Symbols xvii

Chapter 1

Introduction 1

- 1.1 A Brief History of Structural Analysis 2
- 1.2 Computer Programs 3
 - 1.2.1 Computational Flow and General Purpose Programs 4
 - 1.2.2 The Program MASTAN2 6
- References 8

Chapter 2

Definitions and Concepts 9

- 2.1 Degrees of Freedom 9
- 2.2 Coordinate Systems and Conditions of Analysis 11
- 2.3 Structure Idealization 14
- 2.4 Axial Force Element—Force-Displacement Relationships 16
 - 2.4.1 Element Stiffness Equations 16
 - 2.4.2 Element Flexibility Equations 18
- 2.5 Axial Force Element—Global Stiffness Equations 19
- 2.6 Examples 20
- 2.7 Problems 26

Chapter 3

Formation of the Global Analysis Equations 31

- 3.1 Direct Stiffness Method—The Basic Equations 31
- 3.2 Direct Stiffness Method—The General Procedure 39
- 3.3 Some Features of the Stiffness Equations 46
- 3.4 Indeterminacy 47
- 3.5 Problems 49
- References 55

Chapter 4

Stiffness Analysis of Frames—I 56

- 4.1 Stress-Strain Relationships 56
- 4.2 Work and Energy 58
- 4.3 Reciprocity 60
- 4.4 Flexibility-Stiffness Transformations 62
 - 4.4.1 Stiffness to Flexibility Transformation 62
 - 4.4.2 Flexibility to Stiffness Transformation 63

4.5	The Framework Element Stiffness Matrix	66
4.5.1	Axial Force Member	67
4.5.2	Pure Torsional Member	67
4.5.3	Beam Bent About Its z Axis	68
4.5.4	Beam Bent About Its y Axis	72
4.5.5	Complete Element Stiffness Matrix	73
4.6	A Commentary on Deformations and Displacement Variables	74
4.6.1	Neglected Deformations	74
4.6.2	Displacement Variables	75
4.7	Examples	76
4.8	Problems	88
	References	92

Chapter 5

Stiffness Analysis of Frame—II 93

5.1	Coordinate Transformations	93
5.1.1	Transformation Matrices	94
5.1.2	Transformation of Degrees of Freedom	98
5.1.3	Transformations and Energy	98
5.1.4	Rectangular Transformation Matrices	100
5.2	Loads Between Nodal Points	108
5.3	Self-Straining—Initial and Thermal Strain Conditions	120
5.3.1	Initial Strain Problems	122
5.3.2	Thermal Strain Problems	125
5.4	Problems	130

Chapter 6

Virtual Work Principles 137

6.1	Principle of Virtual Displacements—Rigid Bodies	138
6.2	Principle of Virtual Displacements—Deformable Bodies	142
6.3	Virtual Displacement Analysis Procedure and Detailed Expressions	144
6.3.1	General Procedure	144
6.3.2	Internal Virtual Work	145
6.3.3	External Virtual Work	148
6.4	Construction of Analytical Solutions by the Principle of Virtual Displacements	150
6.4.1	Exact Solutions	150
6.4.2	Approximate Solutions and the Significance of the Chosen Virtual Displacements	153
6.4.3	Examples	154
6.5	Principle of Virtual Forces	158
6.5.1	Equations of Equilibrium	158
6.5.2	Characteristics of Virtual Force Systems	161

6.5.3	Formulation of the Virtual Forces Principle	162
6.5.4	Construction of Analytical Solutions by the Virtual Forces Principle	164
6.6	Problems	170
	References	173

Chapter 7

Virtual Work Principles in Framework Analysis 174

7.1	Description of the Displaced State of Elements	175
7.1.1	Definition of the Shape Function Mode of Description	175
7.1.2	Formulation of Shape Functions	176
7.1.3	Characteristics of Shape Functions	180
7.2	Virtual Displacements in the Formulation of Element Stiffness Equations	181
7.2.1	Construction of Expressions for Real and Virtual Displacements	181
7.2.2	Virtual Displacements Formula for an Element Stiffness Matrix	182
7.2.3	Application to Standard Axial, Torsional, and Flexural Elements	183
7.3	Nonuniform Elements	184
7.4	Nonuniform Torsion	186
7.4.1	An Element Stiffness Matrix	187
7.4.2	Application and Examples	190
7.5	Loads Between Nodal Points and Initial Strain Effect—A General Approach	194
7.6	Virtual Forces in the Formulation of Element Force-Displacement Equations	199
7.6.1	Construction of Element Equations by the Principle of Virtual Forces	199
7.6.2	Further Applications—Shearing Deformations and Curved Elements	203
7.7	Problems	209
	References	214

Chapter 8

Nonlinear Analysis of Frames—An Introduction 216

8.1	Nonlinear Behavior, Analysis, and Design	216
8.1.1	Sources of Nonlinearity	217
8.1.2	Levels of Analysis	218
8.1.3	Examples from Established Theory	220
8.1.4	A Commentary on Stability	230
8.2	A Matrix Approach	234
8.3	The Equations of Analysis and Their Solution	235
8.3.1	Equation Solution—The Options	236
8.3.2	A Fundamental Problem	237
8.4	Problems	239
	References	241

Chapter 9

Geometric Nonlinear and Elastic Critical Load Analysis 242

- 9.1 Geometric Stiffness Matrices for Planar Elements 243
 - 9.1.1 Axial Force Member 243
 - 9.1.2 Combined Bending and Axial Force 245
 - 9.1.3 Examples of Plane Structure Analysis 246
- 9.2 Combined Torsion and Axial Force 254
- 9.3 Three Dimensional Geometric Nonlinear Analysis—An Overview 257
- 9.4 Examples of Three Dimensional Structure Analysis 259
- 9.5 Problems 263
- References 268

Chapter 10

Material Nonlinear Analysis 269

- 10.1 Nonlinear Material Behavior 269
 - 10.1.1 Plasticity Theory 270
 - 10.1.2 Plastic Analysis 272
 - 10.1.3 Further Considerations 273
- 10.2 A Plastic Hinge Method For Ductile Frames 274
 - 10.2.1 The Yield Surface and a Plastic Reduction Matrix 274
 - 10.2.2 Definition of the Yield Surface 277
- 10.3 Inelastic Critical Load Theory 278
- 10.4 Examples 279
- 10.5 The Yield Surface Concept—A Brief Survey of Further Applications 290
 - 10.5.1 Spread of Plasticity 290
 - 10.5.2 Multiple Yield Surfaces 292
 - 10.5.3 Reinforced Concrete Members 293
- 10.6 Problems 294
- References 299

Chapter 11

Solution of Linear Algebraic Equations 301

- 11.1 The Basic Choice—Direct Inversion versus Elimination or Iteration 302
- 11.2 Direct Elimination Methods 302
 - 11.2.1 Gauss Elimination 304
 - 11.2.2 Cholesky Method 307
- 11.3 Iterative Methods 310
 - 11.3.1 Gauss-Seidel and Jacobi Iterations 310
 - 11.3.2 Conjugate Gradient Method 312
- 11.4 Sparseness and Bandedness 316
- 11.5 Frontal Solvers 317
- 11.6 Errors 322
 - 11.6.1 The Condition Number 326
 - 11.6.2 Estimate of Condition Number 327

11.6.3	Error Estimates and Preconditioning	329
11.6.4	Detecting, Controlling, and Correcting Error	333
11.7	Problems	325
	References	337

Chapter 12 Solution of Nonlinear Equilibrium Equations 339

12.1	Incremental Analysis	339
12.2	Incremental Single-Step Methods	340
12.2.1	Euler Method	341
12.2.2	Second-Order Runge-Kutta Methods	341
12.3	Incremental-Iterative Methods	345
12.3.1	Load Control Method	347
12.3.2	Displacement Control Methods	348
12.3.3	Work Control Method	349
12.3.4	Constant Arc Length Methods	349
12.3.5	Modified Iterative Technique	349
12.3.6	Convergence Criteria	350
12.4	Automatic Load Incrementation	351
12.4.1	Change in Stiffness	351
12.4.2	Number of Iterations	352
12.5	Element Result Calculations	352
12.5.1	Updating Deformed Geometry	352
12.5.2	Force Recovery	352
12.6	Plastic Hinge Constraints	355
12.7	Limit Point and Post-Limit Analysis	358
12.8	Critical Load Analysis—An Eigenproblem	360
12.8.1	Reduction to Standard Form	361
12.8.2	Polynomial Expansion	363
12.8.3	Power Method	364
12.8.4	Inverse Iteration	367
12.9	Problems	370
	References	373

Chapter 13 Special Analysis Procedures 375

13.1	Condensation	376
13.2	Substructuring	377
13.3	Constraints	385
13.4	Joint Coordinates	388
13.5	Connections and Joints	393
13.5.1	Flexible Connections	393
13.5.2	Finite Joint Size	398
13.6	Symmetry and Antisymmetry	403

13.7	Reanalysis Techniques	408
13.8	Problems	413
	References	418

Appendix A

Nonlinear Analysis—A Further Look 419

A.1	Virtual Displacement Principles in Lagrangian Formulations	420
A.2	An Updated Lagrangian Formulation and Its Linearization	425
A.3	Application to the Framework Element	426
A.4	Finite Rotations and Equilibrium in the Deformed Configuration	431
A.4.1	The Finite Rotation Equation	432
A.4.2	Application of the Finite Rotation Equation to the Framework Element	433
A.5	Nonuniform Torsion	437
	References	441

Appendix B

On Rigid Body Motion and Natural Deformation 444

B.1	The Nature of the Problem	444
B.2	Distinguishing Between Rigid Body Motion and Natural Deformation	445
B.3	Critique of Force Recovery Methods	447
B.3.1	The Natural Deformation Approach	447
B.3.2	The Elementary Approach	448
	References	450
