation	579
9.7.1	Dirichlet Problem	582
9.7.2	Neumann Problem	583
9.7.3	Robin Problem.....	583
9.7.4	Spherical Coordinate	584
9.7.5	Cylindrical Coordinate.....	585
9.7.6	Poisson Integral	587
9.7.7	Extremal Principle	591
9.7.8	Properties of Harmonic Functions	591
9.8	Physical Implication of Laplace Equation (Saddle).....	593
9.9	Laplace Equation in Rectangular Domain	594
9.9.1	Prescribed Function along y-axis.....	594
9.9.2	Prescribed Function along x-axis.....	597
9.9.3	Prescribed Functions on All Four Sides.....	599
9.10	Summary and Further Reading	601
9.11	Problems	602

CHAPTER 10: EIGENFUNCTION EXPANSIONS..... 609

10.1	Introduction	609
10.2	Boundary Value Problems	611
10.3	Two-Point Boundary Value Problems	611
10.4	Neuman, Dirihlet and Robin Problems	613
10.5	Fourier Series.....	615
10.6	Sturm-Liouville Problem	619

10.6.1	Lagrange Identity	621
10.6.2	Real Eigenvalues	622
10.6.3	Orthogonal Property of Eigenfunctions	622
10.6.4	Heat Conduction Problem	624
10.6.5	Integrating Factors	625
10.6.6	Eigenfunction Expansion	626
10.7	Examples of Sturm-Liouville Problems	626
10.8	Nonhomogeneous BVP	627
10.8.1	Nonhomogeneous Differential Equation	627
10.8.2	Nonhomogeneous Initial Value Problem	630
10.9	Singular Sturm-Liouville Problem	631
10.10	Eigenfunction Expansion for Non-Self-Adjoint DE	633
10.11	Summary and Further Reading	641
10.12	Problems	641

CHAPTER 11: INTEGRAL AND INTEGRO-DIFFERENTIAL EQUATIONS

645

11.1	Introduction	645
11.2	Integral Transforms	646
11.2.1	Laplace Transform	647
11.2.2	Fourier Transform	653
11.2.3	Hankel Transform	657
11.2.4	Mellin Transform	659
11.2.5	Hilbert Transform	662
11.2.6	Other Transforms	663
11.2.7	Governing Equation of Kernel Functions	666
11.3	Abel Integral Equation	668
11.4	Fredholm Integral Equation	671
11.4.1	Solution of the Fredholm Integral Equation of the Second Kind	672
11.4.2	Solution of the Fredholm Integral Equation of the First Kind	676
11.5	Fredholm Alternative Theorem	677
11.6	Adjoint Integral Equation	678
11.7	Volterra Integral Equation	679
11.7.1	Volterra Integral Equations of the First and Second Kinds	679
11.7.2	Liouville-Neumann or Picard Successive Approximation	679
11.7.3	Solution of Volterra Integral Equation of the First Kind	681
11.7.4	Volterra Integral Equation with Separable Kernel	683
11.7.5	Volterra Integral Equation of Convolution Type	684
11.8	Functional Analysis and Vector Space	686
11.9	Integral Equation versus Differential Equation	686
11.10	Integro-Differential Equation	689
11.10.1	Nonlinear Volterra Integro-Differential Equation	691
11.10.1.1	Adomian Decomposition Method	691
11.10.1.2	Modified Adomian Decomposition Method	695

11.10.2	Nonlinear Fredholm Integro-Differential Equation	697
11.11	Summary and Further Reading	698
11.12	Problems	699

CHAPTER 12: ASYMPTOTIC EXPANSION AND PERTURBATION..... 707

12.1	Introduction	707
12.2	Asymptotic Expansion	708
12.2.1	Order Symbols	708
12.2.2	Asymptotic Series	708
12.3	Regular Perturbation Method for ODE	711
12.3.1	Projectile Problem	712
12.3.2	Projectile Problem with Air Resistance	715
12.4	Method of Matched Asymptotic Expansion (MMAE).....	719
12.5	Multiple Scale Perturbation	726
12.6	Liouville-Green or WKB Expansion	730
12.7	Laplace Method	732
12.7.1	Erdelyi's Derivation.....	732
12.7.2	Bleistein-Handelsman Derivation	734
12.7.3	Generalized Formula	736
12.7.4	Laplace Type Integral in Higher Dimensions	740
12.8	Steepest Descent of Riemann.....	742
12.8.1	Direction of Steepest Descent.....	742
12.8.2	Steepest Descent of Regular Saddle Point	746
12.8.3	Steepest Descent of Higher Order Saddle Point	749
12.9	Stationary Phase of Stokes-Kelvin.....	751
12.9.1	Erdelyi's Derivation	751
12.9.2	Stationary Phase of Higher Order	753
12.9.3	Stationary Phase of Higher Dimensions	755
12.10	Navier-Stokes Equations for Surface Waves	757
12.11	Perturbation for Navier-Stokes Equation.....	759
12.11.1	Shallow Water Waves	759
12.11.2	Airy Surface Waves	762
12.11.3	Shallow and Deep Water Limits	766
12.12	Summary and Further Reading	768
12.13	Problems	770

CHAPTER 13: CALCULUS OF VARIATIONS..... 773

13.1	Introduction	773
13.2	Functional	774
13.3	Analogous to Calculus	775
13.4	Euler-Lagrange Equation	775
13.5	Degenerate Cases of Euler-Lagrange Equations.....	778
13.6	Functional of Several Variables.....	779
13.7	Catenoid.....	780

13.8	Brachistochrone	784
13.9	Tautochrone	787
13.10	Lagrange Multiplier	789
13.11	Dido's Problem (Isoperimeter)	789
13.12	Geodesics.....	791
13.13	Catenary as a Sagging Rope	799
13.14	Newton's Problem of Least Resistance.....	802
13.14.1	Introduction	802
13.14.2	Newton's Sine-Square or Cosine-Square Law of Resistance.....	803
13.14.3	Newton's Resistance Law for Supersonic Flow on Solid	805
13.14.4	Eggers et al. (1953) Parameter Solution	806
13.14.5	Approximation by $3/4$ Power Law.....	809
13.15	Summary and Further Reading	810
13.16	Problems	811

CHAPTER 14: VARIATIONAL AND RELATED METHODS..... 817

14.1	Introduction	817
14.2	Virtual Work Principle	818
14.3	Virtual Displacement Principle	819
14.4	Virtual Traction Principle	820
14.5	Hamilton's Principle.....	820
14.6	Veubeke-Hu-Washizu Principle	822
14.7	Hellinger-Reissner Principle.....	824
14.8	Rayleigh-Ritz Method.....	826
14.9	Weighted Residue Method	828
14.9.1	Least Square Method	829
14.9.2	Point Collocation Method.....	829
14.9.3	Petrov-Galerkin Method	829
14.9.4	Galerkin Method.....	829
14.10	Galerkin Method	829
14.11	Kantorovich's Method	837
14.12	Functional for Biharmonic Equation	841
14.13	Vibrations of Circular Plates	844
14.14	Summary.....	846
14.15	Problems	846

CHAPTER 15: FINITE DIFFERENCE AND NUMERICAL METHODS. 851

15.1	Introduction	851
15.2	Finite Difference for First Order ODE.....	852
15.2.1	Forward Difference (Euler) Method	852
15.2.2	Backward Difference (Euler) Method	853
15.2.3	Central Difference (Crank-Nicolson) Method	854
15.2.4	Weighted Residue Approach for Finite Difference Scheme	856

15.2.5	Dirac Delta Function and Point Collocation Method.....	858
15.2.6	Stability Condition of 2-Level Scheme.....	862
15.2.7	Courant-Friedrichs-Lewy Condition.....	865
15.2.8	von Neumann Test	867
15.3	Finite Difference for Second Order ODE	868
15.3.1	Wilson θ Method	871
15.3.2	Newmark β Method.....	873
15.3.3	Stability Condition of 3-Level Scheme.....	874
15.4	Multi-Step Method	876
15.4.1	Adams-Bashforth Method.....	876
15.4.2	Adams-Moulton Method.....	877
15.4.3	Predictor-Corrector Method	878
15.4.4	Backward Differentiation Formula	879
15.5	Runge-Kutta Method	880
15.6	Newton-Raphson and Related Methods.....	885
15.6.1	Newton-Raphson Method	885
15.6.2	Initial Stress Method.....	887
15.6.3	Modified Newton-Raphson Method	887
15.6.4	Quasi-Newton and BFGS Method	888
15.6.5	Secant or Fixed Point Iteration Method.....	888
15.6.6	Convergence Criteria	889
15.7	Control Algorithms for Nonlinear ODE	892
15.7.1	Displacement Control	892
15.7.2	Load Control	893
15.7.3	Arc-Length Control.....	893
15.8	Finite Element Method for Laplace Equation.....	894
15.9	Finite Difference Method for Laplace Equation	896
15.10	Summary and Further Reading	898
15.11	Problems	899
Appendices		901
Appendix A: Greek Letters.....		901
Appendix B: Nobel Prize and Mathematicians.....		902
Appendix C: Proof of Ramanujan's Master and Integral Theorems.....		905
Appendix D: Jacobi Elliptic Functions.....		909
Appendix E: Euler's Constant		915
Appendix F: π		918
Selected Biographies		931
References		951
Author Index.....		961
Subject Index		967
