**Preface to the Second Edition** vii

**Preface to the First Edition** ix

## 1. Introduction

- 1.1 Classification and Phenomenological Discussion 1
- 1.2 Typical Practical Problems Involving Multiphase Flows 3
- 1.3 Computational Fluid Dynamics as a Research Tool for Multiphase Flows 4
- 1.4 Computational Fluid Dynamics as a Design Tool for Multiphase Flows 10
- 1.5 Impact of Multiphase Flow Study on Computational Fluid Dynamics 13
- 1.6 Scope of the Book 17

## 2. Governing Equations and Boundary Conditions

- 2.1 Basic Concepts of Fluid Mechanics 19
- 2.2 Background of Different Approaches 20
- 2.3 Averaging Procedure for Multiphase Flow 21
- 2.4 Equations of Motion for Continuous Phase 24
- 2.5 Comments and Observations on the Governing Equations for the Two-Fluiding Approach 42
- 2.6 Equations of Motion for Disperse Phase 48
- 2.7 Turbulence in Transport Phenomena 49
- 2.8 Differential and Integral Form of the Transport Equations 67
- 2.9 Boundary Conditions and Their Physical Interpretation 75
- 2.10 Summary 82

## 3. Solution Methods for Multiphase Flows

- 3.1 Introduction 85
- Mesh Systems 87
- 3.2 Consideration for a Range of Multiphase Flow Problems 87

- Eulerian-Eulerian Framework 101
- 3.3 Numerical Algorithms 101
- 3.4 Solution Algorithms 139
- Eulerian-Lagrangian Framework 171
- 3.5 Numerical and Solution Algorithms 171
- Interface Tracking/Capturing Algorithms 193
- 3.6 Basic Considerations of Interface Tracking/Capturing Methods 193
- 3.7 Summary 225

## 4. Gas-Particle and Liquid-Particle Flows

- 4.1 Introduction 227
- 4.2 Multiphase Models for Gas-Particle Flows 236
- 4.3 Multiphase Models for Liquid-Particle Flows 261
- 4.4 Worked Examples 273
- 4.5 Summary 318

## 5. Gas-Liquid Flows

- 5.1 Introduction 321
- 5.2 Multiphase Models for Gas-Liquid Flows 326
- 5.3 Population Balance Approach 338
- 5.4 Bubble Interaction Mechanisms 349
- 5.5 Modeling Subcooled Boiling Flows 362
- 5.6 Worked Examples 377
- 5.7 Summary 414

## 6. Free Surface Flows

- 6.1 Introduction 415
- 6.2 Multiphase Models for Free Surface Flows 416
- 6.3 Relevant Worked Examples 419
- 6.4 Summary 462

## 7. Granular Flows

- 7.1 Introduction 463
- 7.2 Multiphase Models for Granular Flows 464

- 7.3 Particle-Particle Interaction Without Adhesion 465
- 7.4 Particle-Particle Interaction With Adhesion 476
- 7.5 Worked Examples 485
- 7.6 Summary 508

## 8. Freezing/Solidification

- 8.1 Introduction 509
- 8.2 Mathematical Formulation 510
- 8.3 Numerical Procedure 515
- 8.4 Worked Examples 527
- 8.5 Summary 542

## 9. Three-Phase Flows

- 9.1 Introduction 543
- 9.2 Description of Problem in the Context of Computational Fluid Dynamics 544

- 9.3 Modelling Approaches for Gas-Liquid-Solid Flows 546
- 9.4 Evaluation of Multiphase Models for Gas-Liquid-Solid Flows 553
- 9.5 Summary 564

## 10. Future Trends in Handling Turbulent Multiphase Flows

- 10.1 Introduction 567
- 10.2 Direct Numerical Simulation of Multiphase Flows 569
- 10.3 Large Eddy Simulation of Multiphase Flows 573
- 10.4 On Modelling Gas-Liquid-Solid Fluidisation 582
- 10.5 Some Concluding Remarks 596

## References 597
