	<i>Preface</i>	<i>page xi</i>
1	Introduction	1
	1.1 Finite Element Analysis and Its Procedure	1
	1.2 A Brief History of the Finite Element Method	7
	1.3 FEA Applications, Software, and Trend	9
	1.4 Major FEA Codes	13
	<i>References</i>	14
2	Mathematical Preliminaries	16
	2.1 Overview	16
	2.2 Vector and Matrix Algebra	16
	2.3 Vector Calculus	30
	2.4 Taylor Series Expansion	33
	2.5 Integration by Parts	34
	2.6 Divergence Theorem	36
	2.7 Fundamentals of Variational Calculus	36
	2.8 Summary	48
	2.9 Problems	48
	<i>References</i>	51
3	Numerical Analysis Methods	52
	3.1 Overview	52
	3.2 Numerical Interpolation and Approximation	52
	3.2.1 Lagrange Interpolation	53
	3.2.2 Hermite Interpolation	61
	3.2.3 Piecewise Polynomial Interpolation	64
	3.3 Numerical Differentiation	66
	3.4 Numerical Integration	69
	3.5 Systems of Linear Equations	76
	3.6 Summary	79
	3.7 Problems	80
	<i>References</i>	82

4	General Procedure of FEA for Linear Static Analysis: 1-D Problems	84
4.1	Overview	84
4.2	General Procedure of FEA for Linear Static Analysis	84
4.3	1-D Elasticity	86
4.3.1	A One-Dimensional Axially Loaded Elastic Bar	86
4.3.2	Computer Implementation	111
4.4	1-D Steady State Heat Transfer	126
4.4.1	Steady State Heat Transfer in a 1-D Rod	126
4.4.2	Computer Implementation	136
4.5	1-D Fluid Flow	139
4.5.1	Steady State Mass Transport by 1-D Fluid Flow	140
4.5.2	Computer Implementation	146
4.6	Summary	149
4.7	Problems	150
	<i>References</i>	154
5	FEA for Multi-Dimensional Scalar Field Problems	155
5.1	Overview	155
5.2	2-D Steady State Heat Transfer	155
5.2.1	Steady State Heat Transfer in a Two-Dimensional Plate	155
5.2.2	Computer Implementation	210
5.3	3-D Steady State Heat Transfer	216
5.3.1	3-D Heat Transfer in a Heat Sink	217
5.3.2	Computer Implementation	235
5.4	Numerical Issues and Performance Considerations	239
5.4.1	Convergence Considerations	240
5.4.2	The Patch Test	243
5.4.3	Element Quality	244
5.5	Further Considerations	246
5.6	Summary	247
5.7	Problems	249
	<i>References</i>	258
6	Mesh Generation	259
6.1	Overview	259
6.1.1	Geometric Modeling of Objects	260
6.1.2	2-D Meshing Methods	262
6.2	Modeling of 2-D Geometries Using Planar Straight Line Graph	266
6.3	Delaunay Triangulation and Refinement Meshing	268
6.3.1	Delaunay Triangulation	269
6.3.2	Delaunay Refinement	275
6.4	Computer Implementation	282
6.4.1	Data Structures	283

6.4.2	Auxiliary Geometry Operations	294
6.4.3	Meshing Functions	299
6.5	Summary	315
6.6	Problems	315
	<i>References</i>	318
7	FEA for Multi-Dimensional Vector Field Problems	319
7.1	Overview	319
7.2	2-D Elasticity	319
7.2.1	Linear Elasticity: A Brief Review	320
7.2.2	2-D Elasticity: Thin Plate Subject to External Loads	330
7.2.3	Computer Implementation	360
7.3	3-D Elasticity	363
7.3.1	3-D Elastic Structure Subjected to External Loads	363
7.3.2	Computer Implementation	373
7.4	2-D Steady State Incompressible Viscous Flow	378
7.4.1	2-D Steady State Cavity Driven Flow	378
7.4.2	Computer Implementation	388
7.5	Summary	394
7.6	Problems	395
	<i>References</i>	404
8	Structural Elements	405
8.1	Overview	405
8.2	Trusses	405
8.2.1	3-D Truss System Subjected to External Loads	406
8.2.2	Computer Implementation	416
8.3	Beams and Space Frames	419
8.3.1	3-D Space Frame Structure Subjected to External Loads	419
8.3.2	Computer Implementation	435
8.4	Plates	438
8.4.1	Kirchhoff Plates Subjected to External Loads	438
8.4.2	Computer Implementation	452
8.5	Summary	456
8.6	Problems	456
	<i>References</i>	462
9	FEA for Linear Time-Dependent Analysis	463
9.1	Overview	463
9.2	2-D Transient Heat Transfer	463
9.2.1	Transient Heat Transfer in a Square Plate	464
9.2.2	Computer Implementation	474
9.3	Elastodynamics	480

9.3.1	Vibration and Dynamic Response of Continuum Structures	480
9.3.2	Computer Implementation	494
9.4	Summary	499
9.5	Problems	500
	<i>Index</i>	506
