Part I Linear Algebra for Quantum Computing

1	The Most Important Step to Understand Quantum Computing	3
1.1	Learning Outcomes	3
1.2	How to Learn Quantum Computing	3
2	First Impression	5
2.1	Learning Outcomes	5
2.2	What Is Quantum Computing?	5
2.3	Summary	10
	Problems	11
3	Basis, Basis Vectors, and Inner Product	13
3.1	Learning Outcomes	13
3.2	A Romantic Story	13
3.3	Vectors in Quantum Computing	15
3.4	Vector Space	16
3.5	Inner Products of Vectors	17
3.6	Higher Dimensional Vector Space	20
3.7	Summary	21
	Problems	21
4	Orthonormal Basis, Bra–Ket Notation, and Measurement	23
4.1	Learning Outcomes	23
4.2	Orthonormal Basis	23
4.3	Bra–Ket Notation	26
4.4	Quantum Mechanical State, Superposition, and Measurement	28
4.5	Summary	30
	Problems	31
5	Changing Basis, Uncertainty Principle, and Bra–Ket Operations	33
5.1	Learning Outcomes	33
5.2	Basis and Uncertainty Principle	33

5.3	More Bra-ket Operations	37
5.4	Summary	39
5.5	More About Python	39
	Problems	40
6	Observables, Operators, Eigenvectors, and Eigenvalues	43
6.1	Learning Outcomes	43
6.2	Observables and Operators	43
6.3	Eigenvalues and Eigenvectors	45
6.4	Eigenvalues and Eigenvectors Finding and Phase Factor	48
6.5	Remarks on Eigenvectors, Basis, and Measurement	49
6.6	Summary	50
	Problems	51
7	Pauli Spin Matrices, Adjoint Matrix, and Hermitian Matrix	53
7.1	Learning Outcomes	53
7.2	Pauli Spin Matrices	53
7.3	Commutation and Anti-commutation	55
7.4	Spin Operator in Arbitrary Direction	57
7.5	Relationship Between Spin Direction and Real 3D Space	59
7.6	Adjoint and Hermitian Matrices	60
7.7	Summary	61
	Problems	62
8	Operator Rules, Real Eigenvalues, and Projection Operator	63
8.1	Learning Outcomes	63
8.2	Operator Rules in the Bra-ket Notation	63
8.3	Eigenvalues of Hermitian Matrix	66
8.4	Copenhagen Interpretation/Born Rule and Projection Operator ...	67
8.5	Summary	70
	Problems	70
9	Eigenvalue, Matrix Diagonalization and Unitary Matrix	73
9.1	Learning Outcomes	73
9.2	Eigenvalues and Matrix Diagonalization	73
9.3	Unitary Matrix	77
9.4	Summary	79
	Problems	80
10	Unitary Transformation, Completeness, and Construction of Operator	81
10.1	Learning Outcomes	81
10.2	Unitary Transformation	81
10.3	Construction of Unitary Transformation Matrices	84
10.4	Completeness of Basis	85
10.5	Construct Operator from Eigenvalues and Eigenvectors	87
10.6	Summary	88
	Problems	88

11 Hilbert Space, Tensor Product, and Multi-Qubit	89
11.1 Learning Outcomes	89
11.2 Hilbert Space	89
11.3 Expansion of Hilbert Space and Tensor Product	90
11.4 Multi-Qubits	93
11.5 More About Tensor Product in Hilbert Space	95
11.6 Summary	96
Problems	96
12 Tensor Product of Operators, Partial Measurement, and Matrix Representation in a Given Basis	99
12.1 Learning Outcomes	99
12.2 Tensor Product of Vectors in General Form	99
12.3 Tensor Product of Operators	101
12.4 Partial Measurement	104
12.5 Matrix Representation in a Given Basis	105
12.6 Summary	107
Problems	108
Part II Quantum Computing: Gates and Algorithms	
13 Quantum Register and Data Processing, Entanglement, the Bell States, and EPR Paradox	111
13.1 Learning Outcomes	111
13.2 Quantum Register	111
13.3 Quantum Data Processing	114
13.4 Entanglement and Bell States	115
13.5 Einstein–Podolsky–Rosen (EPR) Paradox	118
13.6 Summary	119
Problems	119
14 Concepts Review, Density Matrix, and Entanglement Entropy	121
14.1 Learning Outcomes	121
14.2 Concepts Review Using Entanglement	121
14.3 Pure State, Mixed State, and Density Matrix	125
14.4 Measurement of Entanglement	126
14.5 Summary	128
Problems	129
15 Quantum Gate Introduction: NOT and CNOT Gates	131
15.1 Learning Outcomes	131
15.2 Basic Quantum Gate Properties	131
15.3 NOT (X) Gate	134
15.3.1 Definition	134
15.3.2 Matrix	134
15.3.3 Circuit and Properties	135

15.4	XOR (CNOT) Gate	137
15.4.1	Definition	137
15.4.2	Matrix	137
15.4.3	Circuit and Properties	138
15.5	Summary	139
	Problems	139
16	SWAP, Phase Shift, and CCNOT (Toffoli) Gates	141
16.1	Learning Outcomes	141
16.2	SWAP Gate	141
16.2.1	Definition	141
16.2.2	Matrix	142
16.2.3	Circuit and Properties	142
16.3	Phase Shift Gate	143
16.3.1	Definition	143
16.3.2	Matrix	143
16.3.3	Circuit and Properties	144
16.4	Controlled Phase Shift Gate	145
16.4.1	Definition	145
16.4.2	Matrix	146
16.4.3	Circuit and Properties	146
16.5	Toffoli (CCNOT) Gate	147
16.5.1	Definition	147
16.5.2	Matrix	148
16.5.3	Circuit and Properties	149
16.6	Summary	150
	Problems	150
17	Walsh–Hadamard Gate and Its Properties	153
17.1	Learning Outcomes	153
17.2	Walsh–Hadamard Gate	153
17.2.1	Definition	153
17.2.2	Matrix	154
17.2.3	Circuit	154
17.3	Properties of the Hadamard Gate	155
17.3.1	Inverse of Hadamard Gate	155
17.3.2	Multiple-Qubit Hadamard Gate	156
17.3.3	Properties of n -Qubit Hadamard Gate	157
17.4	Summary	162
	Problems	162
18	Two Quantum Circuit Examples	163
18.1	Learning Outcomes	163
18.2	Quantum Circuit for Rotating Basis	163
18.2.1	Run on IBM-Q	166

18.3	Quantum Circuit for Implementing a SWAP Gate.....	167
18.3.1	Run on IBM-Q.....	170
18.4	Summary.....	170
	Problems	171
19	No-Cloning Theorem and Quantum Teleportation I	173
19.1	Learning Outcomes	173
19.2	No-Cloning Theorem	173
19.3	Quantum Teleportation.....	176
19.3.1	A Simplified Version	176
19.3.2	Measurement in the $ +\rangle / -\rangle$ Basis	179
19.3.3	Run on IBM-Q.....	181
19.4	Summary.....	181
	Problems	182
20	Quantum Teleportation II and Entanglement Swapping	183
20.1	Learning Outcomes	183
20.2	Quantum Teleportation: The Full Version.....	183
20.2.1	Run on IBM-Q.....	186
20.3	Entanglement Swapping	188
20.3.1	Run on IBM-Q.....	191
20.4	Summary.....	192
	Problems	192
21	Deutsch Algorithm	193
21.1	Learning Outcomes	193
21.2	Deutsch Algorithm	193
21.2.1	The Problem	194
21.2.2	Classical Algorithm	195
21.2.3	Quantum Computing Solution	196
21.2.4	The Quantum Circuit	199
21.2.5	Run on IBM-Q.....	201
21.3	Summary.....	202
	Problems	203
22	Quantum Oracles and Construction of Quantum Gate Matrices	205
22.1	Learning Outcomes	205
22.2	Quantum Oracle	205
22.2.1	XOR Quantum Oracle	206
22.2.2	Phase Quantum Oracle	208
22.3	Construction of Quantum Gates and Oracles	209
22.4	Summary.....	213
	Problems	213
23	Grover’s Algorithm: I.....	215
23.1	Learning Outcomes	215
23.2	Grover’s Algorithm.....	215

23.2.1	Computational Complexity	215
23.2.2	The Problem	216
23.2.3	An Overview of Grover's Algorithm	217
23.2.4	Implementation of Grover's Algorithm.....	219
23.2.5	Circuit for Grover's Algorithm.....	223
23.3	Summary.....	223
	Problems	224
24	Grover's Algorithm: II	225
24.1	Learning Outcomes	225
24.2	Numerical Example for Grover's Algorithm.....	225
24.2.1	Construction of Quantum Oracle	226
24.2.2	Construction of the Grover Diffusion Operator	228
24.2.3	Evolution of the Wavefunction.....	229
24.3	Simulation on IBM-Q.....	231
24.4	Implementation Using XOR Quantum Oracle.....	232
24.5	Summary.....	233
	Problems	234
25	Quantum Fourier Transform I	235
25.1	Learning Outcomes	235
25.2	The N -th Root of Unity	235
25.3	Discrete Fourier Transform	237
25.4	Quantum Fourier Transform	240
25.5	Inverse Quantum Fourier Transform	244
25.6	Summary.....	244
	Problems	245
26	Quantum Fourier Transform II	247
26.1	Learning Outcomes	247
26.2	Another Definition of QFT and IQFT	247
26.3	Many-Qubit SWAP Gate.....	249
26.4	QFT Circuit.....	251
26.4.1	Implementation of a 3-Qubit QFT Circuit.....	253
26.5	Implementation of IQFT	254
26.6	General Circuit of QFT	255
26.7	Summary.....	255
	Problems	256
27	Bloch Sphere and Single-Qubit Arbitrary Unitary Gate	257
27.1	Learning Outcomes	257
27.2	Bloch Sphere	257
27.3	Expectation Values of Pauli Matrices	261
27.4	Single-Qubit Arbitrary Unitary Rotation.....	262
27.5	Summary.....	266
	Problems	266

28 Quantum Phase Estimation 267

28.1 Learning Outcomes 267

28.2 General Controlled Unitary Gate 267

28.3 Quantum Phase Estimation 270

28.3.1 QPE for a 2×2 Matrix 270

28.3.2 Implementation on IBM-Q 275

28.3.3 General QPE Circuit..... 275

28.4 Summary..... 276

Problems 277

29 Shor’s Algorithm 279

29.1 Learning Outcomes 279

29.2 Background 279

29.2.1 Encryption 279

29.2.2 Period Finding 280

29.2.3 Prime Integer Factorization 280

29.3 Shor’s Algorithm 282

29.4 Summary..... 287

Problems 287

30 The Last But Not the Least 289

30.1 Learning Outcomes 289

30.2 End of the Beginning..... 289

30.3 Quantum Programming 290

30.4 Next Steps 293

Index..... 295
