Abstract	5
The list of the most important abbreviations and symbols	10
The list of basic terms	10
The list of the most important abbreviations and symbols . . .	13
1 Introduction	14
1.1. Purpose of research work	20
1.2. Research hypothesis	21
1.3. The scope of research works	21
2 Sedimentation process of suspensions	21
2.1. Clarification	25
2.2. Thickening	26
2.3. Classification	29
2.4. Kynch theory	30
2.5. Hazen's law	32
3 Multiflux sedimentation tanks	33
3.1. Counter-current sedimentation	34
3.2. Co-current sedimentation	36
3.3. Cross-current sedimentation	37
4 Particle morphology	38
4.1. Characteristic dimensions	38
4.2. The shape of the grains	40
4.3. Equivalent particle diameters	45
4.4. Fractal particle structure	47
4.5. Summary	48
5 Modeling of the multiflux sedimentation process	49
6 Research of coal suspension properties	56
6.1. Research material	57
6.2. Concentration of the coal suspension	57
6.3. Determination of the density of the solid phase of the sus- pension	58
6.3.1 Density measurement methodology	58

6.3.2	Solid phase density results	58
6.4.	Particle size characteristics	60
6.4.1	Sedimentation balance	61
6.4.2	Laser diffractometry	65
6.4.3	Determination of the chemical composition of the coal suspension	70
6.5.	Summary	75
7	Laboratory tests of the sedimentation process under static conditions	76
7.1.	Purpose of research	76
7.2.	Stand description	76
7.3.	Research methodology	77
7.4.	Methods of phase separation boundary reading	78
7.4.1	Sedimentation test with video recording - stationary camera	79
7.5.	The results of laboratory tests under static conditions . .	95
7.5.1	Volume concentration	95
7.5.2	The influence of the inclination angle of a multiflux conduit on the course of the sedimentation process	96
7.5.3	The influence of the suspension concentration on the course of the sedimentation processs	104
7.6.	Discussion of the results of the sedimentation process un- der static conditions	106
7.7.	Mathematical description of sedimentation curves	107
7.8.	Summary	115
8	Laboratory tests of the sedimentation process using flocc- ulation under static conditions	116
8.1.	Purpose of research	118
8.2.	Stand description	118
8.3.	Research methodology	118
8.4.	The results of static tests with the addition of flocculant	119
8.4.1	The static test results with a flocculant dose of 200 ppm	120
8.4.2	The static tests with different doses of flocculant .	120
8.5.	Summary	122

9	Research of the sedimentation process in flow conditions	126
9.1.	Purpose of research	126
9.2.	Stand description	126
9.3.	Research methodology	128
9.4.	The results of sedimentation studies under flow conditions	129
9.4.1	Measurement under flow conditions in a system without flocculation	130
9.4.2	Measurements in flow conditions in a flocculation system	131
9.5.	Summary	132
10	Modeling of sedimentation efficiency depending on the effectiveness of the surface load on the basis of the exper- imental results	136
10.1.	Theoretical analysis for the raw suspension	136
10.2.	Theoretical analysis of the sedimentation process for the suspension with the addition of flocculant	138
11	The empirical model of the multiflux sedimentation pro- cess for coal suspension	144
11.1.	Quasi-linear approximation	146
11.2.	Multiple Regression	148
11.3.	The empirical model – the degree of compaction	150
11.4.	The empirical model – sedimentation efficiency	154
11.5.	Summary	158
12	The guidelines for the design of industrial sedimentation equipment intended for the processing of coal suspension	159
12.1.	Surface load	159
12.2.	The guidelines for the design of sedimentation devices . .	162
13	Summary	163
	Bibliography	174
	List of Figures	188
	List of Tables	190
