Preface	viii	2.7.4 Driven piles	50
Examples	ix	2.7.5 Driving precast piles	53
		2.7.6 Test loading	53
		Bibliography	66
1 Site investigations	1		
1.1 Walk-over survey	1	3 Foundations in cohesive soils	67
1.2 Desk study	2	3.1 Introduction	67
1.3 Site investigation: field work	4	3.2 Settlements in cohesive soils	67
1.3.1 Trial pit logs	4	3.3 Consolidation settlement	68
1.3.2 Borehole record	4	3.3.1 Bearing capacity of cohesive soils	68
1.4 Site investigation procedure	4	3.3.2 Vertical stress distribution	70
1.4.1 Borehole logs	4	3.3.3 Construction problems on clay sites	70
1.4.2 Trial pit logs	4	3.3.4 Foundation designs on clay soils	71
1.4.3 Groundwater	4	3.3.5 Settlements in clay soils	72
1.4.4 Standard penetration tests	4	3.4 Moisture movements	74
1.5 Interpretation of laboratory testing	9	3.4.1 Liquid limit test	76
1.5.1 Chemical tests	9	3.4.2 Plastic limit test	77
1.6 Solution features	11	Bibliography	79
1.6.1 Limestones	11		
1.6.2 Chalk	11		
1.6.3 Salt	13	4 Foundations in sands and gravels	81
1.6.4 Gypsum	13	4.1 Classification of sands and gravels	81
Case study 1.1 Investigation of former mining site, Sheffield	14	4.1.1 Composite sands and gravels	81
Bibliography	21	4.1.2 Dilatant sands	82
		4.1.3 Calcareous sands	82
2 Foundation design		4.2 Relative densities of granular soils	82
2.1 Introduction	23	4.2.1 Field density assessment	82
2.1.1 Width of footing	23	4.2.2 Visual observations	82
2.1.2 Soft spots	23	4.2.3 Groundwater levels	83
2.1.3 Stratum variation in excavation	23	4.2.4 The standard penetration test	83
2.1.4 Firm clays overlying soft strata	23	4.2.5 Interpretation of SPT results	84
2.1.5 Depth of footings	25	4.2.6 Ultimate bearing capacities	84
2.2 Widened reinforced strip footings	26	4.3 Construction problems in granular soils	86
2.3 Reinforced strip footings on replacement granular fill	29	4.4 Foundation design in granular soils	87
2.4 Trench fill foundations	32	4.5 Plate bearing tests	89
2.5 Raft foundations	33	4.6 Piling into sands and gravel strata	89
2.6 Pad and pier foundation	34	4.6.1 Bored piles	90
2.6.1 Disused wells	44	4.6.2 Continuous flight auger piles	90
2.7 Piled foundations	44	4.6.3 Design of bored piles	90
2.7.1 Bored piles	47	4.6.4 Set calculations	92
2.7.2 Design of a bored pile	47	4.6.5 Dynamic pile formula	92
2.7.3 Design of bored and driven piles	48	4.6.6 Re-drive tests	93
	48	4.6.7 Base-driven steel tube piles	93
		4.6.8 Top-driven steel piles	93
		Bibliography	94

5 Building in mining localities	95	7.2.2 Additional weight of regrade fill	147
5.1 Coal mining, past and present	95	7.2.3 Changes in the groundwater level or surface runoff	147
5.2 Coal shafts	96	7.2.4 Excavations for deep drainage	147
5.3 Shallow mineworkings	97	7.2.5 Removal of trees and vegetation	147
5.4 Drilling investigations	99	7.2.6 Split-level housing	148
5.5 Stabilizing old workings	99	7.3 Retaining systems	148
5.5.1 Collapsed workings	99	7.3.1 Gravity type retaining systems	148
5.5.2 Special conditions	100	7.3.2 Cantilever walls: reinforced concrete or brickwork	148
5.6 Foundations in areas with shallow workings	100	7.3.3 Gabions, crib walling, reinforced earth	149
5.7 Active mining	100	7.3.4 Steel sheet piling	150
5.8 Future mining	101	7.4 Designing retaining walls	150
5.9 Mitigating the effects of mining subsidence	101	7.4.1 Active pressure on walls	150
5.9.1 Longwall mining (advancing system)	101	7.4.2 Surcharge loading	151
5.9.2 Designing buildings for future mining subsidence	102	7.4.3 Passive resistance (granular soils)	152
5.9.3 CLASP system of construction	103	7.5 Cantilevered retaining walls	152
5.9.4 Mining rafts	104	7.5.1 Mass brick or block walls	152
5.9.5 Irregular-shaped units	107	7.5.2 Reinforced cavity walls	156
5.9.6 Designing strip footings in active mining areas	109	7.5.3 Pocket-type walls	156
5.9.7 Movement joints	112	7.6 Damp-proofing to retaining walls	169
Bibliography	113	7.6.1 Type A structures: tanked protection	169
		7.6.2 Type C structures: drained cavity construction	172
		Bibliography	174
6 Sites with trees	113		
6.1 Foundation design	113	8 Building on filled ground	175
6.1.1 Climatic variation	119	8.1 Opencast coal workings	177
6.1.2 Distances between trees and foundations	119	8.2 Foundations	178
6.1.3 Foundation depths related to proposed tree and shrub planting	121	8.2.1 Stiff raft foundations	178
6.1.4 Measurement of foundation depths	121	8.2.2 Piled foundations	178
6.2 Building on wooded sites	122	8.3 Suspended ground-floor construction	179
6.2.1 Piled foundations	122	8.4 Compaction of fills to an engineered specification	181
6.2.2 Deep trench-fill concrete foundations	123	8.4.1 Procedure	181
6.2.3 Deep strip footings with loose stone backfill	124	8.4.2 Site testing before backfilling	181
6.2.4 Stiff raft foundations on a thick cushion of granular fill	124	8.4.3 Foundations	182
6.2.5 Deep pad and stem foundations	125	8.4.4 Roads and drainage	182
6.3 Precautions to take when there is evidence of clay desiccation	125	8.4.5 Groundwater	182
6.3.1 Suspended floors	126	8.5 Ground improvement techniques	182
6.3.2 Drainage and services	126	8.5.1 Dynamic consolidation	182
6.3.3 Protection to drainage	126	8.5.2 Surcharge loading	182
6.3.4 Precautions against clay heave	127	8.6 Compaction of structural fills	182
6.4 Foundations in granular strata overlying shrinkage clays	134	8.6.1 Materials specification	183
Bibliography	136	8.6.2 Definitions	183
		8.6.3 Suitable fill materials	183
		8.6.4 Unsuitable materials	183
		8.6.5 Compaction	183
		8.6.6 Testing on site	184
		Bibliography	184
7 Developing on sloping sites	137		
7.1 Stability of slopes	137	9 Ground improvement	185
Case study 7.1 Sloping site with clay fills over boulder clay	141	9.1 Vibro-compaction techniques	186
7.2 Developing on sloping sites	146	9.1.1 Types of treatment	186
7.2.1 Additional weight of dwellings	146	9.1.2 Ground conditions	187

9.1.3	Engineering supervision	190	11.4.1	Asbestos	235
9.1.4	Design of vibro-compaction stone columns	193	11.4.2	Scrap yards	235
9.1.5.	Foundations on vibro-compaction sites	197	11.4.3	Sewage treatment works	235
9.2	Dynamic consolidation	198	11.4.4	Timber manufacturing and timber treatment works	235
9.2.1	Testing	201	11.4.5	Railway land	236
9.3	Preloading using surcharge materials	201	11.4.6	Petrol stations and garage sites	236
9.4	Improving soils by chemical or grout injection	202	11.4.7	Gasworks sites	236
Bibliography		203	11.4.8	Metal smelting works	236
			11.4.9	Old mineral workings	236
			11.4.10	Toxicological effects of contaminants	238
10	Building up to existing buildings	205	11.5	Landfill sites	239
10.1	Site investigation	205	11.5.1	Gas migration	240
10.2	Foundation types	205	11.5.2	Gas monitoring	241
10.3	Underpinning	212	11.5.3	Carbon dioxide	241
10.3.1	Beam and pad solution	216	11.5.4	External measures	242
10.3.2	Pile and needle beam solution	216	11.6	Desk study	244
Case study 10.1	Investigation and underpinning of detached house on made ground, York	218	11.6.1	Local geological study	244
Case study 10.2	Differential settlement, Leyburn	219	11.6.2	Industrial history of the site	244
Case study 10.3	House on made ground, Beverley	222	11.6.3	Mining investigation	244
Case study 10.4	House founded on sloping rock formation, Scarborough	223	11.6.4	Site reconnaissance	244
10.4	Shoring	226	11.7	Site investigation	245
Bibliography		227	11.7.1	Trial pits	245
		229	11.7.2	Boreholes	245
		229	11.7.3	Testing for toxic gases	245
		230	11.7.4	Chemical analysis	245
		233	11.7.5	Safety	245
			11.7.6	Conclusion	245
11	Contaminated land	229	Case study 11.1		246
11.1	Contaminated sites	229	Bibliography		248
11.2	UK policy on contaminated land	229			
11.3	Risk assessment	230			
11.4	Industrial processes	233	Index		251
