

CONTENTS

1	Introduction to Biotechnical Stabilization	1
1.0	The Biotechnical/Soil Bioengineering Approach to Slope Protection and Erosion Control	1
1.1	Historical Development	3
1.2	Rationale for Biotechnical Approach	6
1.3	Hedgerows as Quintessential Biotechnical Structures	8
1.4	Extent and Severity of Soil Erosion and Mass Movement	10
1.4.1	Soil Erosion	10
1.4.2	Mass Movement	12
1.5	Scope and Organization of Book	16
1.6	References Cited	17
2	Surficial Erosion and Mass Movement	19
2.0	Introduction	19
2.1	Definitions	19
2.1.1	Surficial Erosion	19
2.1.2	Mass Movement	20
2.1.3	Salient Characteristics and Differences	20
2.2	Nature of Surficial Erosion	21
2.2.1	Agents and Types of Erosion	21
2.2.2	Mechanics of Erosion	22
2.3	Principal Determinants of Erosion	23
2.3.1	Rainfall Erosion	23
2.3.2	Wind Erosion	25
2.4	Types of Water Erosion	27
2.5	Soil Loss Predictions	30
2.5.1	Historical Development	30
2.5.2	Applications of USLE	31
2.5.3	Limitations of USLE	35
2.6	Erosion Control Principles	36
2.7	Nature of Mass Movements	37
2.7.1	Types of Slope Movements	37

2.7.2	Causes of Slope Failure	38
2.7.3	Indicators of Slope Instability	39
2.8	Slope Stability Predictions	41
2.8.1	Approaches to Analysis	41
2.8.2	Limit Equilibrium Analysis	41
2.8.3	Shear Strength Parameters	43
	Total Stress Analysis	43
	Effective Stress Analysis	44
2.8.4	Translational Slope Failures	45
	Selection of Soil Parameters	48
	Stability of Road Fills	48
2.9	Control of Mass Wasting	51
2.10	References Cited	51

3 Role of Vegetation in the Stability of Slopes

54

3.0	Introduction	54
3.1	Influence on Surficial Erosion	55
3.1.1	Stabilizing Functions	55
3.1.2	Vegetation Cover Factor	55
3.1.3	Recommended Vegetation	56
3.2	Influence on Streambank Erosion	57
3.3	Influence on Mass Stability	59
3.3.1	Hydromechanical Effects	59
	Beneficial versus Adverse Effects	59
	Beneficial Effects	59
	Detrimental Effects	61
3.4	Consequences of Vegetation Removal	61
3.5	Root Morphology and Strength	64
3.5.1	Introduction	64
3.5.2	Root Architecture	64
	Structure Classification and Terminology	64
	Depth and Distribution of Root Systems	65
	Root Spread	68
	Factors Affecting Root Development	69
	Root Structure/Distribution: Experimental Methods	70
3.5.3	Root Strength	72
	Factors Affecting Strength	72
	Ranges in Root Tensile Strength and Modulus	73
	Root Decay and Strength Loss	76

- 3.6 Root/Fiber Soil Reinforcement 79
 - 3.6.1 Force-Equilibrium Models 79
 - Fiber Break Mode 80
 - Fiber Stretch Mode 82
 - Fiber Slip Mode 83
 - 3.6.2 Laboratory and In Situ Tests 84
 - 3.6.3 Stability Analyses 90
 - Stability Without Roots 93
 - Stability With Roots 94
- 3.7 Guidelines for Maximizing Benefits of Vegetation 95
 - 3.7.1 General Observations 95
 - 3.7.2 Species Selection 96
 - 3.7.3 Placement Strategies 96
 - 3.7.4 Coppicing 99
 - 3.7.5 Planting and Management Strategies 99
- 3.8 Conclusions 101
- 3.9 References Cited 102

4 Principles of Biotechnical and Soil Bioengineering Stabilization

106

- 4.0 Introduction 106
- 4.1 Classification of Different Approaches 106
- 4.2 Conventional Approaches to Slope Protection and Erosion Control 107
 - 4.2.1 Inert Construction 107
 - Retaining Structures 108
 - Revetment Systems 108
 - Ground Covers 108
 - 4.2.2 Live Construction 109
- 4.3 Mixed Construction Systems 110
 - 4.3.1 General Description 110
 - Biotechnical Stabilization 110
 - Soil Bioengineering 111
 - Reinforced Grass 112
 - 4.3.2 Soil Bioengineering Attributes and Limitations 112
 - Labor/Skill Requirements 115
 - Utilization of Natural and/or Indigenous Materials 115
 - Cost Effectiveness 115
 - Environmental Compatibility 115
 - Self-Repairing Characteristics 117
 - Planting Times 117
 - Difficult Sites 119

- 4.3.3 Compatibility Between Plants and Structures 119
- 4.3.4 Applications 122
- 4.4 Impact of Slope Grading 124
 - 4.4.1 Conventional Grading 125
 - 4.4.2 Landform Grading 125
- 4.5 References Cited 129

5 Structural-Mechanical Components of Biotechnical Stabilization

130

- 5.0 Introduction 130
- 5.1 Retaining Structures—General 130
 - 5.1.1 Purpose and Function of Structure 130
 - Toe-Walls 130
 - Toe-Bench Structures 131
 - 5.1.2 Basic Types of Retaining Structures 132
 - Cantilever and Counterfort Walls 134
 - Crib Walls 135
 - Gabion Walls 135
 - Reinforced Earth Walls 135
 - Mechanically Stabilized Earth Walls 135
 - Rock Breast Walls and Articulated Block Walls 136
 - Pile and Tie-Back Walls 136
 - 5.1.3 Selection Criteria 136
- 5.2 Stability Requirements 137
 - 5.2.1 External Stability 138
 - Overturning 141
 - Sliding 141
 - Bearing Capacity 141
 - 5.2.2 Key Factors Affecting External Stability 144
 - 5.2.3 Internal Stability 146
 - 5.2.4 Standard Designs 148
- 5.3 Porous, Gravity Retaining Structures 149
 - 5.3.1 Rock Breast Walls 149
 - 5.3.2 Gabion Walls 152
 - 5.3.3 Crib Walls 155
 - Timber Cribs 155
 - Concrete Cribs 158
 - 5.3.4 Geogrid Walls 160
 - Welded-Wire Walls 162
 - Synthetic (Polymeric) Geogrids 164
- 5.4 Revetments 167
 - 5.4.1 Purpose and Function of Revetments 167

- 5.4.2 Types of Revetments 168
 - Rock Riprap 169
 - Gabions 170
 - Articulated Blocks 170
- 5.4.3 Stability Requirements 172
 - Armor Weight 172
 - Range of Allowable Stone Weights 174
 - Toe and Flank Protection 176
 - Runup Calculations 176
- 5.5 References 176

6 Vegetative Components and Considerations 178

- 6.0 Introduction 178
 - 6.0.1 Basic Requirements for Successful Revegetation 178
 - 6.0.2 Constraints on Revegetation 179
 - Physical 179
 - Regulatory 179
 - Economic 180
- 6.1 Site Analysis 181
 - 6.1.1 Climate 181
 - 6.1.2 Native Vegetation 181
 - 6.1.3 Microsite Parameters 182
 - Microclimate 182
 - Topography 182
 - Soils 182
- 6.2 Seeds and Planting Stocks 183
 - 6.2.1 Seeds 184
 - 6.2.2 Transplants 184
 - 6.2.3 Cuttings 184
 - 6.2.4 Vetiver Grass 184
 - Characteristics 185
 - Uses and Applications 185
- 6.3 Selection and Source of Plant Materials 185
 - 6.3.1 Plant Material Spectrum 185
 - 6.3.2 Native versus Introduced Species 186
 - 6.3.3 Plant Succession 186
 - 6.3.4 Selection Criteria 188
 - Site Conditions 188
 - Stabilization Functions and Objectives 189
 - Suitability for Slope Stabilization 191
 - Suitability for Soil Bioengineering Construction 191

6.3.5	Sources of Plant Materials	191
	Seeds and Transplants	191
	Cuttings	191
6.4	Site Preparation	192
6.4.1	Grading and Shaping	192
	Cut Slopes	193
	Fill Slopes	194
6.4.2	Drainage and Water Control	195
	Surface Flow	195
	Energy Dissipation	198
	Subsurface Flow	199
6.5	Aquisition and Handling of Indigenous Cuttings	202
6.5.1	Harvesting and Gathering	202
6.5.2	Handling	202
6.5.3	Transportation	205
6.5.4	Storage and Timing	207
	Arrival Time	207
	Normal Storage	207
	Refrigerated Storage	207
6.6	Installation and Establishment of Live Cuttings	208
6.6.1	Installing Cuttings	208
	Installation Time	208
	Planting Medium	208
	Soil Tests and Preparation	209
6.6.2	Inspection and Quality Control	209
	Preconstruction	210
	During Construction	210
	Establishment Period	210
	Final Inspection	211
6.6.3	Maintenance and Aftercare	211
6.7	Special Methods for Structures	212
6.7.1	Crib Walls	212
6.7.2	Breast Walls	212
6.7.3	Gabion Walls	212
6.7.4	Gabion Revetments	213
6.8	References	213

7 Soil Bioengineering Stabilization: Techniques and Methods 214

7.0	Introduction	214
7.0.1	Definition	214
7.0.2	Salient Characteristics	214
7.0.3	Uses and Applications	214

7.1	Live Staking	215
7.1.1	Description	215
7.1.2	Uses	216
7.1.3	Preparation	216
7.1.4	Installation	217
7.2	Live Fascines	218
7.2.1	Description	218
7.2.2	Uses	218
7.2.3	Preparation	221
7.2.4	Staking	221
7.2.5	Installation	222
7.3	Live Fascines Used in Pole Drains	226
7.3.1	Description	226
7.3.1	Uses	226
7.3.1	Installation	226
7.4	Fascines with Subsurface Interceptor Drain	229
7.4.1	Description	229
7.4.2	Uses	229
7.4.3	Installation	229
7.5	Brushlayering	231
7.5.1	Description	231
	Fill Slopes	231
	Cut Slopes	232
7.5.2	Uses	233
7.5.3	Preparation	235
7.5.4	Installation	235
7.6	Vegetated Geogrids	237
7.6.1	Description	237
7.6.2	Uses	237
7.6.3	Materials and Preparation	238
7.6.4	Installation	240
7.7	Branchpacking	242
7.7.1	Description	242
7.7.2	Applications	242
7.7.3	Preparation	243
7.7.4	Installation	243
7.8	Live Gully Repair Fill	244
7.8.1	Description	244
7.8.2	Applications	244
7.8.3	Preparation	244
7.8.4	Installation	244

7.9	Vegetated (Live) Crib Walls	247
7.9.1	Description	247
7.9.2	Objective	248
7.9.3	Effectiveness and Applications	248
7.9.4	Materials	248
7.9.5	Installation	248
7.10	Live Slope Grating	251
7.10.1	Description	251
7.10.2	Objective	251
7.10.3	Effectiveness and Applications	251
7.10.4	Materials	252
7.10.5	Installation	252
7.11	Selection Criteria	257
7.11.1	Selection by General Slope Type and Location	257
	Suitable Methods for Hillside or Upland Slopes	257
7.11.2	Selection by Soil and Site Conditions	257
	Selection for Environmental and Recreational Goals	257
7.12	Relative Costs of Soil Bioengineering Measures	258
7.13	Selected Case Studies (Applications)	259
	Application Number 1: Cut Slope Stabilization	259
	Application Number 2: Riverbank Stabilization	264
	Application Number 3: Gully Washout Repair	268
	Application Number 4: Backslope Stabilization	273
7.14	References and Additional Reading	277

8 Biotechnical Stabilization: Guidelines for Vegetative Treatment of Revetments and Retaining Structures

279

8.0	Introduction	279
8.1	Role and Function of Structural Components	279
8.1.1	Retaining Structures	280
8.1.2	Revetments	280
8.1.3	Articulated Block Walls	280
8.1.4	Slope Gratings (Three-Dimensional Cellular Grids)	280
8.2	Select Soil Backfill for Plant Materials	280
8.2.1	Engineering versus Agronomic Requirements	280
8.2.2	Techniques for Achieving Compatibility	281
	Modification of Backfill Specifications	281
	Amended Zones	281
	Placement of Cuttings	281
8.2.3	Soil Testing and Preparation	281

- 8.3 Vegetated Riprap (Joint Planting) 282
 - 8.3.1 Description 282
 - 8.3.2 Objective 282
 - 8.3.3 Effectiveness 282
 - 8.3.4 Materials 283
 - 8.3.5 Installation 283
- 8.4 Vegetated Grade Stabilization Structures 284
 - 8.4.1 Description 284
 - 8.4.2 Objective 284
