

Table of Contents

Preface.....	xi
1	Introduction
1.1	Historical Background.....1
1.2	Scope of the Book8
2	Fundamentals of Elastic Waves in Anisotropic Media
2.1	Waves in Homogeneous Elastic Media: Formulation of Field Equations 11
2.2	Plane Waves in a Homogeneous Anisotropic Medium 20
2.3	Numerical Results and Discussion 33
3	Periodic Layered Media
3.1	Introduction 37
3.2	Description of the Problem 38
3.3	Numerical Results 51
3.4	Remarks..... 56
4	Guided Waves in Fiber-Reinforced Composite Plates
4.1	Introduction 64
4.2	Governing Equations 64
4.3	Numerical Results 76
4.4	Application to Materials Characterization..... 85
4.5	Thin Layers 88
4.6	Guided Waves in Plates with Thin Coating and Interface Layers..... 98
4.7	Transient Response due to a Concentrated Source of Excitation 114
4.8	Laminated Plate with Interface Layers..... 142
4.9	Remarks..... 146
4.10	Laser-Generated Thermoelastic Waves 147
4.11	Results for Thermoelastic Dispersion and Laser-Generated Waves..... 157

5	Wave Propagation in Composite Cylinders	
5.1	Introduction	165
5.2	Governing Equations	166
5.3	Analytical Solution for Transversely Isotropic Composite Cylinder	168
5.4	Stiffness Method I	174
5.5	Stiffness Method II	179
5.6	Numerical Results—Circular Cylinder.....	181
5.7	Guided Waves in a Cylinder of Arbitrary Cross Section	186
5.8	Numerical Results—Cylinder with Rectangular and Trapezoidal Cross Sections	195
5.9	Harmonic Response of a Composite Circular Cylinder due to a Point Force	205
5.10	Forced Motion of Finite-Width Plate	213
6	Scattering of Guided Waves in Plates and Cylinders	
6.1	Introduction	223
6.2	Scattering in a Plate.....	224
6.3	Scattering in a Pipe.....	257
	Appendix A: Computer Programs	
A.1	Programs.....	283
A.2	Executing Programs.....	286
	References	289
	Index	313
