Preface	xxiii
Acknowledgments	xxv

Part 1 Preliminaries

1 Introduction	3
1.1 What Is Hydrology?	3
1.2 A Brief History of Hydrology	3
1.2.1 Hydrology in Ancient Times—The Case of India.	5
1.2.2 Development of Hydrology, from 1850 Onward	6
1.2.3 Future Directions.	8
1.3 Why This Book—and Why Now?	9
1.3.1 Who Is the Intended Readership of This Book?	9
1.3.2 Organization of This Book.	9
1.4 Summary	11
1.5 Questions	11
1.6 References.	11
2 The Hydrologic Cycle.	15
2.1 Introduction	15
2.2 Components of the Hydrologic Cycle	17
2.2.1 Atmospheric Component.	18
2.2.2 Surface Components.	18
2.2.3 Importance of the Components of the Hydrologic Cycle.	21
2.3 Scales for the Study of the Hydrologic Cycle	21
2.3.1 Global Scale	22
2.3.2 Catchment Scale	23
2.3.3 Time Scales in the Hydrologic Cycle	23
2.4 Carbon and Nitrogen Cycles and Their Relation with the Hydrologic Cycle	24
2.4.1 Carbon Cycle	24
2.4.2 Nitrogen Cycle.	27
2.4.3 Linkages Among Hydrologic, Carbon, and Nitrogen Cycles.	28
2.5 Influence of Human Activity and Land-Use Changes on the Hydrologic Cycle	28
2.5.1 Effects of Agricultural Changes	29
2.5.2 Effects of Urbanization.	30
2.5.3 Effects of Forest Activities	30

2.5.4	Effects of Structural Changes	30
2.5.5	Changes in Water Quality	31
2.6	Impact of Climate Change on the Hydrologic Cycle.....	31
2.7	Summary	32
2.8	Questions	32
2.9	Activities.....	33
2.10	References.....	33
3	Water Balance.....	35
3.1	Water Balance—The Mathematical Representation of the Hydrologic Cycle	35
3.2	Forms of the Water Balance Equation	36
3.3	Closure of the Water Balance Equation	38
3.4	Global Water Balance	38
3.4.1	Continental Water Balance.....	41
3.4.2	River Basin Water Balance	41
3.4.3	The Impact of Natural and Human-Induced Changes on Water Balance.....	43
3.5	Summary	43
3.6	Questions	43
3.7	References.....	44

Part 2 Hydrologic Components

4	Precipitation and Interception	47
4.1	Precipitation	47
4.2	Cloud Formation.....	47
4.2.1	Classification of Precipitation	48
4.2.2	Cloud Types	48
4.3	Observation of Precipitation	50
4.3.1	Rainfall Measurement	50
4.3.2	Nonrecording Rain Gauges	50
4.3.3	Self-Recording Rain Gauge (SRRG)	51
4.3.4	Tipping-Bucket Rain Gauge.....	52
4.3.5	Precipitation Measurement by Weather Radar.....	52
4.4	Processing of Rainfall Data	54
4.4.1	Internal Consistency Check.....	54
4.4.2	Scrutiny of Precipitation Data by Multiple Time Series Analysis	55
4.4.3	Scrutiny by Statistical Tests	56
4.4.4	Correction and Completion of Rainfall Data	57
4.4.5	Spatial Consistency Check.....	60
4.5	Spatial Averaging of Rainfall Data	61
4.5.1	Arithmetic Average.....	62
4.5.2	Thiessen Polygon Method	62
4.5.3	Isohyetal Method.....	64
4.5.4	Kriging	64

4.6	Estimation of Missing Data	65
4.6.1	Normal Ratio Method	66
4.6.2	Inverse Distance Power Method	67
4.6.3	Relation Between Point and Areal Rainfall	67
4.7	Disaggregation of Rainfall Data	68
4.8	Snow Data	72
4.8.1	Observation of Snow Data	72
4.8.2	Measurement of Snow by Remote Sensing	73
4.9	Regional/Global Meteorological Data Sets	73
4.10	Rainstorm Analysis	74
4.11	Interception	74
4.12	Summary	75
4.13	Questions	75
4.14	References	77
5	Evapotranspiration	79
5.1	Introduction	79
5.1.1	Definitions	79
5.1.2	Evaporation Process	80
5.1.3	Physics of Evaporation	80
5.2	Factors Affecting Evaporation	81
5.2.1	Temperature	81
5.2.2	Processing of Temperature Data	83
5.2.3	Solar Radiation	83
5.2.4	Sunshine Duration	84
5.2.5	Relative Humidity	84
5.2.6	Wind Speed	85
5.2.7	Atmospheric Pressure	86
5.2.8	Water Quality	86
5.2.9	Water Depth and Soil Type	86
5.3	Measurement of Evaporation	87
5.3.1	The U.S. Weather Bureau Class A Land Pan	87
5.3.2	Analysis of Pan Evaporation Data	88
5.3.3	Estimation of Lake Evaporation from Pan Measurements	89
5.4	Determination of Evaporation from Water Bodies	91
5.4.1	Water Budget	91
5.4.2	Energy Budget	92
5.4.3	Combination Method	95
5.5	Transpiration	96
5.6	Evapotranspiration	97
5.6.1	Measurement of Evapotranspiration	98
5.7	Estimation of Evapotranspiration	99
5.7.1	FAO-56 Penman-Monteith Method for the Estimation of ET	99
5.7.2	Bowen Ratio Energy Balance (BREB) Method	100
5.7.3	Limits on Evapotranspiration	102
5.7.4	The Budyko Curve	102

5.8	Reduced-Set Methods for Evapotranspiration Estimation	103
5.8.1	Temperature-Based Evapotranspiration Estimation Methods	103
5.8.2	The Hargreaves-Samani Method	103
5.8.3	The Thornthwaite Method	104
5.8.4	The Blaney-Criddle Method	105
5.9	Radiation-Based Methods	107
5.9.1	The Priestley-Taylor Method	107
5.9.2	The Turc Method	107
5.9.3	The Jensen and Haise Method	108
5.9.4	Reduced-Set PM	109
5.9.5	Comments on Reduced-Set Methods	110
5.10	Emerging Methods for ET Estimation	110
5.10.1	Eddy Covariance Technique	110
5.10.2	Remote Sensing for Measurement of Evaporation and Evapotranspiration	111
5.11	Application of Evapotranspiration in Hydrology	112
5.12	Questions	118
5.13	References	119
6	Infiltration and Soil Moisture	123
6.1	Infiltration Process	123
6.2	Soil and Its Hydrologic Properties	125
6.2.1	Soil Profile	125
6.2.2	Soil Texture	126
6.2.3	Soil Water Content	128
6.3	Soil Water	129
6.3.1	Movement of Soil Water	130
6.3.2	Antecedent Moisture Condition	130
6.4	Measurement of Soil Water Properties	131
6.4.1	Particle Size Distribution	131
6.4.2	Soil Moisture Characteristic Curve	131
6.5	Estimation of Soil Water Properties	132
6.6	Governing Equations of Soil Water Movement	132
6.7	Solving the Richards Equation	135
6.8	Generalized Infiltration Model	135
6.9	Empirical Infiltration Models	139
6.9.1	Kostiakov Model	140
6.9.2	Horton Equation	141
6.9.3	Philip Two-Term Method	141
6.9.4	Green-Ampt Model	142
6.9.5	Green-Ampt Model for Rainfall Infiltration Case	143
6.10	Applications of Infiltration Theory	144
6.11	Questions	144
6.12	References	146

7	Surface Water	149
7.1	Catchments	149
7.1.1	Delineation of Catchments	149
7.1.2	Channel Networks	151
7.2	Hydrographs	154
7.2.1	Elements of Hydrographs	154
7.2.2	Hydrograph Time Characteristics	155
7.3	Components of Streamflow	156
7.3.1	Surface Runoff	156
7.3.2	Interflow	157
7.3.3	Direct Runoff	158
7.3.4	Baseflow	158
7.4	Catchment Response Mechanisms	159
7.4.1	Hydrograph Development: Small Elemental Area	159
7.4.2	Hydrograph Development: Small Natural Catchment	160
7.4.3	Overland Flow Generation	160
7.5	Factors Affecting Runoff	162
7.5.1	Properties of a Rainstorm	162
7.5.2	Topography and Orientation	163
7.5.3	Size and Shape	163
7.5.4	Soils and Geology	164
7.5.5	Land Use and Land Cover	164
7.6	Baseflow Separation	164
7.6.1	Hydrograph Separation	164
7.6.2	Separation Using Digital Filters	165
7.6.3	Chemical and Isotope Techniques	166
7.7	Summary	166
7.8	Questions	166
7.9	References	167
8	Groundwater	169
8.1	Definitions and Notation	169
8.1.1	Groundwater	169
8.1.2	Aquifers	169
8.1.3	Types of Aquifers	170
8.1.4	Confined Aquifer	170
8.1.5	Leaky Aquifer	171
8.1.6	Perched Aquifer	171
8.1.7	Water Table	171
8.1.8	Phreatic Surface	171
8.1.9	Groundwater Basin	171
8.1.10	Recharge Area	171
8.1.11	Porosity	171
8.1.12	Void Ratio	173
8.1.13	Permeability	174
8.1.14	Hydraulic Conductivity	174

8.1.15	Anisotropy and Heterogeneity	174
8.1.16	Transmissivity	175
8.1.17	Specific Yield	175
8.1.18	Specific Retention	176
8.1.19	Compressibility and Effective Stress	176
8.1.20	Specific Storage	177
8.1.21	Storativity	177
8.1.22	Hydraulic Diffusivity	179
8.2	Geologic Formations	179
8.2.1	Unconsolidated Rocks	179
8.2.2	Semiconsolidated Rocks	179
8.2.3	Consolidated Rocks	180
8.2.4	Geologic Controls	180
8.2.5	Formations as Aquifers	181
8.3	Groundwater Flow Equations	181
8.3.1	Darcy's Law	181
8.3.2	Continuity Equation	183
8.3.3	Governing Equations	184
8.3.4	Governing Equations for Confined Aquifers	184
8.3.5	Governing Equations for Unconfined Aquifers	185
8.3.6	Well Hydraulics	188
8.3.7	Recharge and Groundwater Runoff	198
8.3.8	Stream-Aquifer Interaction	200
8.4	Summary	203
8.5	Questions	203
8.6	References	206
9	Water Quality	207
9.1	Introduction	207
9.2	Sources of Contaminants	208
9.3	Quality of Water	208
9.4	Chemical Contaminants	209
9.5	Surface Water Quality	209
9.6	Subsurface Water Quality	210
9.7	Characteristics of Water Quality	210
9.7.1	Units of Measurement	211
9.7.2	Chemical Relationships	212
9.7.3	Physical Characteristics	214
9.7.4	Chemical Characteristics	217
9.7.5	Biological Characteristics	219
9.8	Analytical Concepts	220
9.8.1	Biochemical Oxygen Demand	222
9.8.2	Nitrification	224
9.8.3	Denitrification	225
9.8.4	Oxygen Depletion	226
9.8.5	Reoxygenation Coefficient	229
9.8.6	Deoxygenation Coefficient	231

9.9	Nonpoint Source Pollution	231
9.9.1	Pollutants in Urban Runoff	231
9.9.2	Pollutants in Agricultural Runoff	231
9.9.3	Pollution in Subsurface Waters	232
9.10	Water Quality Management	232
9.11	Summary	232
9.12	Questions	232
9.13	References.....	233

Part 3 Measurements

10	Hydrologic Data Observation Networks	237
10.1	Hydrometeorological Data Networks	237
10.1.1	Types of Hydrometeorological Networks	238
10.1.2	Steps in Network Design	239
10.1.3	Assessment of Data Needs	240
10.2	Integration of Networks	241
10.3	Precipitation Data Networks.....	242
10.3.1	Design of Optimal Rain Gauge Network	242
10.3.2	C_p -Based Technique.....	243
10.3.3	Location of Rain Gauge Stations.....	244
10.4	Networks for Other Hydrometeorological Data	245
10.5	River Gauging Networks	246
10.5.1	Design of River Gauging Networks	247
10.5.2	Evaluation of Networks	248
10.5.3	Site Selection Surveys	249
10.5.4	Hydraulic Engineering for Selection of Sites for River Gauging Stations.....	249
10.5.5	General Considerations About River Gauging Networks	252
10.6	Groundwater Monitoring Networks	254
10.7	Water Quality and Sediment Measuring Stations	254
10.8	International Standards for Hydrometry	255
10.9	Reference Climate and Water Data Networks	255
10.9.1	Global Climate Networks	256
10.9.2	Country-Level Networks	257
10.9.3	U.S. Climate Reference Network	257
10.9.4	Reference Climatological Stations in the United Kingdom	258
10.10	Recent Advances in Hydrometry	258
10.11	Summary	259
10.12	Questions	259
10.13	References.....	260
11	Streamflow Measurement	263
11.1	River Stage and Discharge.....	263
11.1.1	Station Control	264

11.2	Measurement of River Stages	264
11.2.1	Manual Means to Measure River Stages	264
11.2.2	Direct Depth Sounding	266
11.2.3	Water Level Recorder	266
11.2.4	Radar Water Level Measurement	268
11.3	Measurement of Discharge	268
11.3.1	Direct Determination of Discharge	268
11.3.2	Velocity-Area Methods	268
11.3.3	Measurement of Velocity	269
11.3.4	Moving Boat Method	272
11.4	Computation of Discharge	273
11.4.1	Indirect Methods of Discharge Determination	273
11.4.2	Estimation of Discharge by the Slope-Area Method ...	273
11.5	Estimation of Discharge by Using Artificial Structures	276
11.6	Advanced Discharge Measurement Techniques	278
11.6.1	Dilution Methods for Measuring Discharge	278
11.6.2	Acoustic Doppler Current Profiler	279
11.7	Streamflow Measurement Under Difficult Conditions	280
11.8	Stage-Discharge Rating Relationship	281
11.8.1	Simple Rating Curve	281
11.8.2	Compound Rating Curve	282
11.8.3	Hysteresis in Rating Curves	285
11.8.4	Extrapolation of Rating Curves	286
11.9	New Techniques for Development of Stage-Discharge Relation	287
11.9.1	Entropy	288
11.9.2	Uncertainty in Rating Curves	288
11.10	Summary	288
11.11	Questions	289
11.12	References	290
12	Remote Sensing and Geographic Information Systems	293
12.1	Remote Sensing	293
12.1.1	Components of a Remote Sensing System	296
12.1.2	Remote Sensing Sensors	296
12.1.3	Resolution of Remote Sensing Data	297
12.1.4	Reflectance Characteristics of Earth Features	299
12.1.5	Remote Sensing Platforms	300
12.2	Remote Sensing Data Analysis	301
12.2.1	Steps in Digital Image Processing	301
12.2.2	Spectral Indices	304
12.2.3	Change Detection	305
12.3	Selected Space Programs	305
12.4	Geographic Information Systems	306
12.4.1	Geographic Data Types	307
12.4.2	GIS Data Structure	309
12.4.3	Geographic Coordinate Systems	311

12.5	GIS-Based Analysis of Spatial Data	312
12.5.1	Digital Elevation Model	313
12.5.2	Analysis of Geographic Data Using a GIS	314
12.6	Applications of Remote Sensing and Geographical Information Systems to Water Resources Problems	316
12.7	Summary	317
12.8	Questions	317
12.9	References	318

Part 4 Analysis and Modeling

13	Rainfall-Runoff Modeling.	321
13.1	Computation of Hydrograph Volume	321
13.1.1	Regression Method	321
13.1.2	Simple Linear Regression	322
13.1.3	Nonlinear Regression	323
13.1.4	Multiple Regression	325
13.1.5	Stepwise Regression	327
13.2	Soil Conservation Service–Curve Number Method	327
13.2.1	Curve Number Estimation	328
13.2.2	SCS Land Cover Complex Classification	328
13.2.3	SCS Soil Group Classification	330
13.2.4	Antecedent Soil Moisture Condition	330
13.2.5	Major Strengths and Weaknesses of SCS-CN Methodology	333
13.3	Estimation of Peak Discharge	334
13.3.1	Rational Formula	334
13.3.2	Peak Discharge–Volume Relation	337
13.4	Rainfall-Runoff Relationship for Different Durations	337
13.4.1	Daily Rainfall-Runoff Relationship	337
13.4.2	Monthly Rainfall-Runoff Relationships (Rain-Fed Catchments)	338
13.4.3	Regression Models for Seasonal Rivers	339
13.4.4	Filling in Missing Data	339
13.4.5	Comments on Regression	339
13.5	Models for Estimating a Hydrograph	340
13.6	Soil Erosion and Sediment Yield	340
13.7	Snowmelt Runoff Modeling	342
13.7.1	Temperature Index Method	342
13.7.2	Energy Balance	343
13.8	Summary	344
13.9	Questions	344
13.10	References	345
14	Unit Hydrograph Models	347
14.1	Introduction	347
14.2	Factors Affecting Unit Hydrograph Shape	349

14.3	Derivation of a Unit Hydrograph	350
14.3.1	Using Data of a Single-Peak Storm	350
14.3.2	Derivation of Unit Hydrograph from Data of Multiperiod Storm	353
14.4	Instantaneous Unit Hydrograph	354
14.4.1	S-Curve Hydrograph	356
14.5	Change of Unit Period of Unit Hydrograph	360
14.5.1	Superimposition Method	360
14.5.2	S-Curve Method	362
14.5.3	Relation Between S-Curve and Unit Hydrograph ...	364
14.6	Synthetic Unit Hydrograph	364
14.6.1	The Snyder Method	364
14.6.2	Soil Conservation Service Dimensionless Hydrograph ..	366
14.7	Conceptual Models of UH Derivation	368
14.7.1	Linear Reservoir Concept	368
14.7.2	Nash Model	369
14.7.3	Dooge Model	371
14.7.4	Geomorphological Instantaneous Unit Hydrograph ..	372
14.8	Summary	373
14.9	Questions	373
14.10	References	374
15	Flow Routing	377
15.1	Introduction	377
15.2	Muskingum Method of Channel Routing	378
15.2.1	Parameter Estimation and Interpretation	380
15.2.2	Routing Procedure	382
15.2.3	Accounting for Lateral Inflow	383
15.3	The Saint-Venant Equations	383
15.3.1	Solution of Saint-Venant Equations	384
15.3.2	Implicit Methods of Solving Saint-Venant Equations ..	385
15.3.3	Kinematic Wave Modeling	388
15.3.4	Application of KW Theory	392
15.3.5	Diffusion Waves	392
15.4	Muskingum-Cunge Method	393
15.4.1	Estimation of Muskingum-Cunge Parameters	395
15.4.2	Flood Routing by the Muskingum-Cunge Method ...	396
15.4.3	Advantages and Limitations of the Muskingum-Cunge Method	397
15.5	Muskingum Method and Diffusion Wave Approximation ...	398
15.5.1	Kinematic Wave Approximation and Muskingum Method	400
15.5.2	Another Kinematic Approximation Through Numerical Integration	402
15.5.3	Diffusion Wave Approximation	404

15.6	Reservoir Routing	405
15.6.1	Reservoir Routing Techniques	405
15.6.2	Modified Puls Method	406
15.6.3	Mass Curve Method	408
15.6.4	Reservoir Routing with Controlled Outflow	410
15.6.5	Major Applications of Storage Routing	410
15.6.6	General Observations on Reservoir Routing	411
15.7	Summary	412
15.8	Questions	412
15.9	References	413
16	Pollutant Modeling	415
16.1	Elements of Transport Process	415
16.1.1	Advection	415
16.1.2	Dispersion and Diffusion	416
16.1.3	Adsorption and Desorption	417
16.1.4	Growth and Decay	418
16.1.5	Volatilization	418
16.1.6	Dissolution-Precipitation	419
16.2	Transformation of Pollutants in the Environment	419
16.3	Elements of Pollutant Modeling	419
16.4	Pollutant Transport in Urban Watersheds	420
16.5	Pollutant Transport in Agricultural Runoff	422
16.6	Pollutant Transport in Streams	423
16.7	Pollutant Transport in Unsaturated Flow	426
16.8	Pollutant Transport in Groundwater	426
16.9	Numerical Solution of Convective (or Kinematic Wave) Approximation	427
16.10	Another Numerical Solution of Convective (Kinematic Wave) Approximation	428
16.11	Solution by Numerical Integration	429
16.12	Modeling of Dissolved Oxygen in Streams	430
16.12.1	Model Formulation	431
16.12.2	Numerical Solution	431
16.13	Summary	433
16.14	Questions	433
16.15	References	435
17	Environmental Flows	437
17.1	Ecohydrology	437
17.1.1	River Health	438
17.1.2	River Health Assessment Tools	439
17.2	Trade-Off Between Development and Conservation	440
17.3	Environmental Flows	440
17.3.1	Definition of Environmental Flows	441
17.3.2	Typical Stages of an Environmental Flow Assessment	443

17.3.3	Objectives and Factors Governing Environmental Flows.....	443
17.3.4	Locations and Reasons for Estimation of Environmental Flows	444
17.4	Methodologies to Assess Environmental Flow Requirements.....	444
17.4.1	Hydrological Methods	444
17.4.2	Range of Variability Approach	446
17.4.3	Hydrology- and Hydraulics-Based Methods	446
17.4.4	Hydraulic Rating Methods	447
17.4.5	Hydrobiology Methods	447
17.4.6	Building Block Methodology	448
17.4.7	Ecological Limits of Hydrologic Alteration	449
17.4.8	Habitat Simulation Methods	449
17.4.9	Methodology for Environmental Flow Assessment.....	450
17.4.10	Sediment Aspects	450
17.5	Implementation of Environmental Flows	451
17.6	Summary	452
17.7	Questions	452
17.8	References	453

Part 5 Hydrologic Design

18	Statistical Analysis of Hydrological Data.....	457
18.1	Basic Concepts.....	457
18.1.1	Probability	458
18.1.2	Properties of a Random Variable	458
18.1.3	Outliers	460
18.2	Key Statistical Measures of Data.....	460
18.2.1	Central Tendency	460
18.2.2	Measure of Dispersion or Spread	462
18.2.3	Measures of Symmetry.....	463
18.3	Graphical Presentation of Data.....	464
18.3.1	Box Plots.....	465
18.3.2	Quantiles.....	467
18.3.3	Quartiles	467
18.3.4	Return Period.....	468
18.4	Probability Distributions	468
18.4.1	Normal or Gaussian Distribution.....	469
18.4.2	Log-Normal Distribution.....	470
18.4.3	Extreme Value Type 1 Distribution	471
