

Contents

1	Materials for Electronics	1
1.1	Electronics and Condensed Matter Physics	1
1.2	Atomic Bonding	3
1.3	Crystalline Materials	6
1.3.1	Crystal Lattices	6
1.3.2	Simple Crystalline Structures	9
1.4	Materials for Electronic Devices	11
1.4.1	Single Crystals	11
1.4.2	Ceramics and Glasses	14
1.4.3	Polymers	15
1.4.4	Liquid Crystals	16
1.4.5	Thin Films and Multilayers	17
1.4.6	Graphene, Carbon Nanotubes, and 2D Materials	20
	Problems	22
	Further Reading	23
2	Waves and Particles in Matter	25
2.1	Electromagnetic Waves	25
2.2	Elastic Waves in Solids	31
2.3	Photoelectric Effect: Waves and Particles	36
2.4	The Electron as a Wave: Uncertainty Principle	41
2.5	Phonons and Other Elementary Excitations in Solids	45
	Problems	46
	Further Reading	49
3	Quantum Mechanics: Electrons in the Atom	51
3.1	The Postulates of Quantum Mechanics	51
3.1.1	The Wave Function	52
3.1.2	Quantum Operators	53
3.1.3	Expectation Value of a Quantity	55
3.1.4	The Schrödinger Equation	56
3.2	The Time-Independent Schrödinger Equation	56

3.3	Simple Applications of Quantum Mechanics	58
3.3.1	Free Electron	58
3.3.2	Particle in an Infinite Square-Well Potential	61
3.3.3	Potential Barrier: Tunnel Effect	65
3.4	Electron in the Hydrogen Atom	70
3.5	Atoms with Many Electrons	80
	Problems	82
	Further Reading	84
4	Electrons in Crystals	85
4.1	Energy Bands in Crystals	85
4.2	Conductors, Insulators and Semiconductors	91
4.3	Effective Mass	93
4.4	Electron Behavior at $T > 0$: The Fermi-Dirac Distribution	95
4.5	The Mechanism of Electric Current in Metals	101
	Problems	106
	Further Reading	107
5	Semiconductor Materials	109
5.1	Semiconductors	109
5.2	Electrons and Holes in Intrinsic Semiconductors	113
5.2.1	Effective Mass of Electrons and Holes	113
5.2.2	Creation and Recombination of Electron-Hole Pairs	115
5.2.3	Concentrations of Carriers in Thermal Equilibrium	117
5.3	Extrinsic Semiconductors	124
5.3.1	Impurity Energy Levels in a Crystal	125
5.3.2	Carrier Concentrations in Extrinsic Semiconductors	127
5.4	Dynamics of Electron and Holes in Semiconductors	132
5.4.1	Conduction Current	133
5.4.2	Motion in a Magnetic Field: Hall Effect	137
5.4.3	Diffusion Current	139
5.4.4	Injection of Carriers: Diffusion with Recombination	144
	Problems	148
	Further Reading	151
6	Semiconductor Devices: Diodes	153
6.1	The p - n Junction	153
6.1.1	Fabrication of p - n Junctions	154
6.1.2	The Potential Barrier at the p - n Junction	155
6.1.3	Charge and Field at the Junction in Equilibrium	160
6.2	Current in the Biased Junction: I - V Characteristics	164
6.3	Heterojunctions	170
6.3.1	Metal-Semiconductor Junction	172

6.3.2	Heterojunctions of Semiconductors	173
6.4	The Junction Diode	175
6.4.1	Applications of Diodes	179
6.5	Schottky Barrier Diode	181
6.6	Breakdown in Reverse Bias: Zener Diode	182
6.7	Other Types of Diodes	185
6.7.1	Varactor	185
6.7.2	Tunnel Diode	185
6.7.3	IMPATT Diode	188
6.7.4	Gunn Diode	189
	Problems	191
	Further Reading	194
7	Transistors and Other Semiconductor-Based Devices	195
7.1	The Transistor	195
7.2	The Bipolar Transistor	197
7.3	Currents in the Bipolar Transistor	202
7.3.1	Calculation of Currents in the One-Dimensional Model	202
7.3.2	Base Current and Transistor Parameters	208
7.3.3	The I-V Characteristic Curves	212
7.4	Applications of Transistors	215
7.5	Field-Effect Transistors	217
7.5.1	The Junction Field-Effect Transistor	218
7.5.2	The I-V Characteristics of the JFET	219
7.5.3	The Metal-Semiconductor Field-Effect Transistor	224
7.6	Metal-Oxide-Semiconductor Field-Effect Transistor (MOSFET)	226
7.6.1	The MOS Capacitor	227
7.6.2	The Threshold Inversion Voltage	232
7.6.3	The I-V Characteristics of the MOSFET	235
7.6.4	Applications of MOSFETs	238
7.7	Power Control Devices: Thyristors	241
7.7.1	The Silicon-Controlled Rectifier- SCR	241
7.7.2	The TRIAC	244
7.8	Integrated Circuits	245
7.8.1	Basic Concepts and Manufacturing Techniques	246
7.8.2	Semiconductor Memory Devices	250
	Problems	257
	Further Reading	259
8	Optoelectronic Materials and Devices	261
8.1	Optical Properties of Materials	261
8.1.1	Electromagnetic Waves in Materials	263
8.1.2	Reflectivity of Materials	266
8.2	Interaction of Radiation with Matter: Classical Model	269

8.2.1	Contribution of Free Electrons in Metals	270
8.2.2	Contribution of Bound Electrons	274
8.3	Quantum Theory of the Radiation-Matter Interaction	279
8.3.1	Transitions Between Discrete Levels	280
8.3.2	Light Absorption and Luminescence	282
8.3.3	Absorption and Emission of Light in Insulators and Semiconductors	285
8.3.4	Absorption and Emission of Light in Crystals with Impurities	291
8.4	Photodetectors	293
8.4.1	Photoresistors	295
8.4.2	Photodiodes	298
8.4.3	Solar Cells	303
8.4.4	CCD Image Sensor	305
8.5	Light Emitting Diodes (LED)	308
8.6	Stimulated Emission and Lasers	313
8.6.1	The Mechanism of Amplification by Stimulated Emission	314
8.6.2	Solid-State Lasers	317
8.6.3	Gas Lasers	321
8.7	Semiconductor Lasers	322
8.7.1	The p-n Junction Diode Laser	323
8.7.2	Heterojunctions Lasers	326
8.7.3	Quantum-Well and Quantum-Cascade Lasers	330
8.8	Some Applications of Semiconductor Lasers and Other Types of Lasers	334
8.8.1	Optical Communications	334
8.8.2	Recording and Playback on Compact Discs	338
8.8.3	Other Types of Lasers	340
	Problems	342
	Further Reading	343
9	Magnetism, Magnetic Materials, and Devices	345
9.1	Magnetism and Magnetic Materials	345
9.2	Magnetic Properties of Materials	349
9.2.1	Origin of the Magnetic Moment of Electrons	349
9.2.2	Magnetic Moment of Atoms and Ions	351
9.2.3	Paramagnetism	354
9.3	Magnetic Materials	358
9.3.1	Spontaneous Magnetization and Curie Temperature	358
9.3.2	The Molecular Field Model	359
9.3.3	The Exchange Interaction	362
9.3.4	Ferrimagnetic Materials and Ferrites	364
9.3.5	Magnetization Curve: Magnetic Domains	367

9.4	Materials for Conventional Applications	371
9.4.1	Permanent Magnets	372
9.4.2	High Permeability Materials	376
9.5	Magnetic Recording	379
9.5.1	Basic Concepts	380
9.5.2	Quantitative Analysis of Magnetic Recording	383
9.5.3	Materials for Recording	388
9.5.4	Spintronic Technologies for Magnetic Memories	390
9.6	Magnetic Devices for Microwave Circuits	397
9.6.1	The Magnetization Precession Motion	397
9.6.2	Dynamic Susceptibility of Ferrites	399
9.6.3	Electromagnetic Waves in Ferrites	402
9.6.4	Microwave Ferrite Devices	407
9.7	Magnonics: Concepts and Perspectives for Device Applications	413
	Problems	417
	Further Reading	419
10	Other Important Materials for Electronics	421
10.1	Dielectric Materials	421
10.1.1	Polarization of Materials	422
10.1.2	Capacitors	425
10.1.3	Piezoelectric Materials	428
10.1.4	Ferroelectric Materials	433
10.1.5	Electrets	435
10.2	Dielectric Materials for Optoelectronics and Photonics	437
10.2.1	Electro-optic and Elasto-optic Effects	437
10.2.2	Nonlinear Optical Materials	440
10.2.3	Electro-optical Waveguide Devices	441
10.3	Materials for Video Displays	445
10.3.1	Phosphorescent Ceramic Materials	445
10.3.2	Liquid Crystals	452
10.3.3	Organic Conducting Materials	456
10.3.4	Touch-Sensitive Screens	462
10.4	Superconducting Materials	463
10.4.1	Magnetic Properties of Superconductors	465
10.4.2	The Physics of Superconductivity	469
10.4.3	Junctions with Superconductors	474
10.4.4	Some Established Applications of Superconductors	476
10.4.5	Superconducting Devices for Quantum Computing	478
	Problems	482
	Further Reading	483

Appendix A 485

Appendix B 489

Appendix C 491
